GAM3666 FPRL1 CTACTTGTTCCTCTC FPRL1 (Accession NM_001462.1) is another GAM3666 target gene. B A

ACCTCAA FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3666 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3666 is therefore inhibition of FPRL1. Accordingly, utilities of GAM3666 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM3691 BACE2 CTGGGCTCTGGTCTG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TAGGTTT NM_138991.1) is a GAM3691 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3691 is therefore inhibition of BACE2, a GAM3691 target gene which cleaves intracellularly the b- secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM3691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM3691 TNF CTGGGCTCTGGTCTG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

TAGGTTT Accession NM_000594.2) is another GAM3691 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3691 is therefore inhibition of TNF, a GAM3691 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM3691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM3691 ABCD1 ATGACCTGCAGTCAG ABCD1 (Accession NM_000033.2) is another GAM3691 target gene. B A

GGCCCAG ABCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3691 is therefore inhibition of ABCD1. Accordingly, utilities of GAM3691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM3747 A2M TGGCACAGATCAGCA Alpha- 2- macroglobulin (A2M, Accession NM_000014.3) is a A A

GAACAGG GAM3747 target gene. A2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by A2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of A2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3747 is therefore inhibition of A2M, a GAM3747 target gene which inhibit all four classes of proteinases and therefore is associated with Alzheimer. Accordingly, utilities of GAM3747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with A2M.The function of A2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1653.

GAM3747 BACE2 TGGCACAGATCAGCA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GAACAGG NM_138991.1) is another GAM3747 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3747 is therefore inhibition of BACE2, a GAM3747 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM3747 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM3747 A A DSCR1 TGGCACAGATCAGCA GAACAGG Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is another GAM3747 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3747 is therefore inhibition of DSCR1, a GAM3747 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM3747 A A OGDH TGGCACAGATCAGCA GAACAGG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM3747 target gene. OGDH BINDING SITE1 and OGDH BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by OGDH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE1 and OGDH BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM3747 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3747 is therefore inhibition of OGDH, a GAM3747 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3747 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM3768 A A CASP3 ATGAGAGTAGGAGTT TGGGCTC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_004346.2) is a GAM3768 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3768 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3768 is therefore inhibition of CASP3, a GAM3768 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3768 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM3768 IGF1 ATGAGAGTAGGAGTT TGGGCTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM3768 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3768 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3768 is therefore inhibition of IGF1, a GAM3768 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM3768 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM3768 MAPT ATGAGAGTAGGAGTT TGGGCTC Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM3768 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3768 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3768 is therefore inhibition of MAPT, a GAM3768 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3768 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has

been established by previous studies, as described hereinabove with reference to GAM144.

GAM3781 BCHE TTCTGTGCAGGTTAA A A
CATTTCT
BCHE (Accession NM_000055.1) is a GAM3781 target gene. BCHE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3781 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3781 is therefore inhibition of BCHE. Accordingly, utilities of GAM3781 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM3781 TNF TTCTGTGCAGGTTAA A A
CATTTCT
Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM3781 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3781 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3781 is therefore inhibition of TNF, a GAM3781 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM3781 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM3788 DHCR24 TCACTTGCCTAGGGT A A
CACACAG
24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM3788 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3788 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3788 is therefore inhibition of DHCR24, a GAM3788 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3788 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM44.

GAM3788 IGF1 TCACTTGCCTAGGGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CACACAG NM_000618.2) is another GAM3788 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3788 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3788 is therefore inhibition of IGF1, a GAM3788 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM3788 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM3788 PSEN2 TCACTTGCCTAGGGT PSEN2 (Accession NM_012486.1) is another GAM3788 target gene.
A A
CACACAG PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3788 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3788 is therefore inhibition of PSEN2. Accordingly, utilities of GAM3788 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM3810 ADAMTS5 TGGAGAGAAAGCGAA A Disintegrin- like and Metalloprotease (reprolysin type) with A A
GATGTAG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM3810 target gene. ADAMTS5 BINDING SITE1 and ADAMTS5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ADAMTS5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE1 and ADAMTS5 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM3810 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3810 is therefore inhibition of ADAMTS5, a GAM3810 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3810 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM3810 CTSK TGGAGAGAAAGCGAA A A GATGTAG CTSK (Accession NM_000396.2) is another GAM3810 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3810 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3810 is therefore inhibition of CTSK. Accordingly, utilities of GAM3810 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM3810 IGF1 TGGAGAGAAAGCGAA A A GATGTAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM3810 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM3810 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3810 is therefore inhibition of IGF1, a GAM3810 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM3810 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM3890 ACE GGTCCACAAGGGGAG A A AGCAGGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM3890 target gene. ACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3890 is therefore inhibition of ACE, a

GAM3890 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM3890 ADAMTS5 GGTCCACAAGGGGAG A Disintegrin- like and Metalloprotease (reprolysin type) with A A
AGCAGGG Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM3890 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of ADAMTS5, a GAM3890 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM3890 CLU GGTCCACAAGGGGAG Clusterin (complement lysis inhibitor, SP- 40,40, sulfated A A
AGCAGGG glycoprotein (CLU, Accession NM_001831.1) is another GAM3890 target gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of CLU, a GAM3890 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM3890 CTSK GGTCCACAAGGGGAG CTSK (Accession NM_000396.2) is another GAM3890 target gene. A A
AGCAGGG CTSK BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of CTSK. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM3890 DLST GGTCCACAAGGGGAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

AGCAGGG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM3890 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of DLST, a GAM3890 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM3890 GFAP GGTCCACAAGGGGAG GFAP (Accession NM_002055.2) is another GAM3890 target gene. A A

AGCAGGG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of GFAP. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM3890 MAPT GGTCCACAAGGGGAG Microtubule- associated Protein Tau (MAPT, Accession A A

AGCAGGG NM_173727.1) is another GAM3890 target gene. MAPT BINDING SITE1 through MAPT BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by

MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 through MAPT BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of MAPT, a GAM3890 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM3890 MT3 GGTCCACAAGGGGAG Metallothionein 3 (MT3, Accession NM_005954.1) is another A A AGCAGGG GAM3890 target gene. MT3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MT3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of MT3, a GAM3890 target gene which inhibits survival and neurite formation of cortical neurons in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MT3.The function of MT3 has been established by previous studies. Uchida et al. (1991) identified a growth inhibitory factor in human brain and purified it to homogeneity. It was found to be a 68- amino acid protein with high homology to the metallothioneins (see OMIM Ref. No. 156350). The central domain of GIFB, amino acid residues 11- 39, showed the highest homology to MT2A (OMIM Ref. No. 156360). There were, however, 3- bp and 18- bp insertions in the coding sequence for the amino- terminal and carboxy- terminal domains, respectively, in comparison with MT2A. Such insertions had, it seemed, never been observed in vertebrate metallothioneins. By Southern blot analysis of somatic cell hybrids, Tsuji et al. (1992) determined that, like the metallothioneins, GIFB is located on human chromosome 16. In contrast to metallothioneins, GIFB was found to be expressed exclusively in the nervous system. The GIFB protein produced in an E. coli expression vector system inhibited the growth of neonatal rat cortical neurons. Northern blot analysis demonstrated that expression of the GIFB mRNA is drastically decreased in brain tissue from patient's with Alzheimer disease

Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

Tsuji, S.; Kobayashi, H.; Uchida, Y.; Ihara, Y.; Miyatake, T. : Molecular cloning of human growth inhibitory factor cDNA and its down- regulation in Alzheimer's disease. EMBO J. 11: 4843- 4850, 1992. ; and

Uchida, Y.; Takio, K.; Titani, K.; Ihara, Y.; Tomonaga, M. : The growth inhibitory factor that is deficient in the Alzheimer's disease brain is a 68 amino acid metallothionein- like prot.

Further studies establishing the function and utilities of MT3 are found in John Hopkins OMIM database record ID 139255, and in cited publications listed in Table 9, hereby incorporated herein.

GAM3890 SLC17A7 GGTCCACAAGGGGAG A A AGCAGGG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession NM_020309.1) is another GAM3890 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of SLC17A7, a GAM3890 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM3890 TNF GGTCCACAAGGGGAG A A AGCAGGG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM3890 target gene. TNF BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of TNF, a GAM3890 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM3890 TRPM2 GGTCCACAAGGGGAG TRPM2 (Accession NM_003307.1) is another GAM3890 target gene. A A
AGCAGGG TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3890 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3890 is therefore inhibition of TRPM2, a GAM3890 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM3890 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM3892 CNTF AAGTCACCTGAAAAC Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A
TCAACTA GAM3892 target gene. CNTF BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3892 is therefore inhibition of CNTF, a GAM3892 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM3946 ACE TTGCCCAGGCTGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TGCAGTG (ACE, Accession NM_152831.1) is a GAM3946 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3946 is therefore inhibition of ACE, a GAM3946 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM3946 ADAM17 TTGCCCAGGCTGGAG TGCAGTG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_003183.3) is another GAM3946 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3946 is therefore inhibition of ADAM17, a GAM3946 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM3946 CHAT TTGCCCAGGCTGGAG TGCAGTG Choline Acetyltransferase (CHAT, Accession NM_020984.1) is another GAM3946 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3946 is therefore inhibition of CHAT, a GAM3946 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM3946 FLNB TTGCCCAGGCTGGAG TGCAGTG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM3946 target gene. FLNB BINDING SITE is a A A

target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3946 is therefore inhibition of FLNB, a GAM3946 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM3946 HTR2A TTGCCCAGGCTGGAG A A TGCAGTG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM3946 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3946 is therefore inhibition of HTR2A, a GAM3946 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM3946 IAPP TTGCCCAGGCTGGAG A A TGCAGTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM3946 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3946 is therefore inhibition of IAPP, a GAM3946 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM3946 NOTCH1 TTGCCCAGGCTGGAG Notch (Drosophila) Homolog 1 (translocation- associated) A A

TGCAGTG (NOTCH1, Accession NM_017617.2) is another GAM3946 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3946 is therefore inhibition of NOTCH1, a GAM3946 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM3946 TGFB1 TTGCCCAGGCTGGAG TGFB1 (Accession NM_000660.1) is another GAM3946 target gene. A A

TGCAGTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3946 is therefore inhibition of TGFB1. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM3946 ADAM17 CACTGCAACCTCCAC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis B A

CTCCTGG factor, (ADAM17, Accession NM_003183.3) is another GAM3946 target gene. ADAM17 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3946 is therefore inhibition of

ADAM17, a GAM3946 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM3946 IAPP CACTGCAACCTCCAC CTCCTGG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM3946 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM3946 is therefore inhibition of IAPP, a GAM3946 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM3946 OGDH CACTGCAACCTCCAC CTCCTGG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM3946 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3946 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM3946 is therefore inhibition of OGDH, a GAM3946 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM3978 GFAP TTTACAGATGGCAAA GATCTGG GFAP (Accession NM_002055.2) is a GAM3978 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of A A

Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM3978 is therefore inhibition of GFAP. Accordingly, utilities of GAM3978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM3978 IGF1 TTTACAGATGGCAAA GATCTGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM3978 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM3978 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3978 is therefore inhibition of IGF1, a GAM3978 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM3978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM3990 ACE TTGCCTAGGCTGGAG TGCAGTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM3990 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3990 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM3990 is therefore inhibition of ACE, a GAM3990 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM3990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM3990 ADAM17 TTGCCTAGGCTGGAG TGCAGTG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is another GAM3990 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` A A

untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM3990 is therefore inhibition of ADAM17, a GAM3990 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM3990 IAPP TTGCCTAGGCTGGAG TGCAGTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM3990 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3990 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3990 is therefore inhibition of IAPP, a GAM3990 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM3990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM3990 IGF1 TTGCCTAGGCTGGAG TGCAGTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM3990 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3990 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3990 is therefore inhibition of IGF1, a GAM3990 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM3990 include diagnosis, prevention and treatment of Alzheimer,

and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM3990 MAPT TTGCCTAGGCTGGAG TGCAGTG Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM3990 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3990 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3990 is therefore inhibition of MAPT, a GAM3990 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM3990 NOTCH1 TTGCCTAGGCTGGAG TGCAGTG Notch (Drosophila) Homolog 1 (translocation- associated) (NOTCH1, Accession NM_017617.2) is another GAM3990 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM3990 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM3990 is therefore inhibition of NOTCH1, a GAM3990 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM3990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM4008 IL1A TTAGGGCAGGCATGA GAGAACT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is a target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide GAM4008 A A

sequence of GAM4008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4008 is therefore inhibition of IL1A, a GAM4008 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM4008 TNFSF5 TTAGGGCAGGCATGA TNFSF5 (Accession NM_000074.1) is another GAM4008 target gene. A A

GAGAACT TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4008 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM4008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM4011 ACHE TGTGTTGGAGCAGAG Acetylcholinesterase (YT blood group) (ACHE, Accession A A

GCAGGGG NM_015831.1) is a GAM4011 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4011 is therefore inhibition of ACHE, a GAM4011 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM4011 APBB1 TGTGTTGGAGCAGAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GCAGGGG 1 (Fe65) (APBB1, Accession NM_145689.1) is another GAM4011 target

gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4011 is therefore inhibition of APBB1, a GAM4011 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4011 BACE2 TGTGTTGGAGCAGAG GCAGGGG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM4011 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4011 is therefore inhibition of BACE2, a GAM4011 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM4011 CAV1 TGTGTTGGAGCAGAG GCAGGGG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM4011 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4011 is therefore inhibition of CAV1, a GAM4011 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and

therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM4011 A A CRAT TGTGTTGGAGCAGAG GCAGGGG Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is another GAM4011 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4011 is therefore inhibition of CRAT, a GAM4011 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM4011 A A GFAP TGTGTTGGAGCAGAG GCAGGGG GFAP (Accession NM_002055.2) is another GAM4011 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4011 is therefore inhibition of GFAP. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4011 A A HTR2C TGTGTTGGAGCAGAG GCAGGGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM4011 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4011 is therefore inhibition of

HTR2C, a GAM4011 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4011 IGF1 TGTGTTGGAGCAGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GCAGGGG NM_000618.2) is another GAM4011 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4011 is therefore inhibition of IGF1, a GAM4011 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4011 OGDH TGTGTTGGAGCAGAG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A

GCAGGGG NM_002541.1) is another GAM4011 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4011 is therefore inhibition of OGDH, a GAM4011 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM4020 APBA2 ATTTGAGGAGGCTTT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

ACAGCCA 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM4020 target gene. APBA2 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4020 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4020 is therefore inhibition of APBA2, a GAM4020 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4020 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM4020 A A PSEN1 ATTTGAGGAGGCTTT ACAGCCA PSEN1 (Accession NM_007319.1) is another GAM4020 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4020 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4020 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4020 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4020 B A CTSB AGCTGTGAGCCTGCC TTCCAGT CTSB (Accession NM_147783.1) is another GAM4020 target gene. CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4020 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4020 is therefore inhibition of CTSB. Accordingly, utilities of GAM4020 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM4020 A PRNP AGCTGTGAGCCTGCC TTCCAGT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM4020 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4020 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4020 is therefore inhibition of PRNP, a GAM4020 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4020 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM4027 ABCD1 TTCCTGGTGGAGGCA ABCD1 (Accession NM_000033.2) is a GAM4027 target gene. ABCD1 A A
TTCGGAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4027 is therefore inhibition of ABCD1. Accordingly, utilities of GAM4027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM4027 BLMH TTCCTGGTGGAGGCA Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is another A A
TTCGGAG GAM4027 target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4027 is therefore inhibition of BLMH, a GAM4027 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM4027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM4064 APLP2 TGGTCCAGAGGAGGA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

ATGAGGG NM_001642.1) is a GAM4064 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4064 is therefore inhibition of APLP2, a GAM4064 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM4064 BACE TGGTCCAGAGGAGGA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

ATGAGGG is another GAM4064 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of BACE, a GAM4064 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4064 DHCR24 TGGTCCAGAGGAGGA 24- dehydrocholesterol Reductase (DHCR24, Accession A A

ATGAGGG NM_014762.1) is another GAM4064 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of DHCR24, a GAM4064 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4064 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4064 A A GFAP TGGTCCAGAGGAGGA ATGAGGG GFAP (Accession NM_002055.2) is another GAM4064 target gene. GFAP BINDING SITE1 and GFAP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 and GFAP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of GFAP. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4064 A A NGB TGGTCCAGAGGAGGA ATGAGGG Neuroglobin (NGB, Accession NM_021257.2) is another GAM4064 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of NGB, a GAM4064 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM4064 A A OGDH TGGTCCAGAGGAGGA ATGAGGG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM4064 target gene. OGDH BINDING SITE1 through OGDH BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by OGDH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE1 through OGDH BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of

OGDH, a GAM4064 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM4064 PSEN1 TGGTCCAGAGGAGGA A A ATGAGGG PSEN1 (Accession NM_007318.1) is another GAM4064 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4064 TRPM2 TGGTCCAGAGGAGGA A A ATGAGGG TRPM2 (Accession NM_003307.1) is another GAM4064 target gene. TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4064 is therefore inhibition of TRPM2, a GAM4064 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM4064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM4074 NCKAP1 TACGCTGTGCTGTGA A A CATGGTA NCKAP1 (Accession NM_013436.2) is a GAM4074 target gene. BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4074 is therefore inhibition of NCKAP1.

Accordingly, utilities of GAM4074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM4074 A A TRPM2 CATGGTA TACGCTGTGCTGTGA TRPM2 (Accession NM_003307.1) is another GAM4074 target gene. TRPM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4074 is therefore inhibition of TRPM2, a GAM4074 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM4074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM4085 A A CTNND2 CACTCAG TGTAAACATCCCACA Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is a GAM4085 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4085 is therefore inhibition of CTNND2, a GAM4085 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM4085 A A TFCP2 CACTCAG TGTAAACATCCCACA Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM4085 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4085 is therefore inhibition of TFCP2, a GAM4085 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM4130 DHCR24 GGGCCATGACAGGGA A A GATAGGC 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM4130 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4130 is therefore inhibition of DHCR24, a GAM4130 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4130 MPO GGGCCATGACAGGGA A A GATAGGC Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM4130 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4130 is therefore inhibition of MPO, a GAM4130 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM4130 PSEN2 GGGCCATGACAGGGA A A GATAGGC PSEN2 (Accession NM_000447.1) is another GAM4130 target gene. PSEN2 BINDING SITE is a target binding site found in the 5`

untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4130 is therefore inhibition of PSEN2. Accordingly, utilities of GAM4130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM4130 SNCB GGGCCATGACAGGGA GATAGGC Synuclein, Beta (SNCB, Accession NM_003085.2) is another GAM4130 target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4130 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4130 is therefore inhibition of SNCB, a GAM4130 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM4130 TGFB1 GGGCCATGACAGGGA GATAGGC TGFB1 (Accession NM_000660.1) is another GAM4130 target gene. TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4130 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4130 is therefore inhibition of TGFB1. Accordingly, utilities of GAM4130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4136 ADAM17 CCAAAGTGCTAGGAT TACAGCC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is a GAM4136 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide A A

sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4136 is therefore inhibition of ADAM17, a GAM4136 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4136 CRAT CCAAAGTGCTAGGAT Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is A A
TACAGCC another GAM4136 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4136 is therefore inhibition of CRAT, a GAM4136 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM4136 HTR2A CCAAAGTGCTAGGAT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
TACAGCC NM_000621.1) is another GAM4136 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4136 is therefore inhibition of HTR2A, a GAM4136 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM593.

GAM4136 IAPP CCAAAGTGCTAGGAT A A TACAGCC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM4136 target gene. IAPP BINDING SITE1 and IAPP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IAPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE1 and IAPP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4136 is therefore inhibition of IAPP, a GAM4136 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM4136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4136 MTNR1A CCAAAGTGCTAGGAT A A TACAGCC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM4136 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4136 is therefore inhibition of MTNR1A, a GAM4136 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM4136 TGFB1 CCAAAGTGCTAGGAT A A TACAGCC TGFB1 (Accession NM_000660.1) is another GAM4136 target gene. TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4136 is therefore inhibition of TGFB1. Accordingly, utilities of GAM4136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4142 FHL2 TCTTTGATCTCTTCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGGCTT a GAM4142 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4142 is therefore inhibition of FHL2, a GAM4142 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM4142 GYPA TCTTTGATCTCTTCC Glycophorin A (includes MN blood group) (GYPA, Accession A A
GGGGCTT NM_002099.2) is another GAM4142 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4142 is therefore inhibition of GYPA, a GAM4142 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4142 SLC6A4 TCTTTGATCTCTTCC Solute Carrier Family 6 (neurotransmitter transporter, A A
GGGGCTT serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM4142 target gene. SLC6A4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4142 is therefore inhibition of SLC6A4, a GAM4142 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM4147 CTSK AATCTCCATTTGTAA CTSK (Accession NM_000396.2) is a GAM4147 target gene. CTSK A A

ATGTGAC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4147 is therefore inhibition of CTSK. Accordingly, utilities of GAM4147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM4152 ACT ATGACCAGGAATTGA Activator of CAMP- responsive Element Modulator (CR (ACT, A A

GAGACTG Accession NM_020482.3) is a GAM4152 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4152 is therefore inhibition of ACT, a GAM4152 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM4152 ADAM17 ATGACCAGGAATTGA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

GAGACTG factor, (ADAM17, Accession NM_003183.3) is another GAM4152 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM4152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4152 is therefore inhibition of ADAM17, a GAM4152 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4152 PRND ATGACCAGGAATTGA AA GAGACTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM4152 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4152 is therefore inhibition of PRND, a GAM4152 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4188 CAV2 GGAAGAATGTGCTTT AA TGTTGTT Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM4188 target gene. CAV2 BINDING SITE1 and CAV2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CAV2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE1 and CAV2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4188 is therefore inhibition of CAV2, a GAM4188 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4188 CNTF GGAAGAATGTGCTTT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

TGTTGTT another GAM4188 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4188 is therefore inhibition of CNTF, a GAM4188 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM4188 ESR2 GGAAGAATGTGCTTT Estrogen Receptor 2 (ER beta) (ESR2, Accession NM_001437.1) is A A

TGTTGTT another GAM4188 target gene. ESR2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ESR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ESR2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4188 is therefore inhibition of ESR2, a GAM4188 target gene which transcriptional activator involved in regulation of reproduction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ESR2.The function of ESR2 has been established by previous studies. Estrogen receptor- beta (ESR2) is a member of the superfamily of nuclear receptors, which can transduce extracellular signals into transcriptional responses. Mosselman et al. (1996) identified and characterized a human estrogen receptor, which they called estrogen receptor- beta. ESR- beta is homologous to the previously identified ESR- alpha (OMIM Ref. No. 133430) and has an overlapping but nonidentical tissue distribution. The DNA- binding domain of ESR- beta is 96% conserved compared to ESR, and the ligand- binding domain shows 58% conserved residues. Northern blot analysis showed that ESR- beta is expressed in human thymus, spleen, ovary, and testis. Kuiper et al. (1996) identified ESR- beta from a rat prostate cDNA library. Rat ESR- beta is expressed in rat prostate and ovary and is homologous to rat ESR (95% conserved DNA- binding domain; 55% conserved ligand- binding domain). Mosselman et al. (1996) assigned the ESR2 gene to 14q by

study of somatic cell hybrids. Tsukamoto et al. (1998) used a CA repeat at the ESR2 locus to confirm mapping to 14q by linkage to a marker in a radiation hybrid mapping panel. Using PCR and FISH, Enmark et al. (1997) mapped the ESR2 gene to 14q22- q24. Forsell et al. (2001) investigated the CA repeat in intron 5 of the ESRB gene in 336 Alzheimer disease (AD; 104300) patients and in 110 healthy age- and gender- matched controls. There was no significant difference between AD patients and controls when all alleles were compared. However, a significant difference was found when allele 5 (OMIM Ref. No. 155 bp) was studied, as this allele was seen in 13.6% of the controls but only in 8.0% of the AD patients (p of 0.014). Supporting the hypothesis that allele 5 is implicated in the prevention of AD, no AD patient homozygous for this allele was seen, in contrast to 3 homozygous controls. Forsell et al. (2001) suggested that the intronic association identified could be in linkage disequilibrium with a mutation elsewhere in the ESRB gene. Animal model experiments lend further support to the function of ESR2. Zhu et al. (2002) showed that vascular smooth muscle cells and blood vessels from ESRB- deficient mice exhibited multiple functional abnormalities. In wildtype mouse blood vessels, estrogen attenuates vasoconstriction by an ESRB- mediated increase in inducible nitric oxide synthase expression. In contrast, estrogen augments vasoconstriction in blood vessels from ESRB- deficient mice.

It is appreciated that the abovementioned animal model for ESR2 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

Mosselman, S.; Polman, J.; Dijkema, R. : ER- beta: identification and characterization of a novel human estrogen receptor. FEBS Lett. 392: 49- 53, 1996. ; and

Zhu, Y.; Bian, Z.; Lu, P.; Karas, R. H.; Bao, L.; Cox, D.; Hodgin, J.; Shaul, P. W.; Thoren, P.; Smithies, O.; Gustafsson, J.- A.; Mendelsohn, M. E. : Abnormal vascular function and hype.

Further studies establishing the function and utilities of ESR2 are found in John Hopkins OMIM database record ID 601663, and in cited publications listed in Table 9, hereby incorporated herein.

GAM4188 IGF1 GGAAGAATGTGCTTT TGTTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM4188 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. A A

Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4188 is therefore inhibition of IGF1, a GAM4188 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4188 IL1A GGAAGAATGTGCTTT TGTTGTT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM4188 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4188 is therefore inhibition of IL1A, a GAM4188 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM4188 MME GGAAGAATGTGCTTT TGTTGTT Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is another GAM4188 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4188 is therefore inhibition of MME, a GAM4188 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to GAM25.

GAM4188 MTNR1A GGAAGAATGTGCTTT A A TGTTGTT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM4188 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4188 is therefore inhibition of MTNR1A, a GAM4188 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM4188 SNCAIP GGAAGAATGTGCTTT A A TGTTGTT Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is another GAM4188 target gene. SNCAIP BINDING SITE1 and SNCAIP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SNCAIP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE1 and SNCAIP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4188 is therefore inhibition of SNCAIP, a GAM4188 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM4189 ABCD1 GTCCAGTGCTCACTG ABCD1 A A CCGACAT ABCD1 (Accession NM_000033.2) is a GAM4189 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4189 is therefore inhibition of ABCD1. Accordingly, utilities of GAM4189 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM4189 DHCR24 GTCCAGTGCTCACTG 24- dehydrocholesterol Reductase (DHCR24, Accession A A
CCGACAT NM_014762.1) is another GAM4189 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4189 is therefore inhibition of DHCR24, a GAM4189 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4189 GLUL GTCCAGTGCTCACTG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
CCGACAT NM_002065.3) is another GAM4189 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4189 is therefore inhibition of GLUL, a GAM4189 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM4199 APPBP2 GGGGGATGATAGCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
CCAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM4199 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4199 is therefore inhibition of APPBP2, a GAM4199 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4199 MTNR1A GGGGGATGATAGCAG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is
A A
CCAG another GAM4199 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4199 is therefore inhibition of MTNR1A, a GAM4199 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM4199 GFAP CCTCTCCATGTACCC GFAP (Accession NM_002055.2) is another GAM4199 target gene.
B A
ATTCCCC GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4199 is therefore inhibition of GFAP. Accordingly, utilities of GAM4199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4199 PSEN1 CCTCTCCATGTACCC PSEN1 (Accession NM_007318.1) is another GAM4199 target gene.
B A
ATTCCCC PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4199 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4199 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4205 MPO TCAGGTTCCTGATTG GAGTTCT Myeloperoxidase (MPO, Accession NM_000250.1) is a target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4205 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A A A

A function of GAM4205 is therefore inhibition of MPO, a GAM4205 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM4205 OLR1 TCAGGTTCCTGATTG GAGTTCT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM4205 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4205 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4205 is therefore inhibition of OLR1, a GAM4205 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4205 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4238 APBA1 AGAGATAAAGAGGTT TAGGCAG Amyloid Beta (A4) Precursor Protein- binding, Family A, Member 1 (X11) (APBA1, Accession NM_001163.2) is a GAM4238 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING A A

SITE, and secondary structure complementarity to the nucleotide sequence of GAM4238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4238 is therefore inhibition of APBA1, a GAM4238 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4238 CNTF AGAGATAAAGAGGTT TAGGCAG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM4238 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4238 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4238 is therefore inhibition of CNTF, a GAM4238 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM4243 DLST AAAGGCAGACGGTGA ATGCCTT Dihydrolipoamide S- succinyltransferase (E2 component of 2-oxo- glutarat (DLST, Accession NM_001933.2) is a GAM4243 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4243 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4243 is therefore inhibition of DLST, a GAM4243 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM240.

GAM4243 A A GFAP AAAGGCAGACGGTGA ATGCCTTT GFAP (Accession NM_002055.2) is another GAM4243 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4243 is therefore inhibition of GFAP. Accordingly, utilities of GAM4243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4243 A A GYPA AAAGGCAGACGGTGA ATGCCTTT Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM4243 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4243 is therefore inhibition of GYPA, a GAM4243 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4298 A A AGER TGGCAAGGTGTGGGC TAGAGAT Advanced Glycosylation End Product- specific Receptor (AGER, Accession NM_172197.1) is a GAM4298 target gene. AGER BINDING SITE1 and AGER BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by AGER, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AGER BINDING SITE1 and AGER BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4298 is therefore inhibition of AGER, a GAM4298 target gene which Receptor for advanced glycosylation end products (receptor for AGE). and therefore is associated with Alzheimer. Accordingly, utilities of GAM4298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with AGER.The function of AGER and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2350.

GAM4298 MAPT TGGCAAGGTGTGGGC TAGAGAT Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM4298 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4298 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4298 is therefore inhibition of MAPT, a GAM4298 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM4298 TRPM2 TGGCAAGGTGTGGGC TAGAGAT TRPM2 (Accession NM_003307.1) is another GAM4298 target gene. A A

TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4298 is therefore inhibition of TRPM2, a GAM4298 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM4298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM4315 ACHE TAGCACCTTCTGAAA TAACGTG Acetylcholinesterase (YT blood group) (ACHE, Accession NM_015831.1) is a GAM4315 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4315 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4315 is therefore inhibition of ACHE, a GAM4315 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM4315 SNCA TAGCACCTTCTGAAA SNCA (Accession NM_000345.2) is another GAM4315 target gene. A A

TAACGTG SNCA BINDING SITE1 and SNCA BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SNCA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE1 and SNCA BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4315 is therefore inhibition of SNCA. Accordingly, utilities of GAM4315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM4364 APPBP2 AGGGTTGTTAGTTTT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A TTGGTTG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM4364 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4364 is therefore inhibition of APPBP2, a GAM4364 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4364 IGF1 AGGGTTGTTAGTTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A TTGGTTG NM_000618.2) is another GAM4364 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING

SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4364 is therefore inhibition of IGF1, a GAM4364 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4376 APLP2 GAGGTAGAGGTTGCA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A
GTGAGTC NM_001642.1) is a GAM4376 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4376 is therefore inhibition of APLP2, a GAM4376 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM4376 APPBP2 GAGGTAGAGGTTGCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GTGAGTC Protein 2 (APPBP2, Accession NM_006380.2) is another GAM4376 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of APPBP2, a GAM4376 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4376 BACE GAGGTAGAGGTTGCA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

GTGAGTC is another GAM4376 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of BACE, a GAM4376 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4376 CNTF GAGGTAGAGGTTGCA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

GTGAGTC another GAM4376 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of CNTF, a GAM4376 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM4376 DLST GAGGTAGAGGTTGCA Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GTGAGTC oxo- glutarat (DLST, Accession NM_001933.2) is another GAM4376 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of DLST, a GAM4376 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM4376 FHL2 GAGGTAGAGGTTGCA A A GTGAGTC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM4376 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of FHL2, a GAM4376 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM4376 GYPA GAGGTAGAGGTTGCA A A GTGAGTC Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM4376 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of GYPA, a GAM4376 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4376 HTR2C GAGGTAGAGGTTGCA A A GTGAGTC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM4376 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of HTR2C, a GAM4376 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4376 IGF1 GAGGTAGAGGTTGCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A GTGAGTC NM_000618.2) is another GAM4376 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of IGF1, a GAM4376 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4376 MAPK10 GAGGTAGAGGTTGCA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A GTGAGTC NM_002753.2) is another GAM4376 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of MAPK10, a GAM4376 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4376 MAPT GAGGTAGAGGTTGCA GTGAGTC Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM4376 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4376 is therefore inhibition of MAPT, a GAM4376 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM4376 PRND GAGGTAGAGGTTGCA GTGAGTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM4376 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4376 is therefore inhibition of PRND, a GAM4376 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4376 TNF GAGGTAGAGGTTGCA GTGAGTC Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM4376 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure A A

complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of TNF, a GAM4376 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4376 TNFRSF6 GAGGTAGAGGTTGCA GTGAGTC A A

TNFRSF6 (Accession NM_000043.3) is another GAM4376 target gene. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4376 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM4376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM4377 CAV1 CCCTGGGCTGGTGTT TGACTTG A A

Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM4377 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4377 is therefore inhibition of CAV1, a GAM4377 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM4377 DHCR24 GAGTACAAATGAAGT CTGTGGG B A

24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM4377 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4377 is therefore inhibition of DHCR24, a GAM4377 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4377 OGDH GAGTACAAATGAAGT Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession B A CTGTGGG NM_002541.1) is another GAM4377 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4377 is therefore inhibition of OGDH, a GAM4377 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM4382 ACHE TGACTGGAGGAAGGG Acetylcholinesterase (YT blood group) (ACHE, Accession A A AGGTAAG NM_015831.1) is a GAM4382 target gene. ACHE BINDING SITE1 and ACHE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ACHE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE1 and ACHE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4382 is therefore inhibition of ACHE, a GAM4382 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM4382 BACE TGACTGGAGGAAGGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

AGGTAAG is another GAM4382 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4382 is therefore inhibition of BACE, a GAM4382 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4382 CASP3 TGACTGGAGGAAGGG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

AGGTAAG Accession NM_032991.1) is another GAM4382 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4382 is therefore inhibition of CASP3, a GAM4382 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM4382 DHCR24 TGACTGGAGGAAGGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

AGGTAAG NM_014762.1) is another GAM4382 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4382 is therefore inhibition of DHCR24, a GAM4382 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4382 NCSTN TGACTGGAGGAAGGG NCSTN (Accession NM_015331.1) is another GAM4382 target gene. A A

AGGTAAG NCSTN BINDING SITE1 and NCSTN BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCSTN, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE1 and NCSTN BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4382 is therefore inhibition of NCSTN, a GAM4382 target gene which has a central role in presenilin-mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp- 1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4382 NGB TGACTGGAGGAAGGG Neuroglobin (NGB, Accession NM_021257.2) is another GAM4382 A A

AGGTAAG target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4382 is therefore inhibition of NGB, a GAM4382 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM281.

GAM4382 SLC6A4 TGACTGGAGGAAGGG AGGTAAG Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM4382 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4382 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4382 is therefore inhibition of SLC6A4, a GAM4382 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4382 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM4398 APBA1 ATAGAAGAGCAGTGG GGTAGAA Amyloid Beta (A4) Precursor Protein- binding, Family A, Member 1 (X11) (APBA1, Accession NM_001163.2) is a GAM4398 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4398 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4398 is therefore inhibition of APBA1, a GAM4398 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4398 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4398 IGF1 ATAGAAGAGCAGTGG GGTAGAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM4398 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4398 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4398 is therefore inhibition of IGF1, a GAM4398 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4398 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4408 SERPINA3 TTTGGATTCCTGGTTCCTACAG Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha- 1 antiprotei (SERPINA3, Accession NM_001085.2) is a GAM4408 target gene. SERPINA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SERPINA3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4408 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4408 is therefore inhibition of SERPINA3, a GAM4408 target gene which is a member of the serpin family of serine protease inhibitors. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SERPINA3.The function of SERPINA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM4423 CASP3 AAAGGAGTTTGTGACATTGACA Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is a GAM4423 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4423 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4423 is therefore inhibition of CASP3, a GAM4423 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4423 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM4423 CTSB AAAGGAGTTTGTGAC CTSB (Accession NM_147782.1) is another GAM4423 target gene. A A

ATTGACA CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4423 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4423 is therefore inhibition of CTSB. Accordingly, utilities of GAM4423 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM4426 APBB2 GAAGTTTGAAGCCTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TTGTTCA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM4426 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4426 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4426 is therefore inhibition of APBB2, a GAM4426 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4426 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4426 CNTF GAAGTTTGAAGCCTG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

TTGTTCA another GAM4426 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4426 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4426 is therefore inhibition of CNTF, a GAM4426 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4426 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM175.

GAM4426 MME GAAGTTTGAAGCCTG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
TTGTTCA enkephalinase, (MME, Accession NM_007288.1) is another GAM4426 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4426 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4426 is therefore inhibition of MME, a GAM4426 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4426 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4429 FLNB CGACTCTTGACCATG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
GCTGGGG NM_001457.1) is a GAM4429 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4429 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4429 is therefore inhibition of FLNB, a GAM4429 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4429 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM4429 MAPT CGACTCTTGACCATG Microtubule- associated Protein Tau (MAPT, Accession A A
GCTGGGG NM_173727.1) is another GAM4429 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4429 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4429 is therefore inhibition of MAPT, a GAM4429 target gene which Microtubule- associated protein

tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4429 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM4429 A A TRPM2 CGACTCTTGACCATG GCTGGGG TRPM2 (Accession NM_003307.1) is another GAM4429 target gene. TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4429 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4429 is therefore inhibition of TRPM2, a GAM4429 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM4429 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM4432 A A GLUL CAGGTGCAAGTGTTA AAGGGTA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession NM_002065.3) is a GAM4432 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4432 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4432 is therefore inhibition of GLUL, a GAM4432 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4432 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM4446 A A CNTF GTCGGGAGGAAAAGA AAGAAGA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a GAM4446 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4446 is therefore inhibition of CNTF, a GAM4446 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM4446 BACE TTTTTATCTTTTTCT Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) B A

CCAGATG is another GAM4446 target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 and BACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4446 is therefore inhibition of BACE, a GAM4446 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4446 CAV2 TTTTTATCTTTTTCT Caveolin 2 (CAV2, Accession NM_001233.2) is another GAM4446 B A

CCAGATG target gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4446 is therefore inhibition of CAV2, a GAM4446 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has

been established by previous studies, as described hereinabove with reference to GAM55.

GAM4448 GLUL TCTTTGCTGGAAGGT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
GCCTCCC NM_002065.3) is a GAM4448 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4448 is therefore inhibition of GLUL, a GAM4448 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM4448 PIN1 TCTTTGCTGGAAGGT Protein (peptidyl- prolyl cis/trans isomerase) NIMA- A A
GCCTCCC interacting 1 (PIN1, Accession NM_006221.1) is another GAM4448 target gene. PIN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PIN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4448 is therefore inhibition of PIN1, a GAM4448 target gene which intervenes in cell cycle regulation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PIN1.The function of PIN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM4448 PSEN2 TCTTTGCTGGAAGGT PSEN2 (Accession NM_012486.1) is another GAM4448 target gene. A A
GCCTCCC PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4448 is therefore inhibition of

PSEN2. Accordingly, utilities of GAM4448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM4459 PSEN1 TGACAAGATACAGGG PSEN1 (Accession NM_007319.1) is a GAM4459 target gene. PSEN1 A A

TAGTGAA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4459 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4459 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4516 ADAMTS5 GGCATGATGGAGAGG A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GTGGAGA Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM4516 target gene. ADAMTS5 BINDING SITE1 and ADAMTS5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ADAMTS5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE1 and ADAMTS5 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4516 is therefore inhibition of ADAMTS5, a GAM4516 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM4516 APLP1 GGCATGATGGAGAGG Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession A A

GTGGAGA NM_005166.2) is another GAM4516 target gene. APLP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of APLP1, a GAM4516 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer.

Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM4516 APLP2 GGCATGATGGAGAGG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A
GTGGAGA NM_001642.1) is another GAM4516 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of APLP2, a GAM4516 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM4516 BACE GGCATGATGGAGAGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A
GTGGAGA is another GAM4516 target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 and BACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of BACE, a GAM4516 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4516 DHCR24 GGCATGATGGAGAGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A
GTGGAGA NM_014762.1) is another GAM4516 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of DHCR24, a GAM4516 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4516 DLST GGCATGATGGAGAGG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GTGGAGA oxo- glutarat (DLST, Accession NM_001933.2) is another GAM4516 target gene. DLST BINDING SITE1 and DLST BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DLST, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE1 and DLST BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of DLST, a GAM4516 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM4516 GLUL GGCATGATGGAGAGG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

GTGGAGA NM_002065.3) is another GAM4516 target gene. GLUL BINDING SITE1 through GLUL BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by GLUL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE1 through GLUL BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of GLUL, a GAM4516 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM4516 HD GGCATGATGGAGAGG HD (Accession NM_002111.3) is another GAM4516 target gene. HD
A A
GTGGAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of HD. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4516 HTR2C GGCATGATGGAGAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A
GTGGAGA NM_000868.1) is another GAM4516 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of HTR2C, a GAM4516 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4516 IGF1 GGCATGATGGAGAGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GTGGAGA NM_000618.2) is another GAM4516 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of IGF1, a GAM4516 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity

and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4516 MAPT GGCATGATGGAGAGG GTGGAGA Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM4516 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4516 is therefore inhibition of MAPT, a GAM4516 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM4516 MME GGCATGATGGAGAGG GTGGAGA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007288.1) is another GAM4516 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4516 is therefore inhibition of MME, a GAM4516 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4516 PLCD1 GGCATGATGGAGAGG GTGGAGA Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is another GAM4516 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, A A

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of PLCD1, a GAM4516 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM4516 PSEN1 GGCATGATGGAGAGG A A GTGGAGA PSEN1 (Accession NM_007319.1) is another GAM4516 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4516 SLC17A7 GGCATGATGGAGAGG A A GTGGAGA SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession NM_020309.1) is another GAM4516 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of SLC17A7, a GAM4516 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM4516 TNFRSF6 GGCATGATGGAGAGG A A TNFRSF6 (Accession NM_152873.1) is another GAM4516 target gene.

GTGGAGA TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM4516 TNFSF5 GGCATGATGGAGAGG TNFSF5 (Accession NM_000074.1) is another GAM4516 target gene. A A

GTGGAGA TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4516 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM4516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM4538 HTR2C GAAACTAGTGTTGGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

ACAAAGG NM_000868.1) is a GAM4538 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4538 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4538 is therefore inhibition of HTR2C, a GAM4538 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4538 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4538 MME GAAACTAGTGTTGGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

ACAAAGG enkephalinase, (MME, Accession NM_007288.1) is another GAM4538 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by

MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4538 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4538 is therefore inhibition of MME, a GAM4538 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4538 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4544 BACE GGTGATGCATTTAAA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

AGGGCAG is a GAM4544 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4544 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4544 is therefore inhibition of BACE, a GAM4544 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4544 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4544 MAPK10 GGTGATGCATTTAAA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

AGGGCAG NM_138980.1) is another GAM4544 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4544 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4544 is therefore inhibition of MAPK10, a GAM4544 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4544 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4544 PRNP GGTGATGCATTTAAA Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A

AGGGCAG Strausler- (PRNP, Accession NM_000311.1) is another GAM4544 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4544 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4544 is therefore inhibition of PRNP, a GAM4544 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4544 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM4544 S100B GGTGATGCATTTAAA S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A

AGGGCAG NM_006272.1) is another GAM4544 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4544 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4544 is therefore inhibition of S100B, a GAM4544 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4544 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM4544 TNFRSF6 GGTGATGCATTTAAA TNFRSF6 (Accession NM_152872.1) is another GAM4544 target gene. A A

AGGGCAG TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4544 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4544 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM4544 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM4557 APPBP2 TATTACATTCATTTT GATGGTT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM4557 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4557 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4557 is therefore inhibition of APPBP2, a GAM4557 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4557 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4557 IL1A TATTACATTCATTTT GATGGTT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM4557 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4557 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4557 is therefore inhibition of IL1A, a GAM4557 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4557 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM4561 IGF1 AGTAGACAGTGGCAA CATAGTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM4561 target gene. IGF1 BINDING SITE is a target A A

binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4561 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4561 is therefore inhibition of IGF1, a GAM4561 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4561 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4561 MME AGTAGACAGTGGCAA Membrane Metallo- endopeptidase (neutral endopeptidase, A A CATAGTC enkephalinase, (MME, Accession NM_000902.2) is another GAM4561 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4561 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4561 is therefore inhibition of MME, a GAM4561 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4561 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4571 ADAM17 CCTGGAGTGACAGGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A GTAGCCT factor, (ADAM17, Accession NM_003183.3) is a GAM4571 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4571 is therefore inhibition of ADAM17, a GAM4571 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4571 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4571 GLUL CCTGGAGTGACAGGT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
GTAGCCT NM_002065.3) is another GAM4571 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4571 is therefore inhibition of GLUL, a GAM4571 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM4571 IAPP CCTGGAGTGACAGGT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
GTAGCCT another GAM4571 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4571 is therefore inhibition of IAPP, a GAM4571 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM4571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4571 PLAU CCTGGAGTGACAGGT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A
GTAGCCT is another GAM4571 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM4571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4571 is therefore inhibition of PLAU, a GAM4571 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM4571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM4571 MPO GCTGCTGCCTCAACA Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM4571 B A
TTTTAGG target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4571 is therefore inhibition of MPO, a GAM4571 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM4571 NCKAP1 GCTGCTGCCTCAACA NCKAP1 (Accession NM_013436.2) is another GAM4571 target gene. B A
TTTTAGG NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4571 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM4571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM4633 BACE TCTTTTTGTTGTAGC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A
TGTATGG is a GAM4633 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4633 is therefore inhibition of BACE, a GAM4633 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4633 BCHE TCTTTTTGTTGTAGC BCHE (Accession NM_000055.1) is another GAM4633 target gene. A A

TGTATGG BCHE BINDING SITE1 and BCHE BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BCHE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE1 and BCHE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4633 is therefore inhibition of BCHE. Accordingly, utilities of GAM4633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM4633 IL1A TCTTTTTGTTGTAGC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A TGTATGG GAM4633 target gene. IL1A BINDING SITE1 and IL1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IL1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE1 and IL1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4633 is therefore inhibition of IL1A, a GAM4633 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM4650 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTGAT a GAM4650 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4650 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4650 is therefore inhibition of FHL2, a GAM4650 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4650 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM4650 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTGAT NM_000618.2) is another GAM4650 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4650 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4650 is therefore inhibition of IGF1, a GAM4650 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4650 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4650 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGTGAT another GAM4650 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4650 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4650 is therefore inhibition of PRND, a GAM4650 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM4650 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4656 CTNND2 AAGGCACTTGCCCAG AGCTGCA Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is a GAM4656 target gene. CTNND2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4656 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4656 is therefore inhibition of CTNND2, a GAM4656 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4656 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM4656 DHCR24 AAGGCACTTGCCCAG AGCTGCA 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM4656 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4656 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4656 is therefore inhibition of DHCR24, a GAM4656 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4656 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4656 FLNB AAGGCACTTGCCCAG AGCTGCA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM4656 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4656 RNA are set A A

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4656 is therefore inhibition of FLNB, a GAM4656 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4656 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM4656 TGFB1 AAGGCACTTGCCCAG TGFB1 (Accession NM_000660.1) is another GAM4656 target gene. A A

AGCTGCA TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4656 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4656 is therefore inhibition of TGFB1. Accordingly, utilities of GAM4656 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4671 HD ACCAGCTGCATCCTG HD (Accession NM_002111.3) is a GAM4671 target gene. HD BINDING A A

CAAACTT SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4671 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4671 is therefore inhibition of HD. Accordingly, utilities of GAM4671 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4671 HTR2C CACTTTCAGAGATGC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession B A

CCTGAGT NM_000868.1) is another GAM4671 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4671 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4671 is therefore inhibition of HTR2C, a GAM4671 target gene which activates phospholipase C and

regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4671 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4671 MAPT CACTTTCAGAGATGC CCTGAGT Microtubule- associated Protein Tau (MAPT, Accession NM_016841.1) is another GAM4671 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4671 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM4671 is therefore inhibition of MAPT, a GAM4671 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4671 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM4685 ACE AGACTGGCCTCAAGC TCCCAGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM4685 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4685 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4685 is therefore inhibition of ACE, a GAM4685 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM4685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4685 HTR2A AGACTGGCCTCAAGC TCCCAGA 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM4685 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as A A

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4685 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4685 is therefore inhibition of HTR2A, a GAM4685 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM4685 TGFB1 AGACTGGCCTCAAGC TGFB1 (Accession NM_000660.1) is another GAM4685 target gene. A A

TCCCAGA TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4685 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4685 is therefore inhibition of TGFB1. Accordingly, utilities of GAM4685 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4690 ACE TCTGTCATTTTTCTC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A TTTCCAT (ACE, Accession NM_152831.1) is a GAM4690 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4690 is therefore inhibition of ACE, a GAM4690 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4690 ADAMTS5 TCTGTCATTTTTCTC A Disintegrin- like and Metalloprotease (reprolysin type) with A A TTTCCAT Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM4690 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4690 is therefore inhibition of ADAMTS5, a GAM4690 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM4690 DHCR24 TCTGTCATTTTTCTC TTTCCAT A A

24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM4690 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4690 is therefore inhibition of DHCR24, a GAM4690 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4690 PRND TCTGTCATTTTTCTC TTTCCAT A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM4690 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4690 is therefore inhibition of PRND, a GAM4690 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases

and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4690 PRNP TCTGTCATTTTTCTC TTTCCAT A A Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM4690 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4690 is therefore inhibition of PRNP, a GAM4690 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM4690 SNCAIP TCTGTCATTTTTCTC TTTCCAT A A Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is another GAM4690 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4690 is therefore inhibition of SNCAIP, a GAM4690 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM4690 TNFRSF6 TCTGTCATTTTTCTC TTTCCAT A A TNFRSF6 (Accession NM_152874.1) is another GAM4690 target gene. TNFRSF6 BINDING SITE1 through TNFRSF6 BINDING SITE4 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 through TNFRSF6 BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM4690 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4690 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM4690 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM4707 FHL2 CATTGCACTCCAGCC A A TAGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM4707 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4707 is therefore inhibition of FHL2, a GAM4707 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM4707 HD CATTGCACTCCAGCC A A TAGGCAA HD (Accession NM_002111.3) is another GAM4707 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4707 is therefore inhibition of HD. Accordingly, utilities of GAM4707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4707 IGF1 CATTGCACTCCAGCC A A TAGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM4707 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4707 is therefore inhibition of

IGF1, a GAM4707 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4707 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TAGGCAA another GAM4707 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM4707 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4707 is therefore inhibition of PRND, a GAM4707 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4709 ADAMTS5 CAGCAGTGTTGCGAA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

TCATCAC Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM4709 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4709 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4709 is therefore inhibition of ADAMTS5, a GAM4709 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4709 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM4709 TNFRSF5 CAGCAGTGTTGCGAA TNFRSF5 (Accession NM_152854.1) is another GAM4709 target gene. A A

TCATCAC TNFRSF5 BINDING SITE is a target binding site found in the 3`

untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4709 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4709 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM4709 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM4733 CAV1 TCCCCAAGCCTTGTA CCAGCGT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM4733 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4733 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4733 is therefore inhibition of CAV1, a GAM4733 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4733 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM4733 GFAP TCCCCAAGCCTTGTA CCAGCGT GFAP (Accession NM_002055.2) is another GAM4733 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4733 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4733 is therefore inhibition of GFAP. Accordingly, utilities of GAM4733 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4733 TFCP2 TCCCCAAGCCTTGTA CCAGCGT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM4733 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences A A

of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4733 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4733 is therefore inhibition of TFCP2, a GAM4733 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4733 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM4738 BACE TTAATGCTAATCGTG Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A
ATAGGGG is a GAM4738 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4738 is therefore inhibition of BACE, a GAM4738 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4738 FPRL1 TTAATGCTAATCGTG FPRL1 (Accession NM_001462.1) is another GAM4738 target gene. A A
ATAGGGG FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4738 is therefore inhibition of FPRL1. Accordingly, utilities of GAM4738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM4738 SLC6A4 TTAATGCTAATCGTG Solute Carrier Family 6 (neurotransmitter transporter, A A
ATAGGGG serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM4738 target gene. SLC6A4 BINDING SITE1 and SLC6A4 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded

by SLC6A4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE1 and SLC6A4 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4738 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4738 is therefore inhibition of SLC6A4, a GAM4738 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4738 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM4769 ACE CGCTATGTTGGCCAG GCTGGTC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM4769 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4769 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4769 is therefore inhibition of ACE, a GAM4769 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM4769 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4769 ADAM17 CGCTATGTTGGCCAG GCTGGTC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is another GAM4769 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4769 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4769 is therefore inhibition of ADAM17, a GAM4769 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM4769 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4769 HD CGCTATGTTGGCCAG HD (Accession NM_002111.3) is another GAM4769 target gene. HD A A

GCTGGTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4769 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4769 is therefore inhibition of HD. Accordingly, utilities of GAM4769 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4769 IAPP CGCTATGTTGGCCAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

GCTGGTC another GAM4769 target gene. IAPP BINDING SITE1 and IAPP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IAPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE1 and IAPP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4769 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4769 is therefore inhibition of IAPP, a GAM4769 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM4769 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4769 TGFB1 CGCTATGTTGGCCAG TGFB1 (Accession NM_000660.1) is another GAM4769 target gene. A A

GCTGGTC TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4769 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4769 is therefore inhibition of

TGFB1. Accordingly, utilities of GAM4769 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4796 ADAMTS5 TACTCATTTATGCAT TGTTTTG A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM4796 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4796 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4796 is therefore inhibition of ADAMTS5, a GAM4796 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4796 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM4796 CASP3 TACTCATTTATGCAT TGTTTTG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_004346.2) is another GAM4796 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4796 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4796 is therefore inhibition of CASP3, a GAM4796 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4796 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM4796 MME TACTCATTTATGCAT TGTTTTG Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007288.1) is another GAM4796 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4796 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4796 is therefore inhibition of MME, a GAM4796 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4796 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4800 A DHCR24 GGAAAACAAGTACCC CTGGAAC A 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM4800 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4800 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4800 is therefore inhibition of DHCR24, a GAM4800 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4800 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4800 A PSEN1 GGAAAACAAGTACCC CTGGAAC A PSEN1 (Accession NM_000021.2) is another GAM4800 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4800 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4800 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4800 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4803 A CTSG ATGGGCAAATACTGG GAGCTGG A Cathepsin G (CTSG, Accession NM_001911.2) is a GAM4803 target gene. CTSG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4803 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM4803 is therefore inhibition of CTSG, a GAM4803 target gene which is a member of the peptidase S1 protein family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4803 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSG.The function of CTSG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2514.

GAM4803 PLCD1 ATGGGCAAATACTGG GAGCTGG Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is another GAM4803 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4803 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4803 is therefore inhibition of PLCD1, a GAM4803 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM4803 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM4803 TNF ATGGGCAAATACTGG GAGCTGG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM4803 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4803 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM4803 is therefore inhibition of TNF, a GAM4803 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM4803 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4814 ADAM17 TTGCCCAGGCTAGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

TGCAGTG factor, (ADAM17, Accession NM_003183.3) is a GAM4814 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4814 is therefore inhibition of ADAM17, a GAM4814 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM4814 CHAT TTGCCCAGGCTAGAG Choline Acetyltransferase (CHAT, Accession NM_020984.1) is A A

TGCAGTG another GAM4814 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of CHAT, a GAM4814 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM4814 HTR2A TTGCCCAGGCTAGAG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

TGCAGTG NM_000621.1) is another GAM4814 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of HTR2A, a GAM4814 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM4814 IAPP TTGCCCAGGCTAGAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

TGCAGTG another GAM4814 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of IAPP, a GAM4814 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4814 TGFB1 TTGCCCAGGCTAGAG TGFB1 (Accession NM_000660.1) is another GAM4814 target gene. A A

TGCAGTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of TGFB1. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4814 HTR2C CACTGCAACCTCTGC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession B A

CTCCTGG NM_000868.1) is another GAM4814 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of

HTR2C, a GAM4814 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4814 IAPP CACTGCAACCTCTGC CTCCTGG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM4814 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM4814 is therefore inhibition of IAPP, a GAM4814 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4814 MTNR1A CACTGCAACCTCTGC CTCCTGG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM4814 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM4814 is therefore inhibition of MTNR1A, a GAM4814 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM4814 OGDH CACTGCAACCTCTGC CTCCTGG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM4814 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as B A

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of OGDH, a GAM4814 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM4814 PRND CACTGCAACCTCTGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is B A

CTCCTGG another GAM4814 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4814 is therefore inhibition of PRND, a GAM4814 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4821 MME TATGTGAGACACTGT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

CCTAGGC enkephalinase, (MME, Accession NM_007288.1) is a GAM4821 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4821 is therefore inhibition of MME, a GAM4821 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to GAM25.

GAM4821 ACT GCCTGGCCTTCCTGT Activator of CAMP- responsive Element Modulator (CR (ACT, B A GTTTTAC Accession NM_020482.3) is another GAM4821 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4821 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4821 is therefore inhibition of ACT, a GAM4821 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4821 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM4844 MME TGATTGTATGATATA Membrane Metallo- endopeptidase (neutral endopeptidase, A A TGAGTTT enkephalinase, (MME, Accession NM_007287.1) is a GAM4844 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4844 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4844 is therefore inhibition of MME, a GAM4844 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4844 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4895 ABCD1 GCTGCTCCTGCTCTC ABCD1 (Accession NM_000033.2) is a GAM4895 target gene. ABCD1 A A CCTCTCC BINDING SITE1 and ABCD1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ABCD1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE1 and ABCD1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4895 is therefore inhibition of ABCD1. Accordingly, utilities of GAM4895 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM4895 ADAM10 GCTGCTCCTGCTCTC A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A

CCTCTCC Accession NM_001110.1) is another GAM4895 target gene. ADAM10 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of ADAM10, a GAM4895 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM4895 APBA1 GCTGCTCCTGCTCTC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

CCTCTCC 1 (X11) (APBA1, Accession NM_001163.2) is another GAM4895 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of APBA1, a GAM4895 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4895 APBB1 GCTGCTCCTGCTCTC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CCTCTCC 1 (Fe65) (APBB1, Accession NM_001164.2) is another GAM4895 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of APBB1, a GAM4895 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM4895 A A BACE GCTGCTCCTGCTCTC CCTCTCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) is another GAM4895 target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 and BACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of BACE, a GAM4895 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4895 A A CRAT GCTGCTCCTGCTCTC CCTCTCC Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is another GAM4895 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of CRAT, a GAM4895 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM4895 CRH GCTGCTCCTGCTCTC Corticotropin Releasing Hormone (CRH, Accession NM_000756.1) is A A

CCTCTCC another GAM4895 target gene. CRH BINDING SITE1 through CRH BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by CRH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRH BINDING SITE1 through CRH BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of CRH, a GAM4895 target gene which regulates the release of corticotropin from pituitary gland. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRH.The function of CRH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1976.

GAM4895 ESR2 GCTGCTCCTGCTCTC Estrogen Receptor 2 (ER beta) (ESR2, Accession NM_001437.1) is A A

CCTCTCC another GAM4895 target gene. ESR2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ESR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ESR2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of ESR2, a GAM4895 target gene which transcriptional activator involved in regulation of reproduction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ESR2.The function of ESR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM4188.

GAM4895 FHL2 GCTGCTCCTGCTCTC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CCTCTCC another GAM4895 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of FHL2, a GAM4895 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM4895 GFAP GCTGCTCCTGCTCTC GFAP (Accession NM_002055.2) is another GAM4895 target gene. A A

CCTCTCC GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of GFAP. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4895 HD GCTGCTCCTGCTCTC HD (Accession NM_002111.3) is another GAM4895 target gene. HD A A

CCTCTCC BINDING SITE1 through HD BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 through HD BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of HD. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4895 MAPT GCTGCTCCTGCTCTC Microtubule- associated Protein Tau (MAPT, Accession A A

CCTCTCC NM_005910.2) is another GAM4895 target gene. MAPT BINDING SITE1 through MAPT BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 through MAPT BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of MAPT, a GAM4895 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM4895 MME GCTGCTCCTGCTCTC Membrane Metallo- endopeptidase (neutral endopeptidase, A A

CCTCTCC enkephalinase, (MME, Accession NM_000902.2) is another GAM4895 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of MME, a GAM4895 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4895 PSEN1 GCTGCTCCTGCTCTC PSEN1 (Accession NM_007318.1) is another GAM4895 target gene. A A

CCTCTCC PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PSEN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of PSEN1. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM4895 TGFB1 GCTGCTCCTGCTCTC TGFB1 (Accession NM_000660.1) is another GAM4895 target gene. A A

CCTCTCC TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4895 is therefore inhibition of TGFB1. Accordingly, utilities of GAM4895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM4904 APBB2 TGGGGCACTGTGGAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GTGTCAT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM4904 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4904 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4904 is therefore inhibition of APBB2, a GAM4904 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4904 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4904 ARHA TGGGGCACTGTGGAG Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

GTGTCAT is another GAM4904 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4904 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4904 is therefore inhibition of ARHA, a GAM4904 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4904 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM4904 CTSG TGGGGCACTGTGGAG Cathepsin G (CTSG, Accession NM_001911.2) is another GAM4904 A A

GTGTCAT target gene. CTSG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSG BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM4904 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4904 is therefore inhibition of CTSG, a GAM4904 target gene which is a member of the peptidase S1 protein family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4904 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSG.The function of CTSG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2514.

GAM4904 MAPK10 TGGGGCACTGTGGAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A GTGTCAT NM_138981.1) is another GAM4904 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4904 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4904 is therefore inhibition of MAPK10, a GAM4904 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4904 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM4904 UBB TGGGGCACTGTGGAG Ubiquitin B (UBB, Accession NM_018955.2) is another GAM4904 A A GTGTCAT target gene. UBB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4904 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4904 is therefore inhibition of UBB, a GAM4904 target gene which marks cellular proteins for degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM4904 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM3298.

GAM4913 APPBP2 TATAACAGCCAGCTT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A GGATTCA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM4913 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4913 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4913 is therefore inhibition of APPBP2, a GAM4913 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4913 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4932 BACE TGGAGAATTAAAAAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A GGTAGTG is a GAM4932 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4932 is therefore inhibition of BACE, a GAM4932 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM4932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM4932 MPO TGGAGAATTAAAAAG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM4932 A A GGTAGTG target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4932 is therefore inhibition of

MPO, a GAM4932 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM4946 APPBP2 TGAGATGAACCCGGT ACCTCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM4946 target gene. APPBP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4946 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4946 is therefore inhibition of APPBP2, a GAM4946 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4969 ACE AGCAGAGCCACCAAA TTTAGTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM4969 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4969 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM4969 is therefore inhibition of ACE, a GAM4969 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM4969 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM4969 HD AGCAGAGCCACCAAA TTTAGTG HD (Accession NM_002111.3) is another GAM4969 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site A A

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4969 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4969 is therefore inhibition of HD. Accordingly, utilities of GAM4969 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4971 FOS TTCCTTCAGTTCAGG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
GAACCCT Accession NM_005252.2) is a GAM4971 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4971 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4971 is therefore inhibition of FOS, a GAM4971 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM4971 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM4975 GFAP TTCCCTCATTCTCCA GFAP (Accession NM_002055.2) is a GAM4975 target gene. GFAP A A
CCCAGTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4975 is therefore inhibition of GFAP. Accordingly, utilities of GAM4975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM4975 PLAU TTCCCTCATTCTCCA Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A
CCCAGTC is another GAM4975 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4975 is therefore inhibition of PLAU, a GAM4975 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM4975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM4975 TNFRSF6 TTCCCTCATTCTCCA A A CCCAGTC TNFRSF6 (Accession NM_152877.1) is another GAM4975 target gene. TNFRSF6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4975 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM4975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM4986 HD TCTGCTGTGATGGAC A A ACTTGTA HD (Accession NM_002111.3) is a GAM4986 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4986 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM4986 is therefore inhibition of HD. Accordingly, utilities of GAM4986 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM4986 HTR2C TCTGCTGTGATGGAC A A ACTTGTA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM4986 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4986 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4986 is therefore inhibition of HTR2C, a GAM4986 target gene which activates phospholipase C and

regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM4986 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM4986 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGTA NM_000618.2) is another GAM4986 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4986 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4986 is therefore inhibition of IGF1, a GAM4986 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM4986 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM4986 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM4986 target gene. A A

ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM4986 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4986 is therefore inhibition of PSEN2. Accordingly, utilities of GAM4986 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM4986 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM4986 target gene. A A

ACTTGTA TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM4986 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM4986 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM4986 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM5000 APBB2 CAGTGCTGAGTATGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

AAGGCCC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM5000 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5000 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5000 is therefore inhibition of APBB2, a GAM5000 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5000 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5008 ADAM17 CCTGGAGTGACAGGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

GTAGCCT factor, (ADAM17, Accession NM_003183.3) is a GAM5008 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5008 is therefore inhibition of ADAM17, a GAM5008 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM5008 GLUL CCTGGAGTGACAGGT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

GTAGCCT NM_002065.3) is another GAM5008 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5008 is therefore inhibition of GLUL, a GAM5008 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM5008 IAPP CCTGGAGTGACAGGT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A GTAGCCT another GAM5008 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5008 is therefore inhibition of IAPP, a GAM5008 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5008 PLAU CCTGGAGTGACAGGT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A GTAGCCT is another GAM5008 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5008 is therefore inhibition of PLAU, a GAM5008 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM5008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has

been established by previous studies, as described hereinabove with reference to GAM282.

GAM5008 MPO GCTGCTGCCTCAACA Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM5008 B A
TTTTAGG target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5008 is therefore inhibition of MPO, a GAM5008 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM5008 NCKAP1 GCTGCTGCCTCAACA NCKAP1 (Accession NM_013436.2) is another GAM5008 target gene. B A
TTTTAGG NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5008 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5008 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM5008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM5011 CAV1 CATATCTCCAGGTTC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
TGCTGGA NM_001753.3) is a GAM5011 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5011 is therefore inhibition of CAV1, a GAM5011 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5011 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM5011 CRAT CATATCTCCAGGTTC TGCTGGA A A Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is another GAM5011 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5011 is therefore inhibition of CRAT, a GAM5011 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5011 GLUL TCCTTAGGACCTAGA GGTAGTA B A Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession NM_002065.3) is another GAM5011 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5011 is therefore inhibition of GLUL, a GAM5011 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM5035 APPBP2 AGGTCCTCACACACA GCTCTGC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM5035 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM5035 is therefore inhibition of APPBP2, a GAM5035 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5035 MPO AGGTCCTCACACACA Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM5035 A A
GCTCTGC target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5035 is therefore inhibition of MPO, a GAM5035 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM5035 OGDH AGGTCCTCACACACA Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A
GCTCTGC NM_002541.1) is another GAM5035 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5035 is therefore inhibition of OGDH, a GAM5035 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM5035 PRND AGGTCCTCACACACA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GCTCTGC another GAM5035 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5035 is therefore inhibition of PRND, a GAM5035 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5035 DHCR24 GCAGGCTGGTTGGTG 24- dehydrocholesterol Reductase (DHCR24, Accession B A

AGGCAAA NM_014762.1) is another GAM5035 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5035 is therefore inhibition of DHCR24, a GAM5035 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5035 GLUL GCAGGCTGGTTGGTG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession B A

AGGCAAA NM_002065.3) is another GAM5035 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5035 is therefore inhibition of GLUL, a GAM5035 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM5035 B A SNCG GCAGGCTGGTTGGTG AGGCAAA SYNUCLEIN, GAMMA (SNCG, Accession NM_003087.1) is another GAM5035 target gene. SNCG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5035 is therefore inhibition of SNCG, a GAM5035 target gene which plays a role in neurofilament network integrity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCG.The function of SNCG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM5048 A A GFAP TTTACAGATGGCAAA GATCTGG GFAP (Accession NM_002055.2) is a GAM5048 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5048 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5048 is therefore inhibition of GFAP. Accordingly, utilities of GAM5048 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM5048 A A IGF1 TTTACAGATGGCAAA GATCTGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5048 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5048 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5048 is therefore inhibition of IGF1, a GAM5048 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities

of GAM5048 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5058 FHL2 ACTGCACTCCAGCCT A A GGGTGAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM5058 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5058 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5058 is therefore inhibition of FHL2, a GAM5058 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5058 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5058 IGF1 ACTGCACTCCAGCCT A A GGGTGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5058 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5058 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5058 is therefore inhibition of IGF1, a GAM5058 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5058 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5058 PRND ACTGCACTCCAGCCT A A GGGTGAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM5058 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM5058 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5058 is therefore inhibition of PRND, a GAM5058 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5058 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5082 IAPP TAGAGTTATATGATG TGCTAGT A A Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a GAM5082 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5082 is therefore inhibition of IAPP, a GAM5082 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5085 HD TCTGCTGTGATGGAC ACTTGTA A A HD (Accession NM_002111.3) is a GAM5085 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5085 is therefore inhibition of HD. Accordingly, utilities of GAM5085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5085 HTR2C TCTGCTGTGATGGAC ACTTGTA A A 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM5085 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING

SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5085 is therefore inhibition of HTR2C, a GAM5085 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM5085 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A ACTTGTA NM_000618.2) is another GAM5085 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5085 is therefore inhibition of IGF1, a GAM5085 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5085 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM5085 target gene. A A ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5085 is therefore inhibition of PSEN2. Accordingly, utilities of GAM5085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM5085 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM5085 target gene. A A ACTTGTA TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA

encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5085 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5085 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM5085 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM5090 A A CTSB GTGCTGG CGGCAAGATGCCGGA CTSB (Accession NM_147783.1) is a GAM5090 target gene. CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5090 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5090 is therefore inhibition of CTSB. Accordingly, utilities of GAM5090 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM5090 A A NGB GTGCTGG CGGCAAGATGCCGGA Neuroglobin (NGB, Accession NM_021257.2) is another GAM5090 target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5090 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5090 is therefore inhibition of NGB, a GAM5090 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5090 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5127 A A BACE AGACCCT TCCAGGGTGGGCCTC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) is a GAM5127 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5127 is therefore inhibition of BACE, a GAM5127 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM5127 CNTF TCCAGGGTGGGCCTC AGACCCT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM5127 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5127 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5127 is therefore inhibition of CNTF, a GAM5127 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM5127 PSEN1 TCCAGGGTGGGCCTC AGACCCT PSEN1 (Accession NM_007318.1) is another GAM5127 target gene. PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5127 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5127 is therefore inhibition of PSEN1. Accordingly, utilities of GAM5127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM5142 ACE CACCCAGGCTGGAGT GCAGTGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM5142 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a A A

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5142 is therefore inhibition of ACE, a GAM5142 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5142 ADAM17 CACCCAGGCTGGAGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
GCAGTGG factor, (ADAM17, Accession NM_021832.1) is another GAM5142 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of ADAM17, a GAM5142 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM5142 FLNB CACCCAGGCTGGAGT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
GCAGTGG NM_001457.1) is another GAM5142 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of FLNB, a GAM5142 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function

of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM5142 FPRL1 CACCCAGGCTGGAGT FPRL1 (Accession NM_001462.1) is another GAM5142 target gene. A A

GCAGTGG FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of FPRL1. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM5142 IAPP CACCCAGGCTGGAGT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

GCAGTGG another GAM5142 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of IAPP, a GAM5142 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5142 TGFB1 CACCCAGGCTGGAGT TGFB1 (Accession NM_000660.1) is another GAM5142 target gene. A A

GCAGTGG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of TGFB1. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM5142 ACE TCACTGCAACCTCTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 B A
CTTCTGG (ACE, Accession NM_152831.1) is another GAM5142 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of ACE, a GAM5142 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5142 CTSK TCACTGCAACCTCTG CTSK (Accession NM_000396.2) is another GAM5142 target gene. B A
CTTCTGG CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of CTSK. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM5142 HTR2A TCACTGCAACCTCTG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession B A
CTTCTGG NM_000621.1) is another GAM5142 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of HTR2A, a GAM5142 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has

been established by previous studies, as described hereinabove with reference to GAM593.

GAM5142 HTR2C TCACTGCAACCTCTG CTTCTGG B A 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM5142 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of HTR2C, a GAM5142 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM5142 IAPP TCACTGCAACCTCTG CTTCTGG B A Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM5142 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of IAPP, a GAM5142 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5142 MTNR1A TCACTGCAACCTCTG CTTCTGG B A Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM5142 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5142 is therefore inhibition of

MTNR1A, a GAM5142 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM5209 ABCD1 CCAGCCTGAGGTTCC ABCD1 (Accession NM_000033.2) is a GAM5209 target gene.
ABCD1 A A

TGGAGGG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5209 is therefore inhibition of ABCD1. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM5209 APBA1 CCAGCCTGAGGTTCC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A
A

TGGAGGG 1 (X11) (APBA1, Accession NM_001163.2) is another GAM5209 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of APBA1, a GAM5209 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5209 APOC1 CCAGCCTGAGGTTCC Apolipoprotein C- I (APOC1, Accession NM_001645.2) is another
A A

TGGAGGG GAM5209 target gene. APOC1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APOC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APOC1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of APOC1, a GAM5209 target gene which appears to modulate the interaction of apoe with beta- migrating vldl and inhibit binding of beta- vldl to the ldl receptor- related protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APOC1.The function of APOC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM5209 APPBP2 CCAGCCTGAGGTTCC TGGAGGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM5209 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5209 is therefore inhibition of APPBP2, a GAM5209 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5209 CRAT CCAGCCTGAGGTTCC TGGAGGG Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is another GAM5209 target gene. CRAT BINDING SITE1 through CRAT BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CRAT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE1 through CRAT BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5209 is therefore inhibition of CRAT, a GAM5209 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5209 CTSB CCAGCCTGAGGTTCC CTSB (Accession NM_147780.1) is another GAM5209 target gene. A A

TGGAGGG CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of CTSB. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM5209 DHCR24 CCAGCCTGAGGTTCC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGGAGGG NM_014762.1) is another GAM5209 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of DHCR24, a GAM5209 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5209 DLST CCAGCCTGAGGTTCC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TGGAGGG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM5209 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of DLST, a GAM5209 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM5209 A A GFAP CCAGCCTGAGGTTCC TGGAGGG — GFAP (Accession NM_002055.2) is another GAM5209 target gene. GFAP BINDING SITE1 and GFAP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 and GFAP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of GFAP. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM5209 A A NGB CCAGCCTGAGGTTCC TGGAGGG — Neuroglobin (NGB, Accession NM_021257.2) is another GAM5209 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of NGB, a GAM5209 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5209 A A PRND CCAGCCTGAGGTTCC TGGAGGG — Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM5209 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of PRND, a GAM5209 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5209 A A TGGAGGG SLC17A7 CCAGCCTGAGGTTCC SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession NM_020309.1) is another GAM5209 target gene. SLC17A7 BINDING SITE1 and SLC17A7 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SLC17A7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE1 and SLC17A7 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of SLC17A7, a GAM5209 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5209 A A TGGAGGG TGFB1 CCAGCCTGAGGTTCC TGFB1 (Accession NM_000660.1) is another GAM5209 target gene. TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of TGFB1. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM5209 A A TGGAGGG TRPM2 CCAGCCTGAGGTTCC TRPM2 (Accession NM_003307.1) is another GAM5209 target gene. TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5209 is therefore inhibition of

TRPM2, a GAM5209 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM5217 HD TGTACAAGGGGCTCA HD (Accession NM_002111.3) is a GAM5217 target gene. HD BINDING A A
GCCAGCC SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5217 is therefore inhibition of HD. Accordingly, utilities of GAM5217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5217 TRPM2 TGTACAAGGGGCTCA TRPM2 (Accession NM_003307.1) is another GAM5217 target gene. A A
GCCAGCC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5217 is therefore inhibition of TRPM2, a GAM5217 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM5217 OLR1 GATGTTGATGAGCTT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 B A
GTGTGCA (OLR1, Accession NM_002543.1) is another GAM5217 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5217 is therefore inhibition of OLR1, a GAM5217 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is

associated with Alzheimer. Accordingly, utilities of GAM5217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5222 APBB2 TCCTCATCTTTGAGT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CCCAGCG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM5222 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5222 is therefore inhibition of APBB2, a GAM5222 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5222 TGFB1 TCCTCATCTTTGAGT TGFB1 (Accession NM_000660.1) is another GAM5222 target gene.
A A

CCCAGCG TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5222 is therefore inhibition of TGFB1. Accordingly, utilities of GAM5222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM5222 APBB2 GAGCTAAGGATAGAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member B A

GTGAGGA 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM5222 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5222 is therefore inhibition of APBB2, a GAM5222 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5222 APLP1 GAGCTAAGGATAGAG Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession B A
GTGAGGA NM_005166.2) is another GAM5222 target gene. APLP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5222 is therefore inhibition of APLP1, a GAM5222 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM5222 MAPK10 GAGCTAAGGATAGAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession B A
GTGAGGA NM_138981.1) is another GAM5222 target gene. MAPK10 BINDING SITE1 and MAPK10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPK10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE1 and MAPK10 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5222 is therefore inhibition of MAPK10, a GAM5222 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove

with reference to GAM55.

GAM5222 MPO GAGCTAAGGATAGAG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM5222 B A
GTGAGGA target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5222 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5222 is therefore inhibition of MPO, a GAM5222 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5222 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM5254 FHL2 TGAGTGTATGTGTGA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GAGAGAA a GAM5254 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5254 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5254 is therefore inhibition of FHL2, a GAM5254 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5254 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5254 IL1B TGAGTGTATGTGTGA Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A
GAGAGAA GAM5254 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5254 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5254 is therefore inhibition of

IL1B, a GAM5254 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5254 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM5254 SNCAIP TGAGTGTATGTGTGA GAGAGAA Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is another GAM5254 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5254 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5254 is therefore inhibition of SNCAIP, a GAM5254 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5254 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM5266 ACE TCACTGCAACCTCCA CCTCCCG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM5266 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5266 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5266 is therefore inhibition of ACE, a GAM5266 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5266 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5266 IAPP TCACTGCAACCTCCA CCTCCCG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM5266 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences A A

of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5266 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5266 is therefore inhibition of IAPP, a GAM5266 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5266 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5270 IGF1 TCAGTGCAAACTAAG CAGGGCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM5270 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5270 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5270 is therefore inhibition of IGF1, a GAM5270 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5270 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5270 MAPK10 TCAGTGCAAACTAAG CAGGGCA Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_002753.2) is another GAM5270 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5270 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5270 is therefore inhibition of MAPK10, a GAM5270 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5270 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions,

has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5272 APPBP2 TTAACTGAGAGGATC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGAGTAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM5272 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5272 is therefore inhibition of APPBP2, a GAM5272 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5272 DLST TTAACTGAGAGGATC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A
TGAGTAG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM5272 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5272 is therefore inhibition of DLST, a GAM5272 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM5272 ARHA CTCACCAGTTACTCT Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) B A
CCAGTTG is another GAM5272 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5272 is therefore inhibition of ARHA, a GAM5272 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM5272 PSEN1 CTCACCAGTTACTCT PSEN1 (Accession NM_007318.1) is another GAM5272 target gene. B A

CCAGTTG PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5272 is therefore inhibition of PSEN1. Accordingly, utilities of GAM5272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM5278 MAPT TACCCCGATAGGGAG Microtubule- associated Protein Tau (MAPT, Accession A A

GGTGGGG NM_016835.1) is a GAM5278 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5278 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5278 is therefore inhibition of MAPT, a GAM5278 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5278 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM5278 DHCR24 ACCATCTTCCCTTTC 24- dehydrocholesterol Reductase (DHCR24, Accession B A

TCGAGTA NM_014762.1) is another GAM5278 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5278 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5278 is therefore inhibition of DHCR24, a GAM5278 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5278 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5278 DSCR1 ACCATCTTCCCTTTC Down Syndrome Critical Region Gene 1 (DSCR1, Accession B A
TCGAGTA NM_004414.3) is another GAM5278 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5278 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5278 is therefore inhibition of DSCR1, a GAM5278 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5278 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM5292 FLNB GCCCTGTTGACCAGA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
ATTTGTT NM_001457.1) is a GAM5292 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5292 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5292 is therefore inhibition of FLNB, a GAM5292 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5292 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM5324 MME GATATCATGGGAAGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGTACTT enkephalinase, (MME, Accession NM_007288.1) is a GAM5324 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5324 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5324 is therefore inhibition of MME, a GAM5324 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5329 BCHE AGCAAGATGGTAGCA BCHE (Accession NM_000055.1) is a GAM5329 target gene. BCHE A A

TTGGAGA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5329 is therefore inhibition of BCHE. Accordingly, utilities of GAM5329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM5329 HD AGCAAGATGGTAGCA HD (Accession NM_002111.3) is another GAM5329 target gene. HD A A

TTGGAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5329 is therefore inhibition of HD. Accordingly, utilities of GAM5329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5329 MME AGCAAGATGGTAGCA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TTGGAGA enkephalinase, (MME, Accession NM_000902.2) is another GAM5329 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5329 is therefore inhibition of MME, a GAM5329 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5329 PRNP AGCAAGATGGTAGCA Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A

TTGGAGA Strausler- (PRNP, Accession NM_000311.1) is another GAM5329 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5329 is therefore inhibition of PRNP, a GAM5329 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM5340 MAPK10 TGATTGGCAATGGTT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

ATGACGG NM_138980.1) is a GAM5340 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5340 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5340 is therefore inhibition of MAPK10, a GAM5340 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5340 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5342 PSEN1 GTTCTGCTGAGATAC PSEN1 (Accession NM_000021.2) is a GAM5342 target gene. PSEN1 A A GTGCTCT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5342 is therefore inhibition of PSEN1. Accordingly, utilities of GAM5342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM5342 TNFRSF5 GTTCTGCTGAGATAC TNFRSF5 (Accession NM_001250.3) is another GAM5342 target gene. A A GTGCTCT TNFRSF5 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5342 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5342 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM5342 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM5354 FOS TACAGCTCTGCTTCT V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A GGCTCAC Accession NM_005252.2) is a GAM5354 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5354 is therefore inhibition of FOS, a GAM5354 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM5354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM846.

GAM5354 SNCB TACAGCTCTGCTTCT GGCTCAC Synuclein, Beta (SNCB, Accession NM_003085.2) is another GAM5354 target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5354 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5354 is therefore inhibition of SNCB, a GAM5354 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5370 CAV1 AAAGTGGCTGGAGTG GAGTCTT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM5370 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5370 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5370 is therefore inhibition of CAV1, a GAM5370 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM5370 IDE AAAGTGGCTGGAGTG GAGTCTT Insulin- degrading Enzyme (IDE, Accession NM_004969.1) is another GAM5370 target gene. IDE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IDE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IDE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5370 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5370 is therefore inhibition of IDE, a GAM5370 target gene which may play a role in the cellular

processing of insulin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IDE.The function of IDE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2770.

GAM5370 SLC6A4 AAAGTGGCTGGAGTG GAGTCTT Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM5370 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5370 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5370 is therefore inhibition of SLC6A4, a GAM5370 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM5371 ACE CTCACTGCAACCTCC GCCTCCC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM5371 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5371 is therefore inhibition of ACE, a GAM5371 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5371 ADAM10 CTCACTGCAACCTCC GCCTCCC A Disintegrin and Metalloproteinase Domain 10 (ADAM10, Accession NM_001110.1) is another GAM5371 target gene. ADAM10 BINDING SITE is a target binding site found in the 5` untranslated A A

region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of ADAM10, a GAM5371 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM5371 IAPP CTCACTGCAACCTCC A A GCCTCCC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM5371 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of IAPP, a GAM5371 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5371 MPO CTCACTGCAACCTCC A A GCCTCCC Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM5371 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of MPO, a GAM5371 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM1032.

GAM5371 NCKAP1 CTCACTGCAACCTCC NCKAP1 (Accession NM_013436.2) is another GAM5371 target gene. A A

GCCTCCC NCKAP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM5371 NOTCH1 CTCACTGCAACCTCC Notch (Drosophila) Homolog 1 (translocation- associated) A A

GCCTCCC (NOTCH1, Accession NM_017617.2) is another GAM5371 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of NOTCH1, a GAM5371 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM5371 ACE CCCAGGCTGGAGTGC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 B A

AGTGGTG (ACE, Accession NM_152831.1) is another GAM5371 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of ACE, a GAM5371 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5371 ADAM17 CCCAGGCTGGAGTGC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis B A

AGTGGTG factor, (ADAM17, Accession NM_003183.3) is another GAM5371 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of ADAM17, a GAM5371 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM5371 FLNB CCCAGGCTGGAGTGC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession B A

AGTGGTG NM_001457.1) is another GAM5371 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of FLNB, a GAM5371 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM5371 FPRL1 CCCAGGCTGGAGTGC FPRL1 (Accession NM_001462.1) is another GAM5371 target gene. B A

AGTGGTG FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of FPRL1. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM5371 HTR2A CCCAGGCTGGAGTGC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession B A
AGTGGTG NM_000621.1) is another GAM5371 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of HTR2A, a GAM5371 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM5371 IAPP CCCAGGCTGGAGTGC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is B A
AGTGGTG another GAM5371 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of IAPP, a GAM5371 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5371 NOTCH1 CCCAGGCTGGAGTGC Notch (Drosophila) Homolog 1 (translocation- associated) B A
AGTGGTG (NOTCH1, Accession NM_017617.2) is another GAM5371 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of NOTCH1, a GAM5371 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM5371 TGFB1 CCCAGGCTGGAGTGC TGFB1 (Accession NM_000660.1) is another GAM5371 target gene. B A

AGTGGTG TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TGFB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5371 is therefore inhibition of TGFB1. Accordingly, utilities of GAM5371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM5374 ADAMTS5 TACTCATTTATGCAT A Disintegrin- like and Metalloprotease (reprolysin type) with A A TGTTTTG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM5374 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5374 is therefore inhibition of ADAMTS5, a GAM5374 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM5374 CASP3 TACTCATTTATGCAT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

TGTTTTG Accession NM_004346.2) is another GAM5374 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5374 is therefore inhibition of CASP3, a GAM5374 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM5374 MME TACTCATTTATGCAT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
TGTTTTG enkephalinase, (MME, Accession NM_007288.1) is another GAM5374 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5374 is therefore inhibition of MME, a GAM5374 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5385 IGF1 TCACAGTGAACCGGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CTCTTTC NM_000618.2) is a GAM5385 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5385 is therefore inhibition of IGF1, a GAM5385 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of

GAM5385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5385 MTNR1A TCACAGTGAACCGGT A A CTCTTTC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM5385 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5385 is therefore inhibition of MTNR1A, a GAM5385 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM5415 ACE TGATCCTCTGGCTTC A A AGCCTCC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM5415 target gene. ACE BINDING SITE1 and ACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE1 and ACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5415 is therefore inhibition of ACE, a GAM5415 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5415 HTR2A TGATCCTCTGGCTTC A A AGCCTCC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM5415 target gene. HTR2A BINDING SITE1 and HTR2A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE1 and HTR2A BINDING

SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5415 is therefore inhibition of HTR2A, a GAM5415 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM5415 MTNR1A TGATCCTCTGGCTTC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

AGCCTCC another GAM5415 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5415 is therefore inhibition of MTNR1A, a GAM5415 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM5415 TGFB1 TGATCCTCTGGCTTC TGFB1 (Accession NM_000660.1) is another GAM5415 target gene. A A

AGCCTCC TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5415 is therefore inhibition of TGFB1. Accordingly, utilities of GAM5415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM5422 CASP3 ATGAGAGTAGGAGTT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

TGGGCTC Accession NM_004346.2) is a GAM5422 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5422 is therefore inhibition of CASP3, a GAM5422 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM5422 IGF1 ATGAGAGTAGGAGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A TGGGCTC NM_000618.2) is another GAM5422 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5422 is therefore inhibition of IGF1, a GAM5422 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5422 MAPT ATGAGAGTAGGAGTT Microtubule- associated Protein Tau (MAPT, Accession A A TGGGCTC NM_016835.1) is another GAM5422 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5422 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5422 is therefore inhibition of MAPT, a GAM5422 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5422 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM5444 HD TGGAGACCTGTGTGG HD (Accession NM_002111.3) is a GAM5444 target gene. HD BINDING A A

TTTGTGG SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5444 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5444 is therefore inhibition of HD. Accordingly, utilities of GAM5444 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5444 TNFRSF6 TGGAGACCTGTGTGG TNFRSF6 (Accession NM_152876.1) is another GAM5444 target gene. A A

TTTGTGG TNFRSF6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5444 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5444 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM5444 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM5454 DLST ATACCAGCACAGTGG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

ATGGGGA oxo- glutarat (DLST, Accession NM_001933.2) is a GAM5454 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5454 is therefore inhibition of DLST, a GAM5454 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM240.

GAM5454 MAPT ATACCAGCACAGTGG ATGGGGA Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM5454 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5454 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5454 is therefore inhibition of MAPT, a GAM5454 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM5454 NGB ATACCAGCACAGTGG ATGGGGA Neuroglobin (NGB, Accession NM_021257.2) is another GAM5454 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5454 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5454 is therefore inhibition of NGB, a GAM5454 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5486 APPBP2 TGAGGAAGGTGTGAG AAATGAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM5486 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5486 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5486 is therefore inhibition of APPBP2, a

GAM5486 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5486 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5486 IL1A TGAGGAAGGTGTGAG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

AAATGAG GAM5486 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5486 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5486 is therefore inhibition of IL1A, a GAM5486 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5486 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5498 DLST TTCACAGTGGCTGAA Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GCTGTTC oxo- glutarat (DLST, Accession NM_001933.2) is a GAM5498 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5498 is therefore inhibition of DLST, a GAM5498 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM5498 HD TTCACAGTGGCTGAA HD (Accession NM_002111.3) is another GAM5498 target gene. HD A A

GCTGTTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5498 is therefore inhibition of HD. Accordingly, utilities of GAM5498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5498 OGDH TTCACAGTGGCTGAA Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A

GCTGTTC NM_002541.1) is another GAM5498 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5498 is therefore inhibition of OGDH, a GAM5498 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM5512 ACE GGCCCAGGAGGGGGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GAAAGGC (ACE, Accession NM_152830.1) is a GAM5512 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5512 is therefore inhibition of ACE, a GAM5512 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5512 ADAMTS5 GGCCCAGGAGGGGGA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GAAAGGC Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM5512 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of ADAMTS5, a GAM5512 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM5512 APBB1 GGCCCAGGAGGGGGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAAAGGC 1 (Fe65) (APBB1, Accession NM_145689.1) is another GAM5512 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of APBB1, a GAM5512 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5512 APBB2 GGCCCAGGAGGGGGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAAAGGC 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM5512 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of APBB2, a GAM5512 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5512 APLP2 GGCCCAGGAGGGGGA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A
GAAAGGC NM_001642.1) is another GAM5512 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of APLP2, a GAM5512 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM5512 BACE2 GGCCCAGGAGGGGGA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GAAAGGC NM_138992.1) is another GAM5512 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of BACE2, a GAM5512 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5512 DHCR24 GGCCCAGGAGGGGGA 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GAAAGGC NM_014762.1) is another GAM5512 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of DHCR24, a GAM5512 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5512 A A FOS GGCCCAGGAGGGGGA GAAAGGC V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, Accession NM_005252.2) is another GAM5512 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of FOS, a GAM5512 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM5512 A A GFAP GGCCCAGGAGGGGGA GAAAGGC GFAP (Accession NM_002055.2) is another GAM5512 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of GFAP. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with GFAP.

GAM5512 IGF1 GGCCCAGGAGGGGGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GAAAGGC NM_000618.2) is another GAM5512 target gene. IGF1 BINDING SITE1 through IGF1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 through IGF1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of IGF1, a GAM5512 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5512 IL1A GGCCCAGGAGGGGGA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
GAAAGGC GAM5512 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of IL1A, a GAM5512 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5512 OGDH GGCCCAGGAGGGGGA Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A
GAAAGGC NM_002541.1) is another GAM5512 target gene. OGDH BINDING SITE1 and OGDH BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by OGDH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE1 and OGDH BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM5512 is therefore inhibition of OGDH, a GAM5512 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM5512 PRND GGCCCAGGAGGGGGA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GAAAGGC another GAM5512 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5512 is therefore inhibition of PRND, a GAM5512 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5514 APLP1 TGAGGAGGTGCTACC Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession A A AGCGTCT NM_005166.2) is a GAM5514 target gene. APLP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5514 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5514 is therefore inhibition of APLP1, a GAM5514 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5514 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM5526 MAPK10 AATGCTGTGCCAGAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A CTGCACC NM_002753.2) is a GAM5526 target gene. MAPK10 BINDING SITE is a

target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5526 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5526 is therefore inhibition of MAPK10, a GAM5526 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5526 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5526 THOP1 AATGCTGTGCCAGAG Thimet Oligopeptidase 1 (THOP1, Accession NM_003249.2) is
A A
CTGCACC another GAM5526 target gene. THOP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by THOP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of THOP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5526 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5526 is therefore inhibition of THOP1, a GAM5526 target gene which involves in the metabolism of neuropeptide and in cytoplasmic peptide degradation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5526 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with THOP1.The function of THOP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM520.

GAM5560 BACE TGAAATGCTTTTAGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1)
A A
ACACTGC is a GAM5560 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5560 is therefore inhibition of BACE, a GAM5560 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM5560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM5560 A A BCHE TGAAATGCTTTTAGG ACACTGC BCHE (Accession NM_000055.1) is another GAM5560 target gene. BCHE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5560 is therefore inhibition of BCHE. Accordingly, utilities of GAM5560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM5560 A A CAV2 TGAAATGCTTTTAGG ACACTGC Caveolin 2 (CAV2, Accession NM_001233.2) is another GAM5560 target gene. CAV2 BINDING SITE1 and CAV2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CAV2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE1 and CAV2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5560 is therefore inhibition of CAV2, a GAM5560 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5560 A A CNTF TGAAATGCTTTTAGG ACACTGC Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM5560 target gene. CNTF BINDING SITE1 and CNTF BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CNTF, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE1 and CNTF BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5560 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5560 is therefore inhibition of CNTF, a GAM5560 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM5560 FLNB TGAAATGCTTTTAGG ACACTGC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM5560 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5560 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5560 is therefore inhibition of FLNB, a GAM5560 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM5560 HTR2A TGAAATGCTTTTAGG ACACTGC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM5560 target gene. HTR2A BINDING SITE1 and HTR2A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE1 and HTR2A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5560 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5560 is therefore inhibition of HTR2A, a GAM5560 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5560 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM5597 IGF1 TTGTTTTAGAAGAAG GTCAGAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM5597 target gene. IGF1 BINDING SITE is a target A A

binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5597 is therefore inhibition of IGF1, a GAM5597 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5597 PRND TTGTTTTAGAAGAAG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GTCAGAA another GAM5597 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5597 is therefore inhibition of PRND, a GAM5597 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5597 PSEN1 TTGTTTTAGAAGAAG PSEN1 (Accession NM_000021.2) is another GAM5597 target gene. A A GTCAGAA PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5597 is therefore inhibition of PSEN1. Accordingly, utilities of GAM5597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM5615 ACE AAATCCAGAATCTAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A ACTGAAT (ACE, Accession NM_152831.1) is a GAM5615 target gene. ACE BINDING

SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5615 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5615 is therefore inhibition of ACE, a GAM5615 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5615 FOS ATTTGGGGAAATGTG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, B A

TTTCTGG Accession NM_005252.2) is another GAM5615 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5615 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5615 is therefore inhibition of FOS, a GAM5615 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM5615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM5615 NCKAP1 ATTTGGGGAAATGTG NCKAP1 (Accession NM_013436.2) is another GAM5615 target gene. B A

TTTCTGG NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5615 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5615 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM5615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM5617 MME ACCAGCTGTGTGAAC Membrane Metallo- endopeptidase (neutral endopeptidase, A A
TTAGGAA enkephalinase, (MME, Accession NM_000902.2) is a GAM5617 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5617 is therefore inhibition of MME, a GAM5617 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5617 MAPT CTTCCTGGGTTCATA Microtubule- associated Protein Tau (MAPT, Accession B A
TCCTGGT NM_016835.1) is another GAM5617 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5617 is therefore inhibition of MAPT, a GAM5617 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM5623 CAV2 GGAAGAATGTGCTTT Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM5623 target A A
TGTTGTT gene. CAV2 BINDING SITE1 and CAV2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CAV2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE1 and CAV2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5623 is therefore inhibition of CAV2, a GAM5623 target gene which may function as an accessory protein in

conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5623 CNTF GGAAGAATGTGCTTT TGTTGTT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM5623 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5623 is therefore inhibition of CNTF, a GAM5623 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM5623 ESR2 GGAAGAATGTGCTTT TGTTGTT Estrogen Receptor 2 (ER beta) (ESR2, Accession NM_001437.1) is another GAM5623 target gene. ESR2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ESR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ESR2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5623 is therefore inhibition of ESR2, a GAM5623 target gene which transcriptional activator involved in regulation of reproduction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ESR2.The function of ESR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM4188.

GAM5623 IGF1 GGAAGAATGTGCTTT TGTTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5623 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as A A

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5623 is therefore inhibition of IGF1, a GAM5623 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5623 IL1A GGAAGAATGTGCTTT TGTTGTT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM5623 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5623 is therefore inhibition of IL1A, a GAM5623 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5623 MME GGAAGAATGTGCTTT TGTTGTT Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is another GAM5623 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5623 is therefore inhibition of MME, a GAM5623 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases

and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5623 MTNR1A GGAAGAATGTGCTTT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

TGTTGTT another GAM5623 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5623 is therefore inhibition of MTNR1A, a GAM5623 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM5623 SNCAIP GGAAGAATGTGCTTT Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, A A

TGTTGTT Accession NM_005460.1) is another GAM5623 target gene. SNCAIP BINDING SITE1 and SNCAIP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SNCAIP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE1 and SNCAIP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5623 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5623 is therefore inhibition of SNCAIP, a GAM5623 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM5640 DHCR24 CTTTTCCTGGGTCTG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GGCTGTG NM_014762.1) is a GAM5640 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5640 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5640 is therefore inhibition of DHCR24, a GAM5640 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5640 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5640 LRP1 CTTTTCCTGGGTCTG GGCTGTG Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM5640 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5640 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5640 is therefore inhibition of LRP1, a GAM5640 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5640 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM5653 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM5653 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5653 is therefore inhibition of APPBP2, a GAM5653 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5653 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM5653 target gene. BACE2 BINDING SITE is a A A

target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of BACE2, a GAM5653 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5653 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM5653 target gene.
A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of BCHE. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM5653 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM5653 target gene.
A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of CTSB. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM5653 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM5653 target gene.
A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of CTSK. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM5653 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM5653 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of FHL2, a GAM5653 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5653 HD CACTGCACTCCAGCC A A TGGGCAA HD (Accession NM_002111.3) is another GAM5653 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of HD. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5653 IGF1 CACTGCACTCCAGCC A A TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5653 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING

SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of IGF1, a GAM5653 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5653 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A TGGGCAA GAM5653 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of IL1A, a GAM5653 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5653 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM5653 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5653 is therefore inhibition of NGB, a GAM5653 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM281.

GAM5653 PRND CACTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM5653 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5653 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5653 is therefore inhibition of PRND, a GAM5653 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5653 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5654 PIN1 TACAAATTCCTGGGT CTCCTGG Protein (peptidyl- prolyl cis/trans isomerase) NIMA-interacting 1 (PIN1, Accession NM_006221.1) is a GAM5654 target gene. PIN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PIN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5654 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5654 is therefore inhibition of PIN1, a GAM5654 target gene which intervenes in cell cycle regulation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5654 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PIN1.The function of PIN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM5654 S100B TACAAATTCCTGGGT CTCCTGG S100 Calcium- binding Protein, Beta (neural) (S100B, Accession NM_006272.1) is another GAM5654 target gene. S100B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5654 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5654 is therefore inhibition of S100B, a GAM5654 target gene which weakly binds calcium but binds

zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5654 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM5657 FHL2 ACTGCACTCCTGCCT A A AGGTGAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM5657 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5657 is therefore inhibition of FHL2, a GAM5657 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5657 IGF1 ACTGCACTCCTGCCT A A AGGTGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5657 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5657 is therefore inhibition of IGF1, a GAM5657 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5657 PRND ACTGCACTCCTGCCT A A AGGTGAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM5657 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5657 is therefore inhibition of PRND, a GAM5657 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5657 PRNP ACTGCACTCCTGCCT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A

AGGTGAC Strausler- (PRNP, Accession NM_000311.1) is another GAM5657 target gene. PRNP BINDING SITE1 and PRNP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRNP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE1 and PRNP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5657 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5657 is therefore inhibition of PRNP, a GAM5657 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5657 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM5673 IGF1 GGAAAGTTAAAGATG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TATGTAT NM_000618.2) is a GAM5673 target gene. IGF1 BINDING SITE1 through IGF1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 through IGF1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5673 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5673 is therefore inhibition of IGF1, a GAM5673 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of

GAM5673 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5673 MAPK10 GGAAAGTTAAAGATG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

TATGTAT NM_138981.1) is another GAM5673 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5673 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5673 is therefore inhibition of MAPK10, a GAM5673 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5673 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5691 ACE GGCCCAGGAGGGGGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GAAAGGC (ACE, Accession NM_152830.1) is a GAM5691 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5691 is therefore inhibition of ACE, a GAM5691 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5691 ADAMTS5 GGCCCAGGAGGGGGA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GAAAGGC Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM5691 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of ADAMTS5, a GAM5691 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM5691 APBB1 GGCCCAGGAGGGGGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAAAGGC 1 (Fe65) (APBB1, Accession NM_145689.1) is another GAM5691 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of APBB1, a GAM5691 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5691 APBB2 GGCCCAGGAGGGGGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAAAGGC 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM5691 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of APBB2, a GAM5691 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5691 APLP2 GGCCCAGGAGGGGGA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

GAAAGGC NM_001642.1) is another GAM5691 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of APLP2, a GAM5691 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM5691 BACE2 GGCCCAGGAGGGGGA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GAAAGGC NM_138992.1) is another GAM5691 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of BACE2, a GAM5691 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5691 DHCR24 GGCCCAGGAGGGGGA 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GAAAGGC NM_014762.1) is another GAM5691 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of DHCR24, a GAM5691 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5691 FOS GGCCCAGGAGGGGGA V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
GAAAGGC Accession NM_005252.2) is another GAM5691 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of FOS, a GAM5691 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM5691 GFAP GGCCCAGGAGGGGGA GFAP (Accession NM_002055.2) is another GAM5691 target gene. A A
GAAAGGC GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of GFAP. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM5691 IGF1 GGCCCAGGAGGGGGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GAAAGGC NM_000618.2) is another GAM5691 target gene. IGF1 BINDING SITE1 through IGF1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 through IGF1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of IGF1, a GAM5691 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5691 IL1A GGCCCAGGAGGGGGA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

GAAAGGC GAM5691 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of IL1A, a GAM5691 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5691 OGDH GGCCCAGGAGGGGGA Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A

GAAAGGC NM_002541.1) is another GAM5691 target gene. OGDH BINDING SITE1 and OGDH BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by OGDH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE1 and OGDH BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of

OGDH, a GAM5691 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM5691 PRND GGCCCAGGAGGGGGA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GAAAGGC another GAM5691 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5691 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5691 is therefore inhibition of PRND, a GAM5691 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5691 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5697 APPBP2 TATTGATCTGTCCCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GCCTGTG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM5697 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5697 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5697 is therefore inhibition of APPBP2, a GAM5697 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5697 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5703 ABCD1 GTCCAGTGCTCACTG ABCD1 (Accession NM_000033.2) is a GAM5703 target gene. ABCD1 A A
CCGACAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5703 is therefore inhibition of ABCD1. Accordingly, utilities of GAM5703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM5703 DHCR24 GTCCAGTGCTCACTG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

CCGACAT NM_014762.1) is another GAM5703 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5703 is therefore inhibition of DHCR24, a GAM5703 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5703 GLUL GTCCAGTGCTCACTG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

CCGACAT NM_002065.3) is another GAM5703 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5703 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5703 is therefore inhibition of GLUL, a GAM5703 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5703 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM5728 ADAMTS5 GGCATGTGTGAGCAG A Disintegrin- like and Metalloprotease (reprolysin type) with A A

CTGCAGG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM5728 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5728 is therefore inhibition of ADAMTS5, a GAM5728 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM5728 APLP2 GGCATGTGTGAGCAG A A CTGCAGG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is another GAM5728 target gene. APLP2 BINDING SITE1 and APLP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APLP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE1 and APLP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5728 is therefore inhibition of APLP2, a GAM5728 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM5728 APPBP2 GGCATGTGTGAGCAG A A CTGCAGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM5728 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5728 is therefore inhibition of APPBP2, a GAM5728 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5728 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5728 CNTF GGCATGTGTGAGCAG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

CTGCAGG another GAM5728 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5728 is therefore inhibition of CNTF, a GAM5728 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM5728 HD GGCATGTGTGAGCAG HD (Accession NM_002111.3) is another GAM5728 target gene. HD A A

CTGCAGG BINDING SITE1 through HD BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 through HD BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5728 is therefore inhibition of HD. Accordingly, utilities of GAM5728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5728 MAPK10 GGCATGTGTGAGCAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

CTGCAGG NM_138981.1) is another GAM5728 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5728 is therefore inhibition of

MAPK10, a GAM5728 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5728 TRPM2 GGCATGTGTGAGCAG TRPM2 (Accession NM_003307.1) is another GAM5728 target gene. A A

CTGCAGG TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5728 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5728 is therefore inhibition of TRPM2, a GAM5728 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5728 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM5744 ADAMTS5 TTCACATGTTGCTCA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GTTTTGC Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM5744 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5744 is therefore inhibition of ADAMTS5, a GAM5744 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM5744 APLP2 TTCACATGTTGCTCA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

GTTTTGC NM_001642.1) is another GAM5744 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5744 is therefore inhibition of APLP2, a GAM5744 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM5744 GFAP TTCACATGTTGCTCA GFAP (Accession NM_002055.2) is another GAM5744 target gene. A A

GTTTTGC GFAP BINDING SITE1 and GFAP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 and GFAP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5744 is therefore inhibition of GFAP. Accordingly, utilities of GAM5744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM5744 GYPA TTCACATGTTGCTCA Glycophorin A (includes MN blood group) (GYPA, Accession A A

GTTTTGC NM_002099.2) is another GAM5744 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5744 is therefore inhibition of GYPA, a GAM5744 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM5744 TRPM2 TTCACATGTTGCTCA TRPM2 (Accession NM_003307.1) is another GAM5744 target gene. A A

GTTTTGC TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites

found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5744 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5744 is therefore inhibition of TRPM2, a GAM5744 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5744 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM5749 A A DSCR1 CTGCACTAGAAGGCA CTATGTT Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM5749 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5749 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5749 is therefore inhibition of DSCR1, a GAM5749 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5749 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM5749 A A HTR2C CTGCACTAGAAGGCA CTATGTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM5749 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5749 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5749 is therefore inhibition of HTR2C, a GAM5749 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5749 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM5749 A A PLCD1 CTGCACTAGAAGGCA CTATGTT Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is another GAM5749 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5749 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5749 is therefore inhibition of PLCD1, a GAM5749 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM5749 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM5764 A A HD BINDING SITE TCTGCTGTGATGGAC ACTTGTA HD (Accession NM_002111.3) is a GAM5764 target gene. HD is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5764 is therefore inhibition of HD. Accordingly, utilities of GAM5764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM5764 A A HTR2C TCTGCTGTGATGGAC ACTTGTA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM5764 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5764 is therefore inhibition of HTR2C, a GAM5764 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM5764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM5764 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGTA NM_000618.2) is another GAM5764 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5764 is therefore inhibition of IGF1, a GAM5764 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5764 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM5764 target gene. A A

ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5764 is therefore inhibition of PSEN2. Accordingly, utilities of GAM5764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM5764 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM5764 target gene. A A

ACTTGTA TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5764 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5764 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM5764 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM5798 ARHA GAAAGTAGTAAGTTG Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A TATAGTT is a GAM5798 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5798 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5798 is therefore inhibition of ARHA, a GAM5798 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5798 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM5800 CAV2 AGTATTACAGCAGGT Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM5800 target A A ACTGGTT gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5800 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5800 is therefore inhibition of CAV2, a GAM5800 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5800 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5806 ABCD1 GCCTGGATGTGACCA ABCD1 (Accession NM_000033.2) is a GAM5806 target gene. ABCD1 A A CCCTCAC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5806 RNA

are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5806 is therefore inhibition of ABCD1. Accordingly, utilities of GAM5806 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM5806 DHCR24 GCCTGGATGTGACCA CCCTCAC A A

24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM5806 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5806 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5806 is therefore inhibition of DHCR24, a GAM5806 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5806 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5809 CAV1 GACAAGAGGCACAGA CAGCAGG A A

Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM5809 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5809 is therefore inhibition of CAV1, a GAM5809 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM5809 CRAT GACAAGAGGCACAGA CAGCAGG A A

Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is another GAM5809 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of CRAT, a GAM5809 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5809 HTR2C GACAAGAGGCACAGA A A CAGCAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM5809 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of HTR2C, a GAM5809 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM5809 MAPT GACAAGAGGCACAGA A A CAGCAGG Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM5809 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of MAPT, a GAM5809 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM144.

GAM5809 PLCD1 GACAAGAGGCACAGA Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is
A A
CAGCAGG another GAM5809 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of PLCD1, a GAM5809 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM5809 PSEN1 GACAAGAGGCACAGA PSEN1 (Accession NM_007318.1) is another GAM5809 target gene.
A A
CAGCAGG PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PSEN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of PSEN1. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM5809 THOP1 GACAAGAGGCACAGA Thimet Oligopeptidase 1 (THOP1, Accession NM_003249.2) is
A A
CAGCAGG another GAM5809 target gene. THOP1 BINDING SITE1 and THOP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by THOP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of THOP1 BINDING SITE1 and THOP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of THOP1, a GAM5809 target gene which involves in the metabolism of neuropeptide and in cytoplasmic peptide degradation. and therefore

is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with THOP1.The function of THOP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM520.

GAM5809 TNF GACAAGAGGCACAGA Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A
CAGCAGG Accession NM_000594.2) is another GAM5809 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5809 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5809 is therefore inhibition of TNF, a GAM5809 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM5809 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM5814 ADAM17 TGCAAGTCTGTGATT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TTGTGTT factor, (ADAM17, Accession NM_003183.3) is a GAM5814 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5814 is therefore inhibition of ADAM17, a GAM5814 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM5814 FHL2 TGCAAGTCTGTGATT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TTGTGTT another GAM5814 target gene. FHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5814 is therefore inhibition of FHL2, a GAM5814 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5814 FPRL1 TGCAAGTCTGTGATT A A TTGTGTT FPRL1 (Accession NM_001462.1) is another GAM5814 target gene. FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5814 is therefore inhibition of FPRL1. Accordingly, utilities of GAM5814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM5814 HTR2C TGCAAGTCTGTGATT A A TTGTGTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM5814 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5814 is therefore inhibition of HTR2C, a GAM5814 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM5814 IGF1 TGCAAGTCTGTGATT A A TTGTGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5814 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5814 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5814 is therefore inhibition of IGF1, a GAM5814 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5814 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5823 IGF1 GGAAAGTTAAAGATG TATGTAT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM5823 target gene. IGF1 BINDING SITE1 through IGF1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 through IGF1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5823 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5823 is therefore inhibition of IGF1, a GAM5823 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5823 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5823 MAPK10 GGAAAGTTAAAGATG TATGTAT Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138981.1) is another GAM5823 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5823 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5823 is therefore inhibition of MAPK10, a GAM5823 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM5823 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5826 ABCD1 TGAGGTCATGTTCTG ABCD1 (Accession NM_000033.2) is a GAM5826 target gene. ABCD1 A A
TCAGGTT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5826 is therefore inhibition of ABCD1. Accordingly, utilities of GAM5826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM5826 IGF1 TGAGGTCATGTTCTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCAGGTT NM_000618.2) is another GAM5826 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5826 is therefore inhibition of IGF1, a GAM5826 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5826 IL1B TGAGGTCATGTTCTG Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A
TCAGGTT GAM5826 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5826 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5826 is therefore inhibition of IL1B, a GAM5826 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5826 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM5826 MME TGAGGTCATGTTCTG TCAGGTT Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM5826 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5826 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5826 is therefore inhibition of MME, a GAM5826 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5826 TRPM2 TGAGGTCATGTTCTG TCAGGTT TRPM2 (Accession NM_003307.1) is another GAM5826 target gene. TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5826 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5826 is therefore inhibition of TRPM2, a GAM5826 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5826 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM5836 ACE CACCCAGGCTGGAGT GCAGTGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM5836 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence A A

of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5836 is therefore inhibition of ACE, a GAM5836 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5836 ADAM17 CACCCAGGCTGGAGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
GCAGTGG factor, (ADAM17, Accession NM_021832.1) is another GAM5836 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of ADAM17, a GAM5836 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM5836 FLNB CACCCAGGCTGGAGT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
GCAGTGG NM_001457.1) is another GAM5836 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of FLNB, a GAM5836 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM5836 FPRL1 CACCCAGGCTGGAGT FPRL1 (Accession NM_001462.1) is another GAM5836 target gene. A A

GCAGTGG FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of FPRL1. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM5836 IAPP CACCCAGGCTGGAGT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

GCAGTGG another GAM5836 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of IAPP, a GAM5836 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5836 TGFB1 CACCCAGGCTGGAGT TGFB1 (Accession NM_000660.1) is another GAM5836 target gene. A A

GCAGTGG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of TGFB1. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM5836 ACE TCACTGCAACCTCCG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 B A

CCTGCCG (ACE, Accession NM_152831.1) is another GAM5836 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated

region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of ACE, a GAM5836 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5836 AGER TCACTGCAACCTCCG Advanced Glycosylation End Product- specific Receptor (AGER, B A CCTGCCG Accession NM_172197.1) is another GAM5836 target gene. AGER BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AGER, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AGER BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of AGER, a GAM5836 target gene which Receptor for advanced glycosylation end products (receptor for AGE). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AGER.The function of AGER and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2350.

GAM5836 IAPP TCACTGCAACCTCCG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is B A CCTGCCG another GAM5836 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5836 is therefore inhibition of IAPP, a GAM5836 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM5836 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM5859 ACHE TCCCTGAGCCCTGAA Acetylcholinesterase (YT blood group) (ACHE, Accession A A

GGGTGTT NM_015831.1) is a GAM5859 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5859 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5859 is therefore inhibition of ACHE, a GAM5859 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5859 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM5859 MTNR1A TCCCTGAGCCCTGAA Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

GGGTGTT another GAM5859 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5859 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5859 is therefore inhibition of MTNR1A, a GAM5859 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5859 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM5868 ARHA TCAAAGCTGCAGATT Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

GCCTGTG is a GAM5868 target gene. ARHA BINDING SITE1 and ARHA BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ARHA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE1 and ARHA BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM5868 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5868 is therefore inhibition of ARHA, a GAM5868 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM5868 DLST TCAAAGCTGCAGATT GCCTGTG Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is another GAM5868 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5868 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5868 is therefore inhibition of DLST, a GAM5868 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM5868 TNF TCAAAGCTGCAGATT GCCTGTG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM5868 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5868 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5868 is therefore inhibition of TNF, a GAM5868 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM5868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM5868 VLDLR TCAAAGCTGCAGATT Very Low Density Lipoprotein Receptor (VLDLR, Accession A A
GCCTGTG NM_003383.1) is another GAM5868 target gene. VLDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VLDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of VLDLR BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5868 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5868 is therefore inhibition of VLDLR, a GAM5868 target gene which may play a crucial role in triglyceride metabolism and therefore is associated with Alzheimer. Accordingly, utilities of GAM5868 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with VLDLR.The function of VLDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM5872 ACE GTTGTGTGGAAGATG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
CTTTGCC (ACE, Accession NM_152831.1) is a GAM5872 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5872 is therefore inhibition of ACE, a GAM5872 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM5872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5872 APBA1 GTTGTGTGGAAGATG Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
CTTTGCC 1 (X11) (APBA1, Accession NM_001163.2) is another GAM5872 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5872 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5872 is therefore inhibition of

APBA1, a GAM5872 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5872 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5874 BACE TCCAAAATTAAAGGT A A TGTAGAA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) is a GAM5874 target gene. BACE BINDING SITE1 through BACE BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 through BACE BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM5874 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5874 is therefore inhibition of BACE, a GAM5874 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5874 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM5874 IGF1 TCCAAAATTAAAGGT A A TGTAGAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5874 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5874 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5874 is therefore inhibition of IGF1, a GAM5874 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5874 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5874 MME TCCAAAATTAAAGGT A A TGTAGAA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM5874 target gene. MME BINDING SITE is a target binding site found in the

3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5874 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5874 is therefore inhibition of MME, a GAM5874 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5874 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5884 DLST TAGCTCATTTTTGAA ATCAGTT — Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is a GAM5884 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5884 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5884 is therefore inhibition of DLST, a GAM5884 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5884 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM5884 IGF1 TAGCTCATTTTTGAA ATCAGTT — Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM5884 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5884 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5884 is therefore inhibition of IGF1, a GAM5884 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5884 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases

and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5884 NOTCH1 TAGCTCATTTTTGAA ATCAGTT Notch (Drosophila) Homolog 1 (translocation- associated) (NOTCH1, Accession NM_017617.2) is another GAM5884 target gene. NOTCH1 BINDING SITE1 and NOTCH1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NOTCH1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE1 and NOTCH1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5884 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5884 is therefore inhibition of NOTCH1, a GAM5884 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5884 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM5886 BACE2 TATCTCTTGCCTTGA CCTCCTA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is a GAM5886 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5886 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5886 is therefore inhibition of BACE2, a GAM5886 target gene which cleaves intracellularly the b- secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM5886 PSEN1 TATCTCTTGCCTTGA CCTCCTA PSEN1 (Accession NM_000021.2) is another GAM5886 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5886 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5886 is therefore inhibition of PSEN1. Accordingly, utilities of GAM5886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM5910 ACT AGCAAGTGTTGAAAC Activator of CAMP- responsive Element Modulator (CR (ACT, A A AGCTGGT Accession NM_020482.3) is a GAM5910 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5910 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5910 is therefore inhibition of ACT, a GAM5910 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5910 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM5910 DSCR1 AGCAAGTGTTGAAAC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A AGCTGGT NM_004414.3) is another GAM5910 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5910 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5910 is therefore inhibition of DSCR1, a GAM5910 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5910 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM5916 BACE AAGCAGCCTTGGACC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A AGGAGGG is a GAM5916 target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 and BACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5916 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM5916 is therefore inhibition of BACE, a GAM5916 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM5916 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM5916 IL1A AAGCAGCCTTGGACC AGGAGGG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM5916 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5916 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5916 is therefore inhibition of IL1A, a GAM5916 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5916 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5958 CASP3 AAGCTGGCCTGTACC TGCTGAG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is a GAM5958 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5958 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM5958 is therefore inhibition of CASP3, a GAM5958 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5958 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM5958 CTSG AAGCTGGCCTGTACC Cathepsin G (CTSG, Accession NM_001911.2) is another GAM5958 A A

TGCTGAG target gene. CTSG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5958 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5958 is therefore inhibition of CTSG, a GAM5958 target gene which is a member of the peptidase S1 protein family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5958 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSG.The function of CTSG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2514.

GAM5963 ARHA GAGGACCCTTAGGTC Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

AGACAGA is a GAM5963 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5963 is therefore inhibition of ARHA, a GAM5963 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM5963 NGB GAGGACCCTTAGGTC Neuroglobin (NGB, Accession NM_021257.2) is another GAM5963 A A

AGACAGA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5963 is therefore inhibition of NGB, a GAM5963 target gene which has function in oxygen transport

and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM5971 APPBP2 TTTTTGTGGAATATT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A TTTTTAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM5971 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5971 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5971 is therefore inhibition of APPBP2, a GAM5971 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5971 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5971 MTNR1A TTTTTGTGGAATATT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A TTTTTAA another GAM5971 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5971 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5971 is therefore inhibition of MTNR1A, a GAM5971 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5971 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM5973 IGF1 TGGCAGATTTGGTTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A CTGTTGG NM_000618.2) is a GAM5973 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5973 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5973 is therefore inhibition of IGF1, a GAM5973 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM5973 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5973 MAPK10 TGGCAGATTTGGTTG CTGTTGG Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_002753.2) is another GAM5973 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5973 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5973 is therefore inhibition of MAPK10, a GAM5973 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5973 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM5973 MAPT TGGCAGATTTGGTTG CTGTTGG Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM5973 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5973 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM5973 is therefore inhibition of MAPT, a GAM5973 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5973 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM5973 A PRNP TGGCAGATTTGGTTG CTGTTGG A Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM5973 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5973 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5973 is therefore inhibition of PRNP, a GAM5973 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5973 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM5973 A TRPM2 TGGCAGATTTGGTTG CTGTTGG A TRPM2 (Accession NM_003307.1) is another GAM5973 target gene. TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5973 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5973 is therefore inhibition of TRPM2, a GAM5973 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5973 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM5990 A DSCR1 TCCTTTGGACATGGG CAAGGGT A Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM5990 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM5990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5990 is therefore inhibition of DSCR1, a GAM5990 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM5990	MAPT	TGCTCTTGCTCTTTC TTCTGGA	Microtubule- associated Protein Tau (MAPT, Accession NM_016834.1) is another GAM5990 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.	B	A

Another function of GAM5990 is therefore inhibition of MAPT, a GAM5990 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM5990	MME	TGCTCTTGCTCTTTC TTCTGGA	Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007288.1) is another GAM5990 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.	B	A

Another function of GAM5990 is therefore inhibition of MME, a GAM5990 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM5990	PRND	TGCTCTTGCTCTTTC	Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is	B	A

TTCTGGA another GAM5990 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5990 is therefore inhibition of PRND, a GAM5990 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5998 CRAT CTTGGCCCTGTGAGG Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is a A A

CTTCACC GAM5998 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5998 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM5998 is therefore inhibition of CRAT, a GAM5998 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5998 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5998 DHCR24 CTTGGCCCTGTGAGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

CTTCACC NM_014762.1) is another GAM5998 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM5998 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5998 is therefore inhibition of DHCR24, a GAM5998 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5998 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM5998 MPO CTTGGCCCTGTGAGG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM5998 A A
CTTCACC target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5998 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5998 is therefore inhibition of MPO, a GAM5998 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5998 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM5998 SNCB CTTGGCCCTGTGAGG Synuclein, Beta (SNCB, Accession NM_003085.2) is another A A
CTTCACC GAM5998 target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5998 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM5998 is therefore inhibition of SNCB, a GAM5998 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM5998 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM5998 TRPM2 CTTGGCCCTGTGAGG TRPM2 (Accession NM_003307.1) is another GAM5998 target gene. A A
CTTCACC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM5998 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM5998 is therefore inhibition of TRPM2, a GAM5998 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM5998 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM6014 IL1A TACAAGTGCTCCAGT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is a GAM6014 A A

ACGGCC target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6014 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6014 is therefore inhibition of IL1A, a GAM6014 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6014 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM6024 BACE TGGAGAATTAAAAAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

GGTAGTG is a GAM6024 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6024 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6024 is therefore inhibition of BACE, a GAM6024 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6024 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6024 MPO TGGAGAATTAAAAAG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM6024 A A

GGTAGTG target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6024 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6024 is therefore inhibition of MPO, a GAM6024 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6024 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM6051 ADAM10 CTCCCTCCACTTCTG A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A

AGGACGT Accession NM_001110.1) is a GAM6051 target gene. ADAM10 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6051 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6051 is therefore inhibition of ADAM10, a GAM6051 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6051 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM6055 DHCR24 TTCACCCATCTTTCC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

ACCCAC NM_014762.1) is a GAM6055 target gene. DHCR24 BINDING SITE1 through DHCR24 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 through DHCR24 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM6055 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6055 is therefore inhibition of DHCR24, a GAM6055 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM6055 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6055 PRND TTCACCCATCTTTCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

ACCCAC another GAM6055 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6055 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6055 is therefore inhibition of PRND, a GAM6055 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6055 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6055 PSEN1 TTCACCCATCTTTCC PSEN1 (Accession NM_007318.1) is another GAM6055 target gene. A A

ACCCAC PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6055 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6055 is therefore inhibition of PSEN1. Accordingly, utilities of GAM6055 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM6055 UBB TTCACCCATCTTTCC Ubiquitin B (UBB, Accession NM_018955.2) is another GAM6055 A A

ACCCAC target gene. UBB BINDING SITE1 and UBB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by UBB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE1 and UBB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6055 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6055 is therefore inhibition of UBB, a GAM6055 target gene which marks cellular proteins for

degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM6055 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM6083 ABCD1 GGCCTGAGGTCAGCA ABCD1 (Accession NM_000033.2) is a GAM6083 target gene.
ABCD1 A A
GTAGAGG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6083 is therefore inhibition of ABCD1. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM6083 APBB1 GGCCTGAGGTCAGCA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A
A
GTAGAGG 1 (Fe65) (APBB1, Accession NM_145689.1) is another GAM6083 target gene. APBB1 BINDING SITE1 and APBB1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APBB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE1 and APBB1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6083 is therefore inhibition of APBB1, a GAM6083 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM6083 APLP2 GGCCTGAGGTCAGCA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A
A
GTAGAGG NM_001642.1) is another GAM6083 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6083 is therefore inhibition of APLP2, a GAM6083 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM6083 BAX GGCCTGAGGTCAGCA AA GTAGAGG BCL2- associated X Protein (BAX, Accession NM_004324.2) is another GAM6083 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6083 is therefore inhibition of BAX, a GAM6083 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM6083 PRND GGCCTGAGGTCAGCA AA GTAGAGG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM6083 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6083 is therefore inhibition of PRND, a GAM6083 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6083 SLC17A7 GGCCTGAGGTCAGCA AA GTAGAGG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession NM_020309.1) is another GAM6083 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6083 is therefore inhibition of SLC17A7, a GAM6083 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM6083 TRPM2 GGCCTGAGGTCAGCA TRPM2 (Accession NM_003307.1) is another GAM6083 target gene. A A

GTAGAGG TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6083 is therefore inhibition of TRPM2, a GAM6083 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM6083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM6102 ABCD1 CTGAGGTCAGGAGTT ABCD1 (Accession NM_000033.2) is a GAM6102 target gene. ABCD1 A A

CGAGACC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6102 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6102 is therefore inhibition of ABCD1. Accordingly, utilities of GAM6102 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM6102 IGF1 CTGAGGTCAGGAGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CGAGACC NM_000618.2) is another GAM6102 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6102 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6102 is therefore inhibition of IGF1, a GAM6102 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6102 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6102 PRND CTGAGGTCAGGAGTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
CGAGACC another GAM6102 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6102 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6102 is therefore inhibition of PRND, a GAM6102 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6102 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6102 TRPM2 CTGAGGTCAGGAGTT TRPM2 (Accession NM_003307.1) is another GAM6102 target gene. A A
CGAGACC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6102 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6102 is therefore inhibition of TRPM2, a GAM6102 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM6102 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM6121 APLP2 GAGGTAGAGGTTGCA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A
GTGAGTC NM_001642.1) is a GAM6121 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6121 is therefore inhibition of APLP2, a GAM6121 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM6121 APPBP2 GAGGTAGAGGTTGCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GTGAGTC Protein 2 (APPBP2, Accession NM_006380.2) is another GAM6121 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of APPBP2, a GAM6121 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6121 BACE GAGGTAGAGGTTGCA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A
GTGAGTC is another GAM6121 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of BACE, a GAM6121 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6121 CNTF GAGGTAGAGGTTGCA GTGAGTC AA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM6121 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of CNTF, a GAM6121 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM6121 DLST GAGGTAGAGGTTGCA GTGAGTC AA Dihydrolipoamide S- succinyltransferase (E2 component of 2-oxo- glutarat (DLST, Accession NM_001933.2) is another GAM6121 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of DLST, a GAM6121 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM6121 FHL2 GAGGTAGAGGTTGCA AA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is

GTGAGTC another GAM6121 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of FHL2, a GAM6121 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM6121 GYPA GAGGTAGAGGTTGCA Glycophorin A (includes MN blood group) (GYPA, Accession A A

GTGAGTC NM_002099.2) is another GAM6121 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of GYPA, a GAM6121 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6121 HTR2C GAGGTAGAGGTTGCA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

GTGAGTC NM_000868.1) is another GAM6121 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of HTR2C, a GAM6121 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM6121 IGF1 GAGGTAGAGGTTGCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GTGAGTC NM_000618.2) is another GAM6121 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of IGF1, a GAM6121 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6121 MAPK10 GAGGTAGAGGTTGCA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A
GTGAGTC NM_002753.2) is another GAM6121 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of MAPK10, a GAM6121 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM6121 MAPT GAGGTAGAGGTTGCA Microtubule- associated Protein Tau (MAPT, Accession A A
GTGAGTC NM_173727.1) is another GAM6121 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE

III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of MAPT, a GAM6121 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM6121 PRND GAGGTAGAGGTTGCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GTGAGTC another GAM6121 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of PRND, a GAM6121 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6121 TNF GAGGTAGAGGTTGCA Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

GTGAGTC Accession NM_000594.2) is another GAM6121 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of TNF, a GAM6121 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM99.

GAM6121 TNFRSF6 GAGGTAGAGGTTGCA TNFRSF6 (Accession NM_000043.3) is another GAM6121 target gene. A A

GTGAGTC TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6121 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM6121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM6161 ADAM17 TTTGCACACTTTCCA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

AGTTGCC factor, (ADAM17, Accession NM_003183.3) is a GAM6161 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6161 is therefore inhibition of ADAM17, a GAM6161 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6161 B2M TTTGCACACTTTCCA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another A A

AGTTGCC GAM6161 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6161 is therefore inhibition of B2M, a GAM6161 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6161 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM6161 CTNND2 TTTGCACACTTTCCA AGTTGCC Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM6161 target gene. CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CTNND2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6161 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6161 is therefore inhibition of CTNND2, a GAM6161 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM6161 IGF1 TTTGCACACTTTCCA AGTTGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM6161 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6161 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6161 is therefore inhibition of IGF1, a GAM6161 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6161 PRNP TTTGCACACTTTCCA AGTTGCC Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM6161 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide A A

sequence of GAM6161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6161 is therefore inhibition of PRNP, a GAM6161 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM6172 ACE AGTGGTTTCAGGGAC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A TTCTGTA (ACE, Accession NM_152831.1) is a GAM6172 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6172 is therefore inhibition of ACE, a GAM6172 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM6172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6172 CRH AGTGGTTTCAGGGAC Corticotropin Releasing Hormone (CRH, Accession NM_000756.1) is A A TTCTGTA another GAM6172 target gene. CRH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6172 is therefore inhibition of CRH, a GAM6172 target gene which regulates the release of corticotropin from pituitary gland. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRH.The function of CRH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM1976.

GAM6172 IGF1 AGTGGTTTCAGGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TTCTGTA NM_000618.2) is another GAM6172 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6172 is therefore inhibition of IGF1, a GAM6172 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6172 SNCA AGTGGTTTCAGGGAC SNCA (Accession NM_000345.2) is another GAM6172 target gene. A A

TTCTGTA SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6172 is therefore inhibition of SNCA. Accordingly, utilities of GAM6172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM6234 APLP2 AACCTGCTGGTAAAG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

CACTGGC NM_001642.1) is a GAM6234 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6234 is therefore inhibition of APLP2, a GAM6234 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM6234 BACE AACCTGCTGGTAAAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A
CACTGGC is another GAM6234 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6234 is therefore inhibition of BACE, a GAM6234 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6234 SLC6A4 AACCTGCTGGTAAAG Solute Carrier Family 6 (neurotransmitter transporter, A A
CACTGGC serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM6234 target gene. SLC6A4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6234 is therefore inhibition of SLC6A4, a GAM6234 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM6250 CTSB TGTAAACTTGTCTTG CTSB (Accession NM_147783.1) is a GAM6250 target gene. CTSB A A
AATGGAA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6250 RNA are set forth in Tables 6 and 7,

hereby incorporated herein.

A function of GAM6250 is therefore inhibition of CTSB. Accordingly, utilities of GAM6250 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM6265 ADAMTS5 TGGGTTAGTGGTTGA ATAGTTT A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM6265 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6265 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6265 is therefore inhibition of ADAMTS5, a GAM6265 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6265 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM6265 TNF TGGGTTAGTGGTTGA ATAGTTT Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM6265 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6265 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6265 is therefore inhibition of TNF, a GAM6265 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM6265 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6271 BCHE AGCAAGATGGTAGCA TTGGAGA BCHE (Accession NM_000055.1) is a GAM6271 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of A A

Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6271 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6271 is therefore inhibition of BCHE. Accordingly, utilities of GAM6271 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM6271 HD AGCAAGATGGTAGCA HD (Accession NM_002111.3) is another GAM6271 target gene. HD A A

TTGGAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6271 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6271 is therefore inhibition of HD. Accordingly, utilities of GAM6271 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6271 MME AGCAAGATGGTAGCA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TTGGAGA enkephalinase, (MME, Accession NM_000902.2) is another GAM6271 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6271 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6271 is therefore inhibition of MME, a GAM6271 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6271 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6271 PRNP AGCAAGATGGTAGCA Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A

TTGGAGA Strausler- (PRNP, Accession NM_000311.1) is another GAM6271 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6271 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6271 is therefore inhibition of PRNP, a GAM6271 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6271 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM6296 APOC1 TCCCTTCAGAGCCCA Apolipoprotein C- I (APOC1, Accession NM_001645.2) is a GAM6296 A A
TGGGTTT target gene. APOC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APOC1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6296 is therefore inhibition of APOC1, a GAM6296 target gene which appears to modulate the interaction of apoe with beta- migrating vldl and inhibit binding of beta- vldl to the ldl receptor- related protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APOC1.The function of APOC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM6296 PLAU TCCCTTCAGAGCCCA Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A
TGGGTTT is another GAM6296 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6296 is therefore inhibition of PLAU, a GAM6296 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM6296 PRND TCCCTTCAGAGCCCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGTTT another GAM6296 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6296 is therefore inhibition of PRND, a GAM6296 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6296 ABCD1 AAATCCTGGGGATCT ABCD1 (Accession NM_000033.2) is another GAM6296 target gene. B A

GGAGGGA ABCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6296 is therefore inhibition of ABCD1. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM6296 FHL2 AAATCCTGGGGATCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is B A

GGAGGGA another GAM6296 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6296 is therefore inhibition of FHL2, a GAM6296 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM6296 HD AAATCCTGGGGATCT HD (Accession NM_002111.3) is another GAM6296 target gene. HD B A

GGAGGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6296 is therefore inhibition of HD. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6296 MME AAATCCTGGGGATCT Membrane Metallo- endopeptidase (neutral endopeptidase, B A

GGAGGGA enkephalinase, (MME, Accession NM_000902.2) is another GAM6296 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6296 is therefore inhibition of MME, a GAM6296 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6306 ADAMTS5 GCTGTGTTAACTGTT A Disintegrin- like and Metalloprotease (reprolysin type) with A A

CAAACTC Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM6306 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6306 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6306 is therefore inhibition of ADAMTS5, a GAM6306 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6306 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM6306 APPBP2 GCTGTGTTAACTGTT CAAACTC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM6306 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6306 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6306 is therefore inhibition of APPBP2, a GAM6306 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6306 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6306 DHCR24 GCTGTGTTAACTGTT CAAACTC 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM6306 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6306 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6306 is therefore inhibition of DHCR24, a GAM6306 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6306 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6306 PRNP GCTGTGTTAACTGTT CAAACTC Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM6306 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6306 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6306 is therefore inhibition of PRNP, a GAM6306 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6306 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM6329 HD AAAGACAGTTCAGTG HD (Accession NM_002111.3) is a GAM6329 target gene. HD BINDING A A

ACAAGTT SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6329 is therefore inhibition of HD. Accordingly, utilities of GAM6329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6361 BACE GCAGCAGGCAGGGCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

AGGCAGG is a GAM6361 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6361 is therefore inhibition of BACE, a GAM6361 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6361 BACE2 GCAGCAGGCAGGGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

AGGCAGG NM_138992.1) is another GAM6361 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and

secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of BACE2, a GAM6361 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM6361 GFAP GCAGCAGGCAGGGCC GFAP (Accession NM_002055.2) is another GAM6361 target gene. A A

AGGCAGG GFAP BINDING SITE1 and GFAP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 and GFAP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of GFAP. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM6361 HTR2C GCAGCAGGCAGGGCC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

AGGCAGG NM_000868.1) is another GAM6361 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of HTR2C, a GAM6361 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM6361 LRP1 GCAGCAGGCAGGGCC Low Density Lipoprotein- related Protein 1 (alpha- 2- A A

AGGCAGG macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM6361 target gene. LRP1 BINDING SITE1 and LRP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LRP1,

corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE1 and LRP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of LRP1, a GAM6361 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM6361 MAPT GCAGCAGGCAGGGCC AGGCAGG Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM6361 target gene. MAPT BINDING SITE1 and MAPT BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 and MAPT BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6361 is therefore inhibition of MAPT, a GAM6361 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM6361 NGB GCAGCAGGCAGGGCC AGGCAGG Neuroglobin (NGB, Accession NM_021257.2) is another GAM6361 target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6361 is therefore inhibition of NGB, a GAM6361 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM6361 SERPINA GCAGCAGGCAGGGCC Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha- 1 A A

3 AGGCAGG antiprotei (SERPINA3, Accession NM_001085.2) is another GAM6361 target gene. SERPINA3 BINDING SITE1 and SERPINA3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERPINA3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SERPINA3 BINDING SITE1 and SERPINA3 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of SERPINA3, a GAM6361 target gene which is a member of the serpin family of serine protease inhibitors. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SERPINA3.The function of SERPINA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM6361 SNCG GCAGCAGGCAGGGCC SYNUCLEIN, GAMMA (SNCG, Accession NM_003087.1) is another A A

AGGCAGG GAM6361 target gene. SNCG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SNCG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of SNCG, a GAM6361 target gene which plays a role in neurofilament network integrity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCG.The function of SNCG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM6361 TGFB1 GCAGCAGGCAGGGCC TGFB1 (Accession NM_000660.1) is another GAM6361 target gene. A A

AGGCAGG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of TGFB1. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM6361 TRPM2 GCAGCAGGCAGGGCC TRPM2 (Accession NM_003307.1) is another GAM6361 target gene. A A
AGGCAGG TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6361 is therefore inhibition of TRPM2, a GAM6361 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM6361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM6366 CAV1 TGAGGTTAGTAGTTT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
GAGACCA NM_001753.3) is a GAM6366 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6366 is therefore inhibition of CAV1, a GAM6366 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM6366 DSCR1 TGAGGTTAGTAGTTT Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A
GAGACCA NM_004414.3) is another GAM6366 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6366 is therefore inhibition of DSCR1, a GAM6366 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM6366 IGF1 TGAGGTTAGTAGTTT GAGACCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM6366 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6366 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6366 is therefore inhibition of IGF1, a GAM6366 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6388 ABCD1 AGGCAGTGTTGTTCC TGATTGC ABCD1 (Accession NM_000033.2) is a GAM6388 target gene. ABCD1 BINDING SITE1 and ABCD1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ABCD1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE1 and ABCD1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6388 RNA are set forth in Tables 6 and 7, hereby incorporated herein. ABCD1 A A A A

A function of GAM6388 is therefore inhibition of ABCD1. Accordingly, utilities of GAM6388 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM6388 ACE AGGCAGTGTTGTTCC TGATTGC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is another GAM6388 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated A A

region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6388 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6388 is therefore inhibition of ACE, a GAM6388 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM6388 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6388 MPO AGGCAGTGTTGTTCC Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM6388 A A TGATTGC target gene. MPO BINDING SITE1 and MPO BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MPO, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE1 and MPO BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6388 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6388 is therefore inhibition of MPO, a GAM6388 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6388 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM6414 HTR2C TCTAACACTGACTTC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A TATTCCA NM_000868.1) is a GAM6414 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6414 is therefore inhibition of HTR2C, a GAM6414 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM6417 BACE TGGAGAATTAAAAAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

GGTAGTG is a GAM6417 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6417 is therefore inhibition of BACE, a GAM6417 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6417 MPO TGGAGAATTAAAAAG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM6417 A A

GGTAGTG target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6417 is therefore inhibition of MPO, a GAM6417 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM6431 DLST TGAAAAGCCTTTGGG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TAGTGAT oxo- glutarat (DLST, Accession NM_001933.2) is a GAM6431 target gene. DLST BINDING SITE1 and DLST BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DLST, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE1 and DLST BINDING SITE2, and secondary

structure complementarity to the nucleotide sequence of GAM6431 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6431 is therefore inhibition of DLST, a GAM6431 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6431 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM6440 ADAMTS5 TGTGAGAGAAATGGC A Disintegrin- like and Metalloprotease (reprolysin type) with A A AAGTTGG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM6440 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6440 is therefore inhibition of ADAMTS5, a GAM6440 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM6440 CASP3 TGTGAGAGAAATGGC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A AAGTTGG Accession NM_032991.1) is another GAM6440 target gene. CASP3 BINDING SITE1 and CASP3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE1 and CASP3 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6440 is therefore inhibition of CASP3, a GAM6440 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM6440 MAPT TGTGAGAGAAATGGC AAGTTGG Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM6440 target gene. MAPT BINDING SITE1 through MAPT BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 through MAPT BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM6440 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6440 is therefore inhibition of MAPT, a GAM6440 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM6440 MME TGTGAGAGAAATGGC AAGTTGG Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is another GAM6440 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6440 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6440 is therefore inhibition of MME, a GAM6440 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6459 DSCR1 TCCTTTGGACATGGG CAAGGGT Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM6459 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6459 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6459 is therefore inhibition of DSCR1, a GAM6459 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM6459 MAPT TGCTCTTGCTCTTTC TTCTGGA Microtubule- associated Protein Tau (MAPT, Accession NM_016834.1) is another GAM6459 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6459 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM6459 is therefore inhibition of MAPT, a GAM6459 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM6459 MME TGCTCTTGCTCTTTC TTCTGGA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007288.1) is another GAM6459 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6459 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM6459 is therefore inhibition of MME, a GAM6459 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6459 PRND TGCTCTTGCTCTTTC TTCTGGA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM6459 target gene. PRND BINDING SITE is a target binding B A

site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6459 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6459 is therefore inhibition of PRND, a GAM6459 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6466 APLP2 TGGAATGGCTGAAGA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A CTGTGAA NM_001642.1) is a GAM6466 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6466 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6466 is therefore inhibition of APLP2, a GAM6466 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6466 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM6466 FLNB TGGAATGGCTGAAGA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A CTGTGAA NM_001457.1) is another GAM6466 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6466 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6466 is therefore inhibition of FLNB, a GAM6466 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6466 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM1193.

GAM6466 SLC17A7 TGGAATGGCTGAAGA SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A CTGTGAA NM_020309.1) is another GAM6466 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6466 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6466 is therefore inhibition of SLC17A7, a GAM6466 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM6466 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM6467 BACE GGTAGCTAGAGGGGA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A GATAGCA is a GAM6467 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6467 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6467 is therefore inhibition of BACE, a GAM6467 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6467 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6467 BACE2 GGTAGCTAGAGGGGA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A GATAGCA NM_138992.1) is another GAM6467 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6467 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6467 is therefore inhibition of BACE2, a GAM6467 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6467 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM6506 ABCD1 GCCCAGGAGTCTGAG ABCD1 (Accession NM_000033.2) is a GAM6506 target gene. ABCD1 A A

GCTGGAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6506 is therefore inhibition of ABCD1. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM6506 ADAM17 GCCCAGGAGTCTGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

GCTGGAG factor, (ADAM17, Accession NM_021832.1) is another GAM6506 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6506 is therefore inhibition of ADAM17, a GAM6506 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6506 DHCR24 GCCCAGGAGTCTGAG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GCTGGAG NM_014762.1) is another GAM6506 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6506 is therefore inhibition of DHCR24, a GAM6506 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6506 GFAP GCCCAGGAGTCTGAG GFAP (Accession NM_002055.2) is another GAM6506 target gene. A A

GCTGGAG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6506 is therefore inhibition of GFAP. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM6506 IGF1 GCCCAGGAGTCTGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GCTGGAG NM_000618.2) is another GAM6506 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6506 is therefore inhibition of IGF1, a GAM6506 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6506 LRP1 GCCCAGGAGTCTGAG Low Density Lipoprotein- related Protein 1 (alpha- 2- A A

GCTGGAG macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM6506 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6506 is therefore inhibition of LRP1, a GAM6506 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM6506	UBB	CAGCTATTCAGGAGC TTGAGGT	Ubiquitin B (UBB, Accession NM_018955.2) is another GAM6506 target gene. UBB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.	B	A

Another function of GAM6506 is therefore inhibition of UBB, a GAM6506 target gene which marks cellular proteins for degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM6506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM6509	ACHE	TCTTCCCCACCTTCG GCTTGCA	Acetylcholinesterase (YT blood group) (ACHE, Accession NM_015831.1) is a GAM6509 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.	A	A

A function of GAM6509 is therefore inhibition of ACHE, a GAM6509 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM6509 APP TCTTCCCCACCTTCG APP (Accession NM_000484.1) is another GAM6509 target gene. APP A A
GCTTGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of APP. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM6509 B2M TCTTCCCCACCTTCG Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another A A
GCTTGCA GAM6509 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of B2M, a GAM6509 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM6509 BACE2 TCTTCCCCACCTTCG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GCTTGCA NM_138991.1) is another GAM6509 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of BACE2, a GAM6509 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM189.

GAM6509 NGB TCTTCCCCACCTTCG Neuroglobin (NGB, Accession NM_021257.2) is another GAM6509
A A
GCTTGCA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of NGB, a GAM6509 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM6509 TGFB1 TCTTCCCCACCTTCG TGFB1 (Accession NM_000660.1) is another GAM6509 target gene.
A A
GCTTGCA TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of TGFB1. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM6509 APBA1 GGCCTCAGAAGCTGA Amyloid Beta (A4) Precursor Protein- binding, Family A, Member B
A
GGGGAGA 1 (X11) (APBA1, Accession NM_001163.2) is another GAM6509 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of APBA1, a GAM6509 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM6509 GFAP GGCCTCAGAAGCTGA GFAP (Accession NM_002055.2) is another GAM6509 target gene. B A

GGGGAGA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of GFAP. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM6509 SNCB GGCCTCAGAAGCTGA Synuclein, Beta (SNCB, Accession NM_003085.2) is another B A

GGGGAGA GAM6509 target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6509 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6509 is therefore inhibition of SNCB, a GAM6509 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6509 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM6531 HD GGCAATATTCCAGGA HD (Accession NM_002111.3) is a GAM6531 target gene. HD BINDING A A

TAGGCTG SITE1 and HD BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 and HD BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6531 is therefore inhibition of HD. Accordingly, utilities of GAM6531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6531 HTR2C GGCAATATTCCAGGA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
TAGGCTG NM_000868.1) is another GAM6531 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6531 is therefore inhibition of HTR2C, a GAM6531 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM6541 CTNND2 TAAGTAAAGAGAGAA Catenin (cadherin- associated protein), Delta 2 (neural A A
GCCAGAA plakophilin- rel (CTNND2, Accession NM_001332.1) is a GAM6541 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6541 is therefore inhibition of CTNND2, a GAM6541 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM6541 HD TAAGTAAAGAGAGAA HD (Accession NM_002111.3) is another GAM6541 target gene. HD A A
GCCAGAA BINDING SITE1 and HD BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 and HD BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6541 is therefore inhibition of HD.

Accordingly, utilities of GAM6541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6541 OLR1 TAAGTAAAGAGAGAA GCCAGAA Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM6541 target gene. OLR1 BINDING SITE1 and OLR1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by OLR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE1 and OLR1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6541 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6541 is therefore inhibition of OLR1, a GAM6541 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6564 APLP2 TGGAATGGCTGAAGA CTGTGAA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM6564 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6564 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6564 is therefore inhibition of APLP2, a GAM6564 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM6564 FLNB TGGAATGGCTGAAGA CTGTGAA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM6564 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6564 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6564 is therefore inhibition of

FLNB, a GAM6564 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM6564 SLC17A7 TGGAATGGCTGAAGA A A CTGTGAA SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession NM_020309.1) is another GAM6564 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6564 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6564 is therefore inhibition of SLC17A7, a GAM6564 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM6564 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM6567 ARHA TGGAGAGATAGTGAT A A TTAGCTC Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) is a GAM6567 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6567 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6567 is therefore inhibition of ARHA, a GAM6567 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6567 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM6567 PSEN2 TGGAGAGATAGTGAT A A TTAGCTC PSEN2 (Accession NM_012486.1) is another GAM6567 target gene. PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by

PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6567 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6567 is therefore inhibition of PSEN2. Accordingly, utilities of GAM6567 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM6567 A A TGFB1 TTAGCTC TGGAGAGATAGTGAT TGFB1 (Accession NM_000660.1) is another GAM6567 target gene. TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6567 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6567 is therefore inhibition of TGFB1. Accordingly, utilities of GAM6567 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM6618 A A BACE2 CTTTGCC TTCAGGCACCAGGCA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is a GAM6618 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6618 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6618 is therefore inhibition of BACE2, a GAM6618 target gene which cleaves intracellularly the b- secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6618 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM6618 A A THOP1 CTTTGCC TTCAGGCACCAGGCA Thimet Oligopeptidase 1 (THOP1, Accession NM_003249.2) is another GAM6618 target gene. THOP1 BINDING SITE1 and THOP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by THOP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of THOP1 BINDING SITE1 and THOP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6618 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6618 is therefore inhibition of THOP1, a GAM6618 target gene which involves in the metabolism of neuropeptide and in cytoplasmic peptide degradation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6618 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with THOP1.The function of THOP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM520.

GAM6618 TRPM2 TTCAGGCACCAGGCA TRPM2 (Accession NM_003307.1) is another GAM6618 target gene. A A

CTTTGCC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6618 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6618 is therefore inhibition of TRPM2, a GAM6618 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM6618 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM6638 DLST CAGAGCTGCCTTTCC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

CTTCCTG oxo- glutarat (DLST, Accession NM_001933.2) is a GAM6638 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6638 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6638 is therefore inhibition of DLST, a GAM6638 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6638 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM240.

GAM6638 LRP1 CAGAGCTGCCTTTCC CTTCCTG Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM6638 target gene. LRP1 BINDING SITE1 and LRP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LRP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE1 and LRP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6638 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6638 is therefore inhibition of LRP1, a GAM6638 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6638 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM6638 OGDH CAGAGCTGCCTTTCC CTTCCTG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM6638 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6638 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6638 is therefore inhibition of OGDH, a GAM6638 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6638 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM6638 PSEN1 CAGAGCTGCCTTTCC CTTCCTG PSEN1 (Accession NM_000021.2) is another GAM6638 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6638 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6638 is therefore inhibition of PSEN1. Accordingly, utilities of GAM6638 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM6674 TGFB1 GAACCTTCAACTGCT TGFB1 (Accession NM_000660.1) is a GAM6674 target gene. TGFB1 A A

TAGCCTG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6674 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6674 is therefore inhibition of TGFB1. Accordingly, utilities of GAM6674 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM6700 IGF1 TCAGAGTAGGCTTGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGTAATC NM_000618.2) is a GAM6700 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6700 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6700 is therefore inhibition of IGF1, a GAM6700 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6700 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6700 HD GTGATTAAATTAAGG HD (Accession NM_002111.3) is another GAM6700 target gene. HD B A

CTCTTGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6700 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6700 is therefore inhibition of HD. Accordingly, utilities of GAM6700 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6773 BACE CTAGCCTGTTTGTCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

TCACCCC is a GAM6773 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6773 is therefore inhibition of BACE, a GAM6773 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6773 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6773 CNTF CTAGCCTGTTTGTCC Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A
TCACCCC another GAM6773 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6773 is therefore inhibition of CNTF, a GAM6773 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6773 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM6773 LRP1 CTAGCCTGTTTGTCC Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
TCACCCC macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM6773 target gene. LRP1 BINDING SITE1 and LRP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LRP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE1 and LRP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6773 is therefore inhibition of LRP1, a GAM6773 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6773 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM6773 MTNR1A CTAGCCTGTTTGTCC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A
TCACCCC another GAM6773 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6773 is therefore inhibition of MTNR1A, a GAM6773 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6773 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM6773 S100B CTAGCCTGTTTGTCC S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A
TCACCCC NM_006272.1) is another GAM6773 target gene. S100B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6773 is therefore inhibition of S100B, a GAM6773 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6773 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM6773 TNFRSF5 CTAGCCTGTTTGTCC TNFRSF5 (Accession NM_152854.1) is another GAM6773 target gene. A A
TCACCCC TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6773 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6773 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM6773 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM6774 APPBP2 AAATTGCCGAGATGA TGTTTGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM6774 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6774 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6774 is therefore inhibition of APPBP2, a GAM6774 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6774 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6774 IL1A CCAGAGGTGAGTCTT GATTTTG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM6774 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6774 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM6774 is therefore inhibition of IL1A, a GAM6774 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6774 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM6774 OLR1 CCAGAGGTGAGTCTT GATTTTG Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM6774 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding B A

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6774 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6774 is therefore inhibition of OLR1, a GAM6774 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6774 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6799 ARHA TCAAAGCTGCAGATT GCCTGTG Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A is a GAM6799 target gene. ARHA BINDING SITE1 and ARHA BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ARHA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE1 and ARHA BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6799 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6799 is therefore inhibition of ARHA, a GAM6799 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM6799 DLST TCAAAGCTGCAGATT GCCTGTG Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is another GAM6799 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6799 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6799 is therefore inhibition of DLST, a GAM6799 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM6799 TNF TCAAAGCTGCAGATT GCCTGTG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM6799 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6799 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6799 is therefore inhibition of TNF, a GAM6799 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM6799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM6799 VLDLR TCAAAGCTGCAGATT GCCTGTG Very Low Density Lipoprotein Receptor (VLDLR, Accession NM_003383.1) is another GAM6799 target gene. VLDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VLDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of VLDLR BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6799 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6799 is therefore inhibition of VLDLR, a GAM6799 target gene which may play a crucial role in triglyceride metabolism and therefore is associated with Alzheimer. Accordingly, utilities of GAM6799 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with VLDLR.The function of VLDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM6807 GYPA TGAGGTAAGTATGTT ATTGGAA Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is a GAM6807 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6807 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6807 is therefore inhibition of GYPA, a GAM6807 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6807 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6811 MPO TCAGGTTCCTGATTG GAGTTCT Myeloperoxidase (MPO, Accession NM_000250.1) is a GAM6811 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6811 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6811 is therefore inhibition of MPO, a GAM6811 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6811 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM6811 OLR1 TCAGGTTCCTGATTG GAGTTCT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM6811 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6811 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6811 is therefore inhibition of OLR1, a GAM6811 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6811 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6818 CTNND2 TTCTTTTTCCGCTTT CTGAGCC Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is a GAM6818 target gene. CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CTNND2, corresponding to target binding sites such as BINDING SITE A A

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE1 and CTNND2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6818 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6818 is therefore inhibition of CTNND2, a GAM6818 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM6818 GYPA TTCTTTTTCCGCTTT CTGAGCC Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM6818 target gene. GYPA BINDING SITE1 and GYPA BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GYPA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE1 and GYPA BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6818 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6818 is therefore inhibition of GYPA, a GAM6818 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6818 OLR1 TTCTTTTTCCGCTTT CTGAGCC Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM6818 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6818 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6818 is therefore inhibition of OLR1, a GAM6818 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6818 TNFRSF6 TTCTTTTTCCGCTTT TNFRSF6 (Accession NM_152875.1) is another GAM6818 target gene. A A

CTGAGCC TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6818 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6818 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM6818 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM6836 FHL2 ACTGCACTCTAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

AGGTGAT a GAM6836 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6836 is therefore inhibition of FHL2, a GAM6836 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM6836 IGF1 ACTGCACTCTAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AGGTGAT NM_000618.2) is another GAM6836 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6836 is therefore inhibition of IGF1, a GAM6836 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6836 PRND ACTGCACTCTAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

AGGTGAT another GAM6836 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6836 is therefore inhibition of PRND, a GAM6836 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6836 TFCP2 ACTGCACTCTAGCCT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A

AGGTGAT another GAM6836 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6836 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6836 is therefore inhibition of TFCP2, a GAM6836 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6836 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM6840 DHCR24 GCTGAATTTTGACTC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

CATCTCC NM_014762.1) is a GAM6840 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6840 is therefore inhibition of DHCR24, a GAM6840 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6840 HD GCTGAATTTTGACTC HD (Accession NM_002111.3) is another GAM6840 target gene. HD A A

CATCTCC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6840 is therefore inhibition of HD. Accordingly, utilities of GAM6840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM6840 ARHA GTTCTTCTGGGAGAA Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) B A

AAATGGC is another GAM6840 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6840 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6840 is therefore inhibition of ARHA, a GAM6840 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM6840 MME GTTCTTCTGGGAGAA Membrane Metallo- endopeptidase (neutral endopeptidase, B A

AAATGGC enkephalinase, (MME, Accession NM_000902.2) is another GAM6840 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6840 RNA are set forth in Tables 6 and 7,

hereby incorporated herein.

Another function of GAM6840 is therefore inhibition of MME, a GAM6840 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6840 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6842 IGF1 TCATATCATTTTGAA AGCTGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM6842 target gene. IGF1 BINDING SITE1 through IGF1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 through IGF1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM6842 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM6842 is therefore inhibition of IGF1, a GAM6842 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6842 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6842 IL1A TCATATCATTTTGAA AGCTGAG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM6842 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6842 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6842 is therefore inhibition of IL1A, a GAM6842 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6842 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM6858 PSEN2 GGTGCAGATCATGGA PSEN2 (Accession NM_000447.1) is a GAM6858 target gene. PSEN2 A A

TAGAGCT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6858 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6858 is therefore inhibition of PSEN2. Accordingly, utilities of GAM6858 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM6978 BACE2 TTCAGGCACCAGGCA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

CTTTGCC NM_138991.1) is a GAM6978 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6978 is therefore inhibition of BACE2, a GAM6978 target gene which cleaves intracellularly the b- secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM6978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM6978 THOP1 TTCAGGCACCAGGCA Thimet Oligopeptidase 1 (THOP1, Accession NM_003249.2) is A A

CTTTGCC another GAM6978 target gene. THOP1 BINDING SITE1 and THOP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by THOP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of THOP1 BINDING SITE1 and THOP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM6978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6978 is therefore inhibition of THOP1, a GAM6978 target gene which involves in the metabolism of neuropeptide and in cytoplasmic peptide degradation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with THOP1.The function of THOP1 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM520.

GAM6978 TRPM2 TTCAGGCACCAGGCA TRPM2 (Accession NM_003307.1) is another GAM6978 target gene. A A

CTTTGCC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6978 is therefore inhibition of TRPM2, a GAM6978 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM6978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM6982 GYPA GAAGGCAGTAGGTTG Glycophorin A (includes MN blood group) (GYPA, Accession A A

TATAGTT NM_002099.2) is a GAM6982 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6982 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6982 is therefore inhibition of GYPA, a GAM6982 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6982 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6982 IGF1 GAAGGCAGTAGGTTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TATAGTT NM_000618.2) is another GAM6982 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6982 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6982 is therefore inhibition of IGF1, a GAM6982 target gene which are structurally and functionally

related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6982 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6994 ACE TTGCCTAGGCTGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TGCAGTG (ACE, Accession NM_152831.1) is a GAM6994 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6994 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6994 is therefore inhibition of ACE, a GAM6994 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM6994 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM6994 ADAM17 TTGCCTAGGCTGGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TGCAGTG factor, (ADAM17, Accession NM_021832.1) is another GAM6994 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6994 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6994 is therefore inhibition of ADAM17, a GAM6994 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6994 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM6994 IAPP TTGCCTAGGCTGGAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
TGCAGTG another GAM6994 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6994 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6994 is therefore inhibition of IAPP, a GAM6994 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM6994 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM6994 IGF1 TTGCCTAGGCTGGAG TGCAGTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM6994 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6994 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6994 is therefore inhibition of IGF1, a GAM6994 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM6994 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM6994 MAPT TTGCCTAGGCTGGAG TGCAGTG Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM6994 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6994 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM6994 is therefore inhibition of MAPT, a GAM6994 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6994 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM6994 NOTCH1 TTGCCTAGGCTGGAG Notch (Drosophila) Homolog 1 (translocation- associated) A A

TGCAGTG (NOTCH1, Accession NM_017617.2) is another GAM6994 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6994 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6994 is therefore inhibition of NOTCH1, a GAM6994 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM6994 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM6996 ABCD1 TTCCTGGTGGAGGCA ABCD1 (Accession NM_000033.2) is a GAM6996 target gene. ABCD1 A A

TTCGGAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6996 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM6996 is therefore inhibition of ABCD1. Accordingly, utilities of GAM6996 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM6996 BLMH TTCCTGGTGGAGGCA Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is another A A

TTCGGAG GAM6996 target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM6996 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM6996 is therefore inhibition of BLMH, a GAM6996 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM6996 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM7017 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM7017 target gene. HD BINDING A A

ACTTGTA SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7017 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7017 is therefore inhibition of HD. Accordingly, utilities of GAM7017 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7017 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

ACTTGTA NM_000868.1) is another GAM7017 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7017 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7017 is therefore inhibition of HTR2C, a GAM7017 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7017 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7017 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGTA NM_000618.2) is another GAM7017 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7017 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7017 is therefore inhibition of IGF1, a GAM7017 target gene which are structurally and functionally

related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7017 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7017 PSEN2 TCTGCTGTGATGGAC A A ACTTGTA PSEN2 (Accession NM_000447.1) is another GAM7017 target gene. PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7017 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7017 is therefore inhibition of PSEN2. Accordingly, utilities of GAM7017 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM7017 TNFRSF6 TCTGCTGTGATGGAC A A ACTTGTA TNFRSF6 (Accession NM_152872.1) is another GAM7017 target gene. TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7017 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7017 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM7017 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM7022 APPBP2 TTGGTTGCTGATGAG A A CTTTGAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM7022 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7022 is therefore inhibition of APPBP2, a GAM7022 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7022 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7022 BACE TTGGTTGCTGATGAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

CTTTGAG is another GAM7022 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7022 is therefore inhibition of BACE, a GAM7022 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7022 IGF1 TTGGTTGCTGATGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CTTTGAG NM_000618.2) is another GAM7022 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7022 is therefore inhibition of IGF1, a GAM7022 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7022 MTNR1A TTGGTTGCTGATGAG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

CTTTGAG another GAM7022 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7022 is therefore inhibition of MTNR1A, a GAM7022 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM7067 ADAM10 TTGAGCAAAATATCT A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A
GGTTTCA Accession NM_001110.1) is a GAM7067 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7067 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7067 is therefore inhibition of ADAM10, a GAM7067 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7067 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM7067 APPBP2 TTGAGCAAAATATCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGTTTCA Protein 2 (APPBP2, Accession NM_006380.2) is another GAM7067 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7067 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7067 is therefore inhibition of APPBP2, a GAM7067 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7067 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM7067 GYPA TTGAGCAAAATATCT Glycophorin A (includes MN blood group) (GYPA, Accession A A
GGTTTCA NM_002099.2) is another GAM7067 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7067 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7067 is therefore inhibition of GYPA, a GAM7067 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7067 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7067 HD TTGAGCAAAATATCT HD (Accession NM_002111.3) is another GAM7067 target gene. HD A A
GGTTTCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7067 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7067 is therefore inhibition of HD. Accordingly, utilities of GAM7067 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7067 OLR1 TTGAGCAAAATATCT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A
GGTTTCA (OLR1, Accession NM_002543.1) is another GAM7067 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7067 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7067 is therefore inhibition of OLR1, a GAM7067 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7067 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7078 HD TAGGGGGTCACCTAT HD (Accession NM_002111.3) is a GAM7078 target gene. HD BINDING A A
GTGGGAG SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7078 is therefore inhibition of HD. Accordingly, utilities of GAM7078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7078 HD CTCCTACAACTGACT HD (Accession NM_002111.3) is another GAM7078 target gene. HD B A
CTCTGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7078 is therefore inhibition of HD. Accordingly, utilities of GAM7078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7078 IGF1 CTCCTACAACTGACT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession B A
CTCTGGA NM_000618.2) is another GAM7078 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7078 is therefore inhibition of IGF1, a GAM7078 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7080 APLP2 TTTCCACAGCGGCCA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A
ATTCTTC NM_001642.1) is a GAM7080 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7080 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7080 is therefore inhibition of APLP2, a GAM7080 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7080 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM7080 HTR2C TTTCCACAGCGGCCA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
ATTCTTC NM_000868.1) is another GAM7080 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7080 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7080 is therefore inhibition of HTR2C, a GAM7080 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7080 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7080 TNF TTTCCACAGCGGCCA Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A
ATTCTTC Accession NM_000594.2) is another GAM7080 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7080 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7080 is therefore inhibition of TNF, a GAM7080 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM7080 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7095 ADAMTS5 TGTGAGAGAAATGGC A Disintegrin- like and Metalloprotease (reprolysin type) with A A
AAGTTGG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM7095 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7095 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7095 is therefore inhibition of ADAMTS5, a GAM7095 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7095 CASP3 TGTGAGAGAAATGGC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A
AAGTTGG Accession NM_032991.1) is another GAM7095 target gene. CASP3 BINDING SITE1 and CASP3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE1 and CASP3 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7095 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7095 is therefore inhibition of CASP3, a GAM7095 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM7095 MAPT TGTGAGAGAAATGGC Microtubule- associated Protein Tau (MAPT, Accession A A
AAGTTGG NM_173727.1) is another GAM7095 target gene. MAPT BINDING SITE1 through MAPT BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 through MAPT BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM7095 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7095 is therefore inhibition of MAPT, a GAM7095 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM7095 MME TGTGAGAGAAATGGC AAGTTGG Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is another GAM7095 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7095 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7095 is therefore inhibition of MME, a GAM7095 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7102 ACE TCACTGCAACCTCCA CCTCCCG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM7102 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7102 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7102 is therefore inhibition of ACE, a GAM7102 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7102 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7102 IAPP TCACTGCAACCTCCA CCTCCCG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM7102 target gene. IAPP BINDING SITE is a target binding A A

site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7102 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7102 is therefore inhibition of IAPP, a GAM7102 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM7102 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7124 ACHE TAGCACCTTCTGAAA TAACGTG Acetylcholinesterase (YT blood group) (ACHE, Accession NM_015831.1) is a GAM7124 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7124 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7124 is therefore inhibition of ACHE, a GAM7124 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM7124 SNCA TAGCACCTTCTGAAA TAACGTG SNCA (Accession NM_000345.2) is another GAM7124 target gene. SNCA BINDING SITE1 and SNCA BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SNCA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE1 and SNCA BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7124 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7124 is therefore inhibition of SNCA. Accordingly, utilities of GAM7124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM7135 APPBP2 TTGGTTGCTGATGAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
CTTTGAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM7135 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7135 is therefore inhibition of APPBP2, a GAM7135 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7135 BACE TTGGTTGCTGATGAG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A
CTTTGAG is another GAM7135 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7135 is therefore inhibition of BACE, a GAM7135 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7135 IGF1 TTGGTTGCTGATGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CTTTGAG NM_000618.2) is another GAM7135 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7135 is therefore inhibition of

IGF1, a GAM7135 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7135 MTNR1A TTGGTTGCTGATGAG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

CTTTGAG another GAM7135 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7135 is therefore inhibition of MTNR1A, a GAM7135 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM7140 ADAMTS5 TACAGGCAGGCACAG A Disintegrin- like and Metalloprotease (reprolysin type) with A A

AGGCAGT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM7140 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7140 is therefore inhibition of ADAMTS5, a GAM7140 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7140 APBA2 TACAGGCAGGCACAG Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

AGGCAGT 2 (X11- l (APBA2, Accession NM_005503.2) is another GAM7140 target

gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7140 is therefore inhibition of APBA2, a GAM7140 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7140 DLST TACAGGCAGGCACAG AA AGGCAGT Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is another GAM7140 target gene. DLST BINDING SITE1 and DLST BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DLST, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE1 and DLST BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7140 is therefore inhibition of DLST, a GAM7140 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM7140 NGB TACAGGCAGGCACAG AA AGGCAGT Neuroglobin (NGB, Accession NM_021257.2) is another GAM7140 target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7140 is therefore inhibition of NGB, a GAM7140 target gene which has function in oxygen transport

and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7140 A A SNCG AGGCAGT TACAGGCAGGCACAG SYNUCLEIN, GAMMA (SNCG, Accession NM_003087.1) is another GAM7140 target gene. SNCG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SNCG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7140 is therefore inhibition of SNCG, a GAM7140 target gene which plays a role in neurofilament network integrity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCG.The function of SNCG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7140 A A TFCP2 AGGCAGT TACAGGCAGGCACAG Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM7140 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7140 is therefore inhibition of TFCP2, a GAM7140 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM7140 A A TGFB1 AGGCAGT TACAGGCAGGCACAG TGFB1 (Accession NM_000660.1) is another GAM7140 target gene. TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TGFB1, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7140 is therefore inhibition of TGFB1. Accordingly, utilities of GAM7140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM7146 APLP2 TGCTGTAGTATGTAT ATAGTAT Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is a GAM7146 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7146 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7146 is therefore inhibition of APLP2, a GAM7146 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM7146 MME TGCTGTAGTATGTAT ATAGTAT Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM7146 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7146 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7146 is therefore inhibition of MME, a GAM7146 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7162 HD CTGGGTGGCCTTCAG TCCATGA HD (Accession NM_002111.3) is a GAM7162 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as A A

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7162 is therefore inhibition of HD. Accordingly, utilities of GAM7162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7162 PLAU CTGGGTGGCCTTCAG Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

TCCATGA is another GAM7162 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7162 is therefore inhibition of PLAU, a GAM7162 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM7162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM7162 TNFRSF5 CTGGGTGGCCTTCAG TNFRSF5 (Accession NM_001250.3) is another GAM7162 target gene. A A

TCCATGA TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7162 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM7162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM7162 APBB2 TCAGGCTGAGGTCAT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member B A

CTGCATC 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM7162 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM7162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7162 is therefore inhibition of APBB2, a GAM7162 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7162 BACE2 TCAGGCTGAGGTCAT CTGCATC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM7162 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7162 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM7162 is therefore inhibition of BACE2, a GAM7162 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7162 TRPM2 TCAGGCTGAGGTCAT CTGCATC TRPM2 (Accession NM_003307.1) is another GAM7162 target gene. TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7162 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM7162 is therefore inhibition of TRPM2, a GAM7162 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM7162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7166 CAV1 AGGGAGTTTACATGT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
TTTCTAA NM_001753.3) is a GAM7166 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7166 is therefore inhibition of CAV1, a GAM7166 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7166 MME AGGGAGTTTACATGT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
TTTCTAA enkephalinase, (MME, Accession NM_007287.1) is another GAM7166 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7166 is therefore inhibition of MME, a GAM7166 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7169 ACE TAGACTGAGGCTTCC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TGCAGGG (ACE, Accession NM_152831.1) is a GAM7169 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7169 is therefore inhibition of ACE, a GAM7169 target gene which Angiotensin I- converting enzyme

(dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7169 DHCR24 TAGACTGAGGCTTCC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGCAGGG NM_014762.1) is another GAM7169 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7169 is therefore inhibition of DHCR24, a GAM7169 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7169 DLST TAGACTGAGGCTTCC Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TGCAGGG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM7169 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7169 is therefore inhibition of DLST, a GAM7169 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM7169 DSCR1 TAGACTGAGGCTTCC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

TGCAGGG NM_004414.3) is another GAM7169 target gene. DSCR1 BINDING SITE1 and

DSCR1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DSCR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE1 and DSCR1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7169 is therefore inhibition of DSCR1, a GAM7169 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM7169 A A TGFB1 TAGACTGAGGCTTCC TGCAGGG TGFB1 (Accession NM_000660.1) is another GAM7169 target gene. TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7169 is therefore inhibition of TGFB1. Accordingly, utilities of GAM7169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM7199 A A CAV2 TGGCAAAGAAGGCAG TACAGTT Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM7199 target gene. CAV2 BINDING SITE1 and CAV2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CAV2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE1 and CAV2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7199 is therefore inhibition of CAV2, a GAM7199 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM55.

GAM7201 ACE TGTCCTTTGTTTTGA GATGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM7201 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7201 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7201 is therefore inhibition of ACE, a GAM7201 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7201 ADAM17 TGTCCTTTGTTTTGA GATGGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is another GAM7201 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7201 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7201 is therefore inhibition of ADAM17, a GAM7201 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7201 TNF TGTCCTTTGTTTTGA GATGGAG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM7201 target gene. TNF BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7201 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7201 is therefore inhibition of

TNF, a GAM7201 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM7201 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7212 A2M GGCCAGGACTCTTGC AGAACTG Alpha- 2- macroglobulin (A2M, Accession NM_000014.3) is a GAM7212 target gene. A2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by A2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of A2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7212 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7212 is therefore inhibition of A2M, a GAM7212 target gene which inhibit all four classes of proteinases and therefore is associated with Alzheimer. Accordingly, utilities of GAM7212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with A2M.The function of A2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1653.

GAM7212 IL1B GGCCAGGACTCTTGC AGAACTG Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another GAM7212 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7212 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7212 is therefore inhibition of IL1B, a GAM7212 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM7212 SERPINA3 GGCCAGGACTCTTGC AGAACTG Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha- 1 antiprotei (SERPINA3, Accession NM_001085.2) is another GAM7212 target gene. SERPINA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences A A

of SERPINA3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7212 is therefore inhibition of SERPINA3, a GAM7212 target gene which is a member of the serpin family of serine protease inhibitors. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SERPINA3.The function of SERPINA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM7212 SLC6A4 GGCCAGGACTCTTGC AGAACTG Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM7212 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7212 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7212 is therefore inhibition of SLC6A4, a GAM7212 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM7212 TFCP2 GGCCAGGACTCTTGC AGAACTG Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM7212 target gene. TFCP2 BINDING SITE1 through TFCP2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by TFCP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE1 through TFCP2 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM7212 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7212 is therefore inhibition of TFCP2, a GAM7212 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated

with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM7241 A MPO A CTCAGTGTGAAGAAC TACGGGT Myeloperoxidase (MPO, Accession NM_000250.1) is a GAM7241 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7241 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7241 is therefore inhibition of MPO, a GAM7241 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7241 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM7250 A ADAM17 A GAAGAGCTGTGTGCT GTGATGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_003183.3) is a GAM7250 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7250 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7250 is therefore inhibition of ADAM17, a GAM7250 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7250 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7255 A DSCR1 A TGGTCTCTTGAAAGA GGCTCTT Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM7255 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7255 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7255 is therefore inhibition of DSCR1, a GAM7255 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM7255 IL1B TGGTCTCTTGAAAGA GGCTCTT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another GAM7255 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7255 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7255 is therefore inhibition of IL1B, a GAM7255 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM7257 IAPP TGGGGTTTCTCCATG TTGGTCA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a GAM7257 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7257 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7257 is therefore inhibition of IAPP, a GAM7257 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM7257 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7260 MME ATGTCAGTGAAGAGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TCTGGCA enkephalinase, (MME, Accession NM_007289.1) is a GAM7260 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7260 is therefore inhibition of MME, a GAM7260 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7260 A A PSEN1 ATGTCAGTGAAGAGG TCTGGCA PSEN1 (Accession NM_000021.2) is another GAM7260 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7260 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7260 is therefore inhibition of PSEN1. Accordingly, utilities of GAM7260 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM7264 A A MAPK10 ACTGGCACAGACATC TGTCAAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138981.1) is a GAM7264 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7264 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7264 is therefore inhibition of MAPK10, a GAM7264 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7264 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM55.

GAM7264 A A MTNR1A ACTGGCACAGACATC TGTCAAG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM7264 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7264 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7264 is therefore inhibition of MTNR1A, a GAM7264 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7264 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM7272 A A APP CTGGGCAGTAATGTA GTTGAGA APP (Accession NM_000484.1) is a GAM7272 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7272 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7272 is therefore inhibition of APP. Accordingly, utilities of GAM7272 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM7302 A A HTR2C GAAACTAGTGTTGGG ACAAAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is a GAM7302 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7302 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7302 is therefore inhibition of HTR2C, a GAM7302 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7302 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7302 MME GAAACTAGTGTTGGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
ACAAAGG enkephalinase, (MME, Accession NM_007288.1) is another GAM7302 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7302 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7302 is therefore inhibition of MME, a GAM7302 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7302 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7320 GYPA GGTTCTCAAATGAGG Glycophorin A (includes MN blood group) (GYPA, Accession A A
GACATTT NM_002099.2) is a GAM7320 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7320 is therefore inhibition of GYPA, a GAM7320 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7320 NGB GGTTCTCAAATGAGG Neuroglobin (NGB, Accession NM_021257.2) is another GAM7320 A A
GACATTT target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7320 is therefore inhibition of NGB, a GAM7320 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7320 PLAU GGTTCTCAAATGAGG Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GACATTT is another GAM7320 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7320 is therefore inhibition of PLAU, a GAM7320 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM7320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM7320 PSEN1 GGTTCTCAAATGAGG PSEN1 (Accession NM_000021.2) is another GAM7320 target gene. A A

GACATTT PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7320 is therefore inhibition of PSEN1. Accordingly, utilities of GAM7320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM7320 CHAT ACATTTCCAATGTTT Choline Acetyltransferase (CHAT, Accession NM_020986.1) is B A

GGGGACA another GAM7320 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7320 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7320 is therefore inhibition of CHAT, a GAM7320 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7331 FHL2 ACTGCACTCCAGCCT ATGGGAT A A Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM7331 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7331 is therefore inhibition of FHL2, a GAM7331 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7331 IGF1 ACTGCACTCCAGCCT ATGGGAT A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM7331 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7331 is therefore inhibition of IGF1, a GAM7331 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7331 PRND ACTGCACTCCAGCCT A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is

ATGGGAT another GAM7331 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7331 is therefore inhibition of PRND, a GAM7331 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7345 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM7345 target gene. HD BINDING A A

ACTTGTA SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7345 is therefore inhibition of HD. Accordingly, utilities of GAM7345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7345 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

ACTTGTA NM_000868.1) is another GAM7345 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7345 is therefore inhibition of HTR2C, a GAM7345 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7345 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGTA NM_000618.2) is another GAM7345 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7345 is therefore inhibition of IGF1, a GAM7345 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7345 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM7345 target gene. A A

ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7345 is therefore inhibition of PSEN2. Accordingly, utilities of GAM7345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM7345 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM7345 target gene. A A

ACTTGTA TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7345 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM7345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM7349 ADAM17 TGGAGTGTCTGGAGG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

TGTCTCT factor, (ADAM17, Accession NM_021832.1) is a GAM7349 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7349 is therefore inhibition of ADAM17, a GAM7349 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7349 DHCR24 TGGAGTGTCTGGAGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGTCTCT NM_014762.1) is another GAM7349 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7349 is therefore inhibition of DHCR24, a GAM7349 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7349 HD TGGAGTGTCTGGAGG HD (Accession NM_002111.3) is another GAM7349 target gene. HD A A

TGTCTCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7349 is therefore inhibition of HD. Accordingly, utilities of GAM7349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with HD.

GAM7349 OLR1 TGGAGTGTCTGGAGG Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A TGTCTCT (OLR1, Accession NM_002543.1) is another GAM7349 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7349 is therefore inhibition of OLR1, a GAM7349 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7349 PLAU TGGAGTGTCTGGAGG Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A TGTCTCT is another GAM7349 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7349 is therefore inhibition of PLAU, a GAM7349 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM7349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM7349 TGFB1 TGGAGTGTCTGGAGG TGFB1 (Accession NM_000660.1) is another GAM7349 target gene. A A TGTCTCT TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7349 is therefore inhibition of TGFB1. Accordingly, utilities of GAM7349 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM7349 TNFSF5 TGGAGTGTCTGGAGG TNFSF5 (Accession NM_000074.1) is another GAM7349 target gene. A A

TGTCTCT TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7349 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM7349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM7350 ADAM17 CTAATTGTTCCTGCA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

GGTAGTA factor, (ADAM17, Accession NM_021832.1) is a GAM7350 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7350 is therefore inhibition of ADAM17, a GAM7350 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7363 HD GTCAGCAAGGAGGGG HD (Accession NM_002111.3) is a GAM7363 target gene. HD BINDING A A

TGGACAA SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7363 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7363 is therefore inhibition of HD. Accordingly, utilities of GAM7363 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7366 APPBP2 TATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM7366 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7366 is therefore inhibition of APPBP2, a GAM7366 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7366 FHL2 TATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM7366 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7366 is therefore inhibition of FHL2, a GAM7366 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7366 HD TATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM7366 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7366 is therefore inhibition of HD. Accordingly, utilities of GAM7366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with HD.

GAM7366 IGF1 TATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM7366 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7366 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7366 is therefore inhibition of IGF1, a GAM7366 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7366 PRND TATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM7366 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM7366 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7366 is therefore inhibition of PRND, a GAM7366 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7369 APBB2 TCTTGGTGCTTTTGC TGGATGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM7369 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7369 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7369 is therefore inhibition of APBB2, a GAM7369 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7369 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7369 APOC1 TCTTGGTGCTTTTGC TGGATGA Apolipoprotein C- I (APOC1, Accession NM_001645.2) is another GAM7369 target gene. APOC1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APOC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APOC1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7369 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7369 is therefore inhibition of APOC1, a GAM7369 target gene which appears to modulate the interaction of apoe with beta- migrating vldl and inhibit binding of beta- vldl to the ldl receptor- related protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7369 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APOC1.The function of APOC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM7369 CHAT TCTTGGTGCTTTTGC TGGATGA Choline Acetyltransferase (CHAT, Accession NM_020986.1) is another GAM7369 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7369 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7369 is therefore inhibition of CHAT, a GAM7369 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7369 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7369 CLU TCTTGGTGCTTTTGC TGGATGA Clusterin (complement lysis inhibitor, SP- 40,40, sulfated glycoprotein (CLU, Accession NM_001831.1) is another GAM7369 target A A

gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7369 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7369 is therefore inhibition of CLU, a GAM7369 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7369 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM7371 A2M AGAAGGTTGGGGCTG Alpha- 2- macroglobulin (A2M, Accession NM_000014.3) is a A A GAGGTCT GAM7371 target gene. A2M BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by A2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of A2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7371 is therefore inhibition of A2M, a GAM7371 target gene which inhibit all four classes of proteinases and therefore is associated with Alzheimer. Accordingly, utilities of GAM7371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with A2M.The function of A2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1653.

GAM7371 BACE AGAAGGTTGGGGCTG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A GAGGTCT is another GAM7371 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7371 is therefore inhibition of BACE, a GAM7371 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7371 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7371 SLC17A7 AGAAGGTTGGGGCTG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A
GAGGTCT NM_020309.1) is another GAM7371 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7371 is therefore inhibition of SLC17A7, a GAM7371 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM7371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM7371 SLC6A4 AGAAGGTTGGGGCTG Solute Carrier Family 6 (neurotransmitter transporter, A A
GAGGTCT serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM7371 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7371 is therefore inhibition of SLC6A4, a GAM7371 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM7374 IL1B GCAGCTGTTTATTTA Interleukin 1, Beta (IL1B, Accession NM_000576.2) is a GAM7374 A A
GAACCTG target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM7374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7374 is therefore inhibition of IL1B, a GAM7374 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM7374 MME GCAGCTGTTTATTTA GAACCTG Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007287.1) is another GAM7374 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7374 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7374 is therefore inhibition of MME, a GAM7374 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7374 TNFSF5 GCAGCTGTTTATTTA GAACCTG TNFSF5 (Accession NM_000074.1) is another GAM7374 target gene. TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7374 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7374 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM7374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM7374 ACT CAGATCTGGGATACA GCTGTGG Activator of CAMP- responsive Element Modulator (CR (ACT, Accession NM_020482.3) is another GAM7374 target gene. ACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. B A

Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7374 is therefore inhibition of ACT, a GAM7374 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM7374 APBB2 CAGATCTGGGATACA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member B A

GCTGTGG 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM7374 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7374 is therefore inhibition of APBB2, a GAM7374 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7400 TNFRSF6 TTAATGCTTTTTGTC TNFRSF6 (Accession NM_152873.1) is a GAM7400 target gene. A A

ATACTCA TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7400 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM7400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM7415 ADAMTS5 TACAGGCAGGCACAG A Disintegrin- like and Metalloprotease (reprolysin type) with A A

AGGCAGT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM7415 target gene.

ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7415 is therefore inhibition of ADAMTS5, a GAM7415 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7415 APBA2 TACAGGCAGGCACAG Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

AGGCAGT 2 (X11- l (APBA2, Accession NM_005503.2) is another GAM7415 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7415 is therefore inhibition of APBA2, a GAM7415 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7415 DLST TACAGGCAGGCACAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

AGGCAGT oxo- glutarat (DLST, Accession NM_001933.2) is another GAM7415 target gene. DLST BINDING SITE1 and DLST BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DLST, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE1 and DLST BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7415 is therefore inhibition of

DLST, a GAM7415 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM7415 A A NGB TACAGGCAGGCACAG AGGCAGT Neuroglobin (NGB, Accession NM_021257.2) is another GAM7415 target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7415 is therefore inhibition of NGB, a GAM7415 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7415 A A SNCG TACAGGCAGGCACAG AGGCAGT SYNUCLEIN, GAMMA (SNCG, Accession NM_003087.1) is another GAM7415 target gene. SNCG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SNCG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7415 is therefore inhibition of SNCG, a GAM7415 target gene which plays a role in neurofilament network integrity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCG.The function of SNCG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7415 A A TFCP2 TACAGGCAGGCACAG AGGCAGT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM7415 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7415 is therefore inhibition of TFCP2, a GAM7415 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM7415 TGFB1 TACAGGCAGGCACAG TGFB1 (Accession NM_000660.1) is another GAM7415 target gene. A A

AGGCAGT TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TGFB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7415 is therefore inhibition of TGFB1. Accordingly, utilities of GAM7415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM7440 IAPP TGTGACTGAGGTGCG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a A A

CATAAAG GAM7440 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7440 is therefore inhibition of IAPP, a GAM7440 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM7440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7446 ACE TCACTGCAACCTCTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

CTGCCTG (ACE, Accession NM_152831.1) is a GAM7446 target gene. ACE BINDING

SITE1 and ACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE1 and ACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7446 is therefore inhibition of ACE, a GAM7446 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7446 APBA1 TCACTGCAACCTCTG CTGCCTG A A Amyloid Beta (A4) Precursor Protein- binding, Family A, Member 1 (X11) (APBA1, Accession NM_001163.2) is another GAM7446 target gene. APBA1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of APBA1, a GAM7446 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM7446 APLP1 TCACTGCAACCTCTG CTGCCTG A A Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession NM_005166.2) is another GAM7446 target gene. APLP1 BINDING SITE1 and APLP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APLP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE1 and APLP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of APLP1, a GAM7446 target gene which is a membrane- associated

glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM7446 APPBP2 TCACTGCAACCTCTG CTGCCTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is another GAM7446 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7446 is therefore inhibition of APPBP2, a GAM7446 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7446 AVP TCACTGCAACCTCTG CTGCCTG AVP (Accession NM_000490.2) is another GAM7446 target gene. AVP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7446 is therefore inhibition of AVP. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM7446 CHAT TCACTGCAACCTCTG CTGCCTG Choline Acetyltransferase (CHAT, Accession NM_020985.1) is another GAM7446 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7446 is therefore inhibition of

CHAT, a GAM7446 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7446 CTNND2 TCACTGCAACCTCTG CTGCCTG Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM7446 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7446 is therefore inhibition of CTNND2, a GAM7446 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM7446 FLNB TCACTGCAACCTCTG CTGCCTG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM7446 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7446 is therefore inhibition of FLNB, a GAM7446 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM7446 HD TCACTGCAACCTCTG CTGCCTG HD (Accession NM_002111.3) is another GAM7446 target gene. HD BINDING SITE1 and HD BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING A A

SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 and HD BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of HD. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7446 HTR2A TCACTGCAACCTCTG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
CTGCCTG NM_000621.1) is another GAM7446 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of HTR2A, a GAM7446 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM7446 HTR2C TCACTGCAACCTCTG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
CTGCCTG NM_000868.1) is another GAM7446 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of HTR2C, a GAM7446 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7446 IAPP TCACTGCAACCTCTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
CTGCCTG another GAM7446 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of IAPP, a GAM7446 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7446 MAPT TCACTGCAACCTCTG CTGCCTG A A Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM7446 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of MAPT, a GAM7446 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM7446 MPO TCACTGCAACCTCTG CTGCCTG A A Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM7446 target gene. MPO BINDING SITE1 and MPO BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MPO, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE1 and MPO BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of MPO, a GAM7446 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM7446 A A MTNR1A CTGCCTG TCACTGCAACCTCTG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM7446 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of MTNR1A, a GAM7446 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM7446 A A NGB CTGCCTG TCACTGCAACCTCTG Neuroglobin (NGB, Accession NM_021257.2) is another GAM7446 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of NGB, a GAM7446 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7446 A A OGDH CTGCCTG TCACTGCAACCTCTG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM7446 target gene. OGDH BINDING SITE1 and OGDH BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by OGDH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE1 and OGDH BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM7446 is therefore inhibition of OGDH, a GAM7446 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM7446 A A PSEN1 TCACTGCAACCTCTG CTGCCTG PSEN1 (Accession NM_000021.2) is another GAM7446 target gene. PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of PSEN1. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM7446 A A TRPM2 TCACTGCAACCTCTG CTGCCTG TRPM2 (Accession NM_003307.1) is another GAM7446 target gene. TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRPM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE1 and TRPM2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7446 is therefore inhibition of TRPM2, a GAM7446 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM7446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7449 A A IGF1 GGTAGCTTATTAAAG AAACTCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM7449 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7449 RNA are set forth in Tables 6 and 7,

hereby incorporated herein.

A function of GAM7449 is therefore inhibition of IGF1, a GAM7449 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7449 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7449 NOTCH1 GGGGTTTCTGTAGGC Notch (Drosophila) Homolog 1 (translocation- associated) B A

ACTTTAT (NOTCH1, Accession NM_017617.2) is another GAM7449 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7449 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7449 is therefore inhibition of NOTCH1, a GAM7449 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7449 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7464 BAX ATTTATTTTCCCTCA BCL2- associated X Protein (BAX, Accession NM_138765.1) is a A A

AGTACCT GAM7464 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7464 is therefore inhibition of BAX, a GAM7464 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM7464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM7464 BAX AGGTAGGGAGGGTAG BCL2- associated X Protein (BAX, Accession NM_004324.2) is B A

ATGCTCT another GAM7464 target gene. BAX BINDING SITE1 and BAX BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BAX, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE1 and BAX BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7464 is therefore inhibition of BAX, a GAM7464 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM7464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM7464 DLST AGGTAGGGAGGGTAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- B A

ATGCTCT oxo- glutarat (DLST, Accession NM_001933.2) is another GAM7464 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7464 is therefore inhibition of DLST, a GAM7464 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM7464 MPO AGGTAGGGAGGGTAG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM7464 B A

ATGCTCT target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7464 is therefore inhibition of MPO, a GAM7464 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM7464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM7464 TRPM2 AGGTAGGGAGGGTAG TRPM2 (Accession NM_003307.1) is another GAM7464 target gene. B A

ATGCTCT TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7464 is therefore inhibition of TRPM2, a GAM7464 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM7464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7473 ACE TCGGCAGGGAACAGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

AAGTAGG (ACE, Accession NM_152831.1) is a GAM7473 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7473 is therefore inhibition of ACE, a GAM7473 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7473 BACE TCGGCAGGGAACAGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

AAGTAGG is another GAM7473 target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING

SITE1 and BACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7473 is therefore inhibition of BACE, a GAM7473 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7473 HTR2C TCGGCAGGGAACAGG AAGTAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM7473 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7473 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7473 is therefore inhibition of HTR2C, a GAM7473 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7473 LRP1 TCGGCAGGGAACAGG AAGTAGG Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM7473 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7473 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7473 is therefore inhibition of LRP1, a GAM7473 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM1975.

GAM7473 MT3 TCGGCAGGGAACAGG Metallothionein 3 (MT3, Accession NM_005954.1) is another A A
AAGTAGG GAM7473 target gene. MT3 BINDING SITE1 and MT3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MT3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MT3 BINDING SITE1 and MT3 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7473 is therefore inhibition of MT3, a GAM7473 target gene which inhibits survival and neurite formation of cortical neurons in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MT3.The function of MT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3890.

GAM7477 AVP TGAGGACAGGAGGTT AVP (Accession NM_000490.2) is a GAM7477 target gene. AVP A A
GTGAGTT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7477 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7477 is therefore inhibition of AVP. Accordingly, utilities of GAM7477 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM7477 IL1B TGAGGACAGGAGGTT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A
GTGAGTT GAM7477 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7477 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7477 is therefore inhibition of IL1B, a GAM7477 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7477 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM604.

GAM7477 MAPK10 TGAGGACAGGAGGTT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A
GTGAGTT NM_138980.1) is another GAM7477 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7477 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7477 is therefore inhibition of MAPK10, a GAM7477 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7477 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM7477 MME TGAGGACAGGAGGTT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GTGAGTT enkephalinase, (MME, Accession NM_000902.2) is another GAM7477 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7477 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7477 is therefore inhibition of MME, a GAM7477 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7477 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7520 NGB TGCCTAGGCAGGACG Neuroglobin (NGB, Accession NM_021257.2) is a GAM7520 target A A
GAATGCA gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7520 RNA are set forth in Tables 6 and 7, hereby incorporated

herein.

A function of GAM7520 is therefore inhibition of NGB, a GAM7520 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7520 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7520 A A RAGE GAATGCA TGCCTAGGCAGGACG Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another GAM7520 target gene. RAGE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7520 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7520 is therefore inhibition of RAGE, a GAM7520 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM7520 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM7520 A A SLC17A7 GAATGCA TGCCTAGGCAGGACG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession NM_020309.1) is another GAM7520 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7520 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7520 is therefore inhibition of SLC17A7, a GAM7520 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM7520 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM7520 A A SNCG TGCCTAGGCAGGACG SYNUCLEIN, GAMMA (SNCG, Accession NM_003087.1) is another

GAATGCA GAM7520 target gene. SNCG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SNCG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCG BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7520 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7520 is therefore inhibition of SNCG, a GAM7520 target gene which plays a role in neurofilament network integrity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7520 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCG.The function of SNCG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7530 ACE TAGCAGCACATAATG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
GTTTGAA (ACE, Accession NM_152831.1) is a GAM7530 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7530 is therefore inhibition of ACE, a GAM7530 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7530 ADAM10 TAGCAGCACATAATG A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A
GTTTGAA Accession NM_001110.1) is another GAM7530 target gene. ADAM10 BINDING SITE1 and ADAM10 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ADAM10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE1 and ADAM10 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7530 is therefore inhibition of ADAM10, a GAM7530 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM7530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM7530 HTR2A TAGCAGCACATAATG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
GTTTGAA NM_000621.1) is another GAM7530 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7530 is therefore inhibition of HTR2A, a GAM7530 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM7530 MME TAGCAGCACATAATG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GTTTGAA enkephalinase, (MME, Accession NM_000902.2) is another GAM7530 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7530 is therefore inhibition of MME, a GAM7530 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7530 SLC6A4 TAGCAGCACATAATG Solute Carrier Family 6 (neurotransmitter transporter, A A
GTTTGAA serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM7530 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM7530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7530 is therefore inhibition of SLC6A4, a GAM7530 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM7542 CAV1 AGTTATGTGATGCTT TGAAGCA Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM7542 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7542 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7542 is therefore inhibition of CAV1, a GAM7542 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7546 PSEN1 TGATGCTTGAGCACA PSEN1 (Accession NM_007318.1) is a GAM7546 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7546 RNA are set forth in Tables 6 and 7, hereby incorporated herein. PSEN1 A A GTACCTC

A function of GAM7546 is therefore inhibition of PSEN1. Accordingly, utilities of GAM7546 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM7553 ACT TAGGTAGTTTCCTGT TGTTGGG Activator of CAMP- responsive Element Modulator (CR (ACT, Accession NM_020482.3) is a GAM7553 target gene. ACT BINDING SITE1 A A

and ACT BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ACT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE1 and ACT BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7553 is therefore inhibition of ACT, a GAM7553 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM7553 ADAMTS5 TAGGTAGTTTCCTGT A Disintegrin- like and Metalloprotease (reprolysin type) with A A TGTTGGG Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM7553 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7553 is therefore inhibition of ADAMTS5, a GAM7553 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7553 BACE TAGGTAGTTTCCTGT Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A TGTTGGG is another GAM7553 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7553 is therefore inhibition of BACE, a GAM7553 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7553 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7553 CAV1 TAGGTAGTTTCCTGT TGTTGGG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM7553 target gene. CAV1 BINDING SITE1 and CAV1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CAV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE1 and CAV1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7553 is therefore inhibition of CAV1, a GAM7553 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7553 IL1A TAGGTAGTTTCCTGT TGTTGGG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM7553 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7553 is therefore inhibition of IL1A, a GAM7553 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7553 PRND TAGGTAGTTTCCTGT TGTTGGG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM7553 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. A A

Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7553 is therefore inhibition of PRND, a GAM7553 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7553 TNFRSF6 TAGGTAGTTTCCTGT TNFRSF6 (Accession NM_152875.1) is another GAM7553 target gene. A A

TGTTGGG TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7553 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM7553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM7559 APBB1 TCTGCCTCCCTGTCT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CACTCTC 1 (Fe65) (APBB1, Accession NM_001164.2) is a GAM7559 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7559 is therefore inhibition of APBB1, a GAM7559 target gene which may modulate the internalization of beta-amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7559 APP TCTGCCTCCCTGTCT APP (Accession NM_000484.1) is another GAM7559 target gene. APP A A

CACTCTC BINDING SITE1 and APP BINDING SITE2 are target binding sites found

in untranslated regions of mRNA encoded by APP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE1 and APP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of APP. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM7559 CAV1 TCTGCCTCCCTGTCT CACTCTC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM7559 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7559 is therefore inhibition of CAV1, a GAM7559 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7559 HD TCTGCCTCCCTGTCT CACTCTC HD (Accession NM_002111.3) is another GAM7559 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7559 is therefore inhibition of HD. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7559 HTR2C TCTGCCTCCCTGTCT CACTCTC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM7559 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING A A

SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of HTR2C, a GAM7559 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7559	LRP1	TCTGCCTCCCTGTCT CACTCTC	Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM7559 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.	A	A

Another function of GAM7559 is therefore inhibition of LRP1, a GAM7559 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM7559	MAPT	TCTGCCTCCCTGTCT CACTCTC	Microtubule- associated Protein Tau (MAPT, Accession NM_016834.1) is another GAM7559 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.	A	A

Another function of GAM7559 is therefore inhibition of MAPT, a GAM7559 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM144.

GAM7559 NOTCH1 TCTGCCTCCCTGTCT Notch (Drosophila) Homolog 1 (translocation- associated) A A

CACTCTC (NOTCH1, Accession NM_017617.2) is another GAM7559 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of NOTCH1, a GAM7559 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7559 PSEN2 TCTGCCTCCCTGTCT PSEN2 (Accession NM_000447.1) is another GAM7559 target gene. A A

CACTCTC PSEN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of PSEN2. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM7559 RAGE TCTGCCTCCCTGTCT Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A

CACTCTC GAM7559 target gene. RAGE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of RAGE, a GAM7559 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM7559 S100B TCTGCCTCCCTGTCT CACTCTC A A S100 Calcium- binding Protein, Beta (neural) (S100B, Accession NM_006272.1) is another GAM7559 target gene. S100B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of S100B, a GAM7559 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM7559 TFCP2 TCTGCCTCCCTGTCT CACTCTC A A Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM7559 target gene. TFCP2 BINDING SITE1 and TFCP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TFCP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE1 and TFCP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of TFCP2, a GAM7559 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM7559 TNFRSF5 TCTGCCTCCCTGTCT CACTCTC A A TNFRSF5 (Accession NM_001250.3) is another GAM7559 target gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7559 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7559 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM7559 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM7591 ADAMTS5 TTGGAGTAATTCAGT A Disintegrin- like and Metalloprotease (reprolysin type) with A A
ATAGGTT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM7591 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7591 is therefore inhibition of ADAMTS5, a GAM7591 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7591 CAV1 TTGGAGTAATTCAGT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
ATAGGTT NM_001753.3) is another GAM7591 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7591 is therefore inhibition of CAV1, a GAM7591 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7591 CTSK TTGGAGTAATTCAGT CTSK (Accession NM_000396.2) is another GAM7591 target gene. A A
ATAGGTT CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7591 is therefore inhibition of CTSK. Accordingly, utilities of GAM7591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM7591 IGF1 TTGGAGTAATTCAGT ATAGGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM7591 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7591 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7591 is therefore inhibition of IGF1, a GAM7591 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7591 PRND TTGGAGTAATTCAGT ATAGGTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM7591 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7591 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7591 is therefore inhibition of PRND, a GAM7591 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7592 CHAT TAGGTTGTGCGCTCC TTATGAG Choline Acetyltransferase (CHAT, Accession NM_020984.1) is a GAM7592 target gene. CHAT BINDING SITE1 and CHAT BINDING SITE2 are A A

target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CHAT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE1 and CHAT BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7592 is therefore inhibition of CHAT, a GAM7592 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM7592 OLR1 TAGGTTGTGCGCTCC TTATGAG Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A (OLR1, Accession NM_002543.1) is another GAM7592 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7592 is therefore inhibition of OLR1, a GAM7592 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7601 NOTCH1 TTAAAGTCACCATTT GTGGGTT Notch (Drosophila) Homolog 1 (translocation- associated) A A (NOTCH1, Accession NM_017617.2) is a GAM7601 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7601 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7601 is therefore inhibition of NOTCH1, a GAM7601 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7601 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1

and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7636 APPBP2 TATTACATTCATTTT GATGGTT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM7636 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7636 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7636 is therefore inhibition of APPBP2, a GAM7636 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7636 IL1A TATTACATTCATTTT GATGGTT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM7636 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7636 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7636 is therefore inhibition of IL1A, a GAM7636 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7654 MAPK10 GTTTGGCACTGAATC ATATACA Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138980.1) is a GAM7654 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7654 RNA are set forth in Tables 6 and 7, hereby incorporated A A

herein.

A function of GAM7654 is therefore inhibition of MAPK10, a GAM7654 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7654 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM7654 RAGE GTTTGGCACTGAATC Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A

ATATACA GAM7654 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7654 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7654 is therefore inhibition of RAGE, a GAM7654 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM7654 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM7663 ABCD1 TGTGCTGGTTGCCCC ABCD1 (Accession NM_000033.2) is a GAM7663 target gene. ABCD1 A A

CGAGGGG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7663 is therefore inhibition of ABCD1. Accordingly, utilities of GAM7663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM7663 BACE TGTGCTGGTTGCCCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

CGAGGGG is another GAM7663 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE

III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7663 is therefore inhibition of BACE, a GAM7663 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7663 CLU TGTGCTGGTTGCCCC CGAGGGG A A Clusterin (complement lysis inhibitor, SP- 40,40, sulfated glycoprotein (CLU, Accession NM_001831.1) is another GAM7663 target gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7663 is therefore inhibition of CLU, a GAM7663 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM7663 NPY TGTGCTGGTTGCCCC CGAGGGG A A Neuropeptide Y (NPY, Accession NM_000905.2) is another GAM7663 target gene. NPY BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NPY BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7663 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7663 is therefore inhibition of NPY, a GAM7663 target gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7663 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NPY.The function of NPY and its association with various diseases

and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM193.

GAM7700 IAPP TAGAGTTATATGATG TGCTAGT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a GAM7700 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7700 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7700 is therefore inhibition of IAPP, a GAM7700 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM7700 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7707 MME TGGGCACATACTGCA TCATTTA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is a GAM7707 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7707 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7707 is therefore inhibition of MME, a GAM7707 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7707 IL1B TAGAGCACCTGTTGT GTGTGCA Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another GAM7707 target gene. IL1B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7707 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM7707 is therefore inhibition of IL1B, a GAM7707 target gene which stimulates thymocyte

proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7707 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM7729 IL1A GTGCTTCCATTTCCC CATCTGT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is a target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein. GAM7729 A A

A function of GAM7729 is therefore inhibition of IL1A, a GAM7729 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM7729 MAPT GTGCTTCCATTTCCC CATCTGT Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM7729 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7729 is therefore inhibition of MAPT, a GAM7729 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM7729 PSEN1 GTGCTTCCATTTCCC CATCTGT PSEN1 (Accession NM_000021.2) is another GAM7729 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A A

PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7729 is therefore inhibition of PSEN1. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM7729 TNFSF5 GTGCTTCCATTTCCC TNFSF5 (Accession NM_000074.1) is another GAM7729 target gene. A A

CATCTGT TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7729 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM7729 BACE ACAGGAGCATGGAGA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) B A

GGCTA is another GAM7729 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7729 is therefore inhibition of BACE, a GAM7729 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7729 CLU ACAGGAGCATGGAGA Clusterin (complement lysis inhibitor, SP- 40,40, sulfated B A

GGCTA glycoprotein (CLU, Accession NM_001831.1) is another GAM7729 target gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE,

and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7729 is therefore inhibition of CLU, a GAM7729 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM7729 NCSTN ACAGGAGCATGGAGA NCSTN (Accession NM_015331.1) is another GAM7729 target gene. B A
GGCTA NCSTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7729 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7729 is therefore inhibition of NCSTN, a GAM7729 target gene which has a central role in presenilin-mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp- 1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7729 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7776 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM7776 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7776 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7776 is therefore inhibition of APPBP2, a GAM7776 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions,

has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7776 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM7776 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7776 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7776 is therefore inhibition of BACE2, a GAM7776 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7776 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM7776 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7776 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7776 is therefore inhibition of FHL2, a GAM7776 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7776 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM7776 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7776 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7776 is therefore inhibition of HD. Accordingly, utilities of GAM7776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7776 IGF1 CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM7776 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7776 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7776 is therefore inhibition of IGF1, a GAM7776 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7776 PRND CATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM7776 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM7776 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7776 is therefore inhibition of PRND, a GAM7776 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7776 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7777 FLNB GCCCTGTTGACCAGA ATTTGTT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is a GAM7777 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the A A

nucleotide sequence of GAM7777 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7777 is therefore inhibition of FLNB, a GAM7777 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7777 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM7784 BACE2 CTGTGAGCTATTTGT TTTGGTT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is a GAM7784 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7784 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7784 is therefore inhibition of BACE2, a GAM7784 target gene which cleaves intracellularly the b- secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7784 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7784 CNTF CTGTGAGCTATTTGT TTTGGTT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM7784 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7784 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7784 is therefore inhibition of CNTF, a GAM7784 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7784 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM7784 HTR2C CTGTGAGCTATTTGT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
TTTGGTT NM_000868.1) is another GAM7784 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7784 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7784 is therefore inhibition of HTR2C, a GAM7784 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7784 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM7784 PRNP CTGTGAGCTATTTGT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A
TTTGGTT Strausler- (PRNP, Accession NM_000311.1) is another GAM7784 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7784 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7784 is therefore inhibition of PRNP, a GAM7784 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7784 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM7784 TFCP2 AATTTAACAGACAGC Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is B A
CACAGCC another GAM7784 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7784 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7784 is therefore inhibition of TFCP2, a GAM7784 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7784 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM7817 ACE TCACCCAGGCTGGAG TGCAGTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM7817 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7817 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7817 is therefore inhibition of ACE, a GAM7817 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7817 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7817 ADAM17 TCACCCAGGCTGGAG TGCAGTG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_003183.3) is another GAM7817 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7817 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7817 is therefore inhibition of ADAM17, a GAM7817 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7817 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM7817 FLNB TCACCCAGGCTGGAG TGCAGTG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM7817 target gene. FLNB BINDING SITE is a A A

target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7817 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7817 is therefore inhibition of FLNB, a GAM7817 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7817 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM7817 IAPP TCACCCAGGCTGGAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A TGCAGTG another GAM7817 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7817 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7817 is therefore inhibition of IAPP, a GAM7817 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM7817 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM7817 NOTCH1 TCACCCAGGCTGGAG Notch (Drosophila) Homolog 1 (translocation- associated) A A TGCAGTG (NOTCH1, Accession NM_017617.2) is another GAM7817 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7817 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7817 is therefore inhibition of NOTCH1, a GAM7817 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7817 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7837 B2M AGAAGTGTAAATAAG TATGTAT Beta- 2- microglobulin (B2M, Accession NM_004048.1) is a GAM7837 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7837 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7837 is therefore inhibition of B2M, a GAM7837 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7837 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM7837 FLNB AGAAGTGTAAATAAG TATGTAT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM7837 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7837 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7837 is therefore inhibition of FLNB, a GAM7837 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7837 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM7845 ADAM10 TGAGGGCAGGTGTGA AAATGCT A Disintegrin and Metalloproteinase Domain 10 (ADAM10, Accession NM_001110.1) is a GAM7845 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7845 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7845 is therefore inhibition of ADAM10, a GAM7845 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM7845 APBB2 TGAGGGCAGGTGTGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

AAATGCT 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM7845 target gene. APBB2 BINDING SITE1 and APBB2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APBB2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE1 and APBB2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7845 is therefore inhibition of APBB2, a GAM7845 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7845 FPRL1 TGAGGGCAGGTGTGA FPRL1 (Accession NM_001462.1) is another GAM7845 target gene. A A

AAATGCT FPRL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7845 is therefore inhibition of FPRL1. Accordingly, utilities of GAM7845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM7845 IGF1 TGAGGGCAGGTGTGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AAATGCT NM_000618.2) is another GAM7845 target gene. IGF1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7845 is therefore inhibition of IGF1, a GAM7845 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7845 MAPK10 TGAGGGCAGGTGTGA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A
AAATGCT NM_138981.1) is another GAM7845 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7845 is therefore inhibition of MAPK10, a GAM7845 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM7845 SNCA TGAGGGCAGGTGTGA SNCA (Accession NM_007308.1) is another GAM7845 target gene. A A
AAATGCT SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7845 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7845 is therefore inhibition of SNCA. Accordingly, utilities of GAM7845 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM7854 APLP2 ATACAGCTCTCTCTG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

GGGACTT NM_001642.1) is a GAM7854 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7854 is therefore inhibition of APLP2, a GAM7854 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM7854 IGF1 ATACAGCTCTCTCTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGACTT NM_000618.2) is another GAM7854 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of IGF1, a GAM7854 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7854 ACE CTGTGCCCAGCCAGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 B A
GCTGTGT (ACE, Accession NM_152831.1) is another GAM7854 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of ACE, a GAM7854 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7854 BACE2 CTGTGCCCAGCCAGG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession B A
GCTGTGT NM_138992.1) is another GAM7854 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of BACE2, a GAM7854 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM7854 HD CTGTGCCCAGCCAGG HD (Accession NM_002111.3) is another GAM7854 target gene. HD B A
GCTGTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of HD. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM7854 MPO CTGTGCCCAGCCAGG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM7854 B A
GCTGTGT target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of MPO, a GAM7854 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM7854 MTNR1A CTGTGCCCAGCCAGG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is B A

GCTGTGT another GAM7854 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of MTNR1A, a GAM7854 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM7854 NOTCH1 CTGTGCCCAGCCAGG Notch (Drosophila) Homolog 1 (translocation- associated) B A

GCTGTGT (NOTCH1, Accession NM_017617.2) is another GAM7854 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of NOTCH1, a GAM7854 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM7854 PRND CTGTGCCCAGCCAGG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is B A

GCTGTGT another GAM7854 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of PRND, a GAM7854 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7854 TNFRSF6 CTGTGCCCAGCCAGG TNFRSF6 (Accession NM_152877.1) is another GAM7854 target gene. B A

GCTGTGT TNFRSF6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7854 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7854 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM7854 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM7865 BACE TGGAGAGATAAGCCA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

AGTATCC is a GAM7865 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7865 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7865 is therefore inhibition of BACE, a GAM7865 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7865 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7865 CTSK TGGAGAGATAAGCCA CTSK (Accession NM_000396.2) is another GAM7865 target gene. A A

AGTATCC CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7865 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7865 is therefore inhibition of CTSK. Accordingly, utilities of GAM7865 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM7865 TNF TGGAGAGATAAGCCA Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

AGTATCC Accession NM_000594.2) is another GAM7865 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7865 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7865 is therefore inhibition of TNF, a GAM7865 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM7865 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7884 CTSB TTTGCACTGTAATAC CTSB (Accession NM_147783.1) is a GAM7884 target gene. CTSB A A

CTCGGTC BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7884 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7884 is therefore inhibition of CTSB. Accordingly, utilities of GAM7884 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM7889 OGDH TCTTAGATTGAGAAG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A

ATGTGGC NM_002541.1) is a GAM7889 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7889 RNA are set forth in Tables 6 and 7,

hereby incorporated herein.

A function of GAM7889 is therefore inhibition of OGDH, a GAM7889 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7889 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM7898 ACHE TTTGTAATAGCAAAA TACTGGA Acetylcholinesterase (YT blood group) (ACHE, Accession NM_015831.1) is a GAM7898 target gene. ACHE BINDING SITE1 and ACHE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ACHE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE1 and ACHE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7898 is therefore inhibition of ACHE, a GAM7898 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM7898 ADAMTS5 TTTGTAATAGCAAAA TACTGGA A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM7898 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7898 is therefore inhibition of ADAMTS5, a GAM7898 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7898 BACE TTTGTAATAGCAAAA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

TACTGGA is another GAM7898 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7898 is therefore inhibition of BACE, a GAM7898 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM7898 CAV1 TTTGTAATAGCAAAA Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
TACTGGA NM_001753.3) is another GAM7898 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7898 is therefore inhibition of CAV1, a GAM7898 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7898 GLUL TTTGTAATAGCAAAA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
TACTGGA NM_002065.3) is another GAM7898 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7898 is therefore inhibition of GLUL, a GAM7898 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM7898 MME TTTGTAATAGCAAAA TACTGGA A A Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is another GAM7898 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7898 is therefore inhibition of MME, a GAM7898 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7898 NCSTN TTTGTAATAGCAAAA TACTGGA A A NCSTN (Accession NM_015331.1) is another GAM7898 target gene. NCSTN BINDING SITE1 and NCSTN BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCSTN, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE1 and NCSTN BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7898 is therefore inhibition of NCSTN, a GAM7898 target gene which has a central role in presenilin-mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp- 1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7898 OLR1 TTTGTAATAGCAAAA TACTGGA A A Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM7898 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM7898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7898 is therefore inhibition of OLR1, a GAM7898 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7902 ABCD1 TCCCTGAGACTCTTT ABCD1 (Accession NM_000033.2) is a GAM7902 target gene. ABCD1 A A

AACTTCT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7902 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7902 is therefore inhibition of ABCD1. Accordingly, utilities of GAM7902 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM7911 PSEN2 TTCCTTCAGCCCTAG PSEN2 (Accession NM_012486.1) is a GAM7911 target gene. PSEN2 A A

CTGCTTT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7911 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7911 is therefore inhibition of PSEN2. Accordingly, utilities of GAM7911 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM7915 APLP2 AGACTGTTCCGTCAG Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

ACTCAGT NM_001642.1) is a GAM7915 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7915 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7915 is therefore inhibition of APLP2, a

GAM7915 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7915 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM7915 ADAMTS5 AATGTGTGGGAGAAC AGTCTTT A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM7915 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7915 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM7915 is therefore inhibition of ADAMTS5, a GAM7915 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7915 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM7933 ACE TAGCAGCACATAATG GTTTGAA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM7933 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7933 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7933 is therefore inhibition of ACE, a GAM7933 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7933 ADAM10 TAGCAGCACATAATG GTTTGAA A Disintegrin and Metalloproteinase Domain 10 (ADAM10, Accession NM_001110.1) is another GAM7933 target gene. ADAM10 BINDING SITE1 and ADAM10 BINDING SITE2 are target binding sites A A

found in untranslated regions of mRNA encoded by ADAM10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE1 and ADAM10 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7933 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7933 is therefore inhibition of ADAM10, a GAM7933 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM7933 HTR2A TAGCAGCACATAATG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
GTTTGAA NM_000621.1) is another GAM7933 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7933 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7933 is therefore inhibition of HTR2A, a GAM7933 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM7933 MME TAGCAGCACATAATG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GTTTGAA enkephalinase, (MME, Accession NM_000902.2) is another GAM7933 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7933 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7933 is therefore inhibition of MME, a GAM7933 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Alzheimer,

and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM7933 SLC6A4 TAGCAGCACATAATG GTTTGAA Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM7933 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7933 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7933 is therefore inhibition of SLC6A4, a GAM7933 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM7954 DHCR24 TTCACCCATCTTTCC ACCCACG 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM7954 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7954 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7954 is therefore inhibition of DHCR24, a GAM7954 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM7954 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM7954 PSEN1 TTCACCCATCTTTCC ACCCACG PSEN1 (Accession NM_007318.1) is another GAM7954 target gene. PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PSEN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2, A A

and secondary structure complementarity to the nucleotide sequence of GAM7954 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7954 is therefore inhibition of PSEN1. Accordingly, utilities of GAM7954 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM7954 UBB TTCACCCATCTTTCC ACCCACG Ubiquitin B (UBB, Accession NM_018955.2) is another GAM7954 target gene. UBB BINDING SITE1 and UBB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by UBB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE1 and UBB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM7954 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM7954 is therefore inhibition of UBB, a GAM7954 target gene which marks cellular proteins for degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM7954 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM7966 CAV1 TGTTAACATTTTGGC TAGATAG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM7966 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7966 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM7966 is therefore inhibition of CAV1, a GAM7966 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM7966 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM7966 UBB TGTTAACATTTTGGC TAGATAG Ubiquitin B (UBB, Accession NM_018955.2) is another GAM7966 target gene. UBB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or A A

BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7966 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM7966 is therefore inhibition of UBB, a GAM7966 target gene which marks cellular proteins for degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM7966 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM7980 TRPM2 CCTGGCTTAGGAAGC TRPM2 (Accession NM_003307.1) is a GAM7980 target gene. TRPM2 A A TCACAAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM7980 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM7980 is therefore inhibition of TRPM2, a GAM7980 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM7980 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM8013 ACE TTGCCCAGGCTGGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A TGCAGTG (ACE, Accession NM_152831.1) is a GAM8013 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8013 is therefore inhibition of ACE, a GAM8013 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8013 ADAM17 TTGCCCAGGCTGGAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

TGCAGTG factor, (ADAM17, Accession NM_003183.3) is another GAM8013 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of ADAM17, a GAM8013 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM8013 CHAT TTGCCCAGGCTGGAG A A
TGCAGTG Choline Acetyltransferase (CHAT, Accession NM_020984.1) is another GAM8013 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of CHAT, a GAM8013 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM8013 FLNB TTGCCCAGGCTGGAG A A
TGCAGTG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM8013 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of FLNB, a GAM8013 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM8013 A HTR2A TGCAGTG A TTGCCCAGGCTGGAG A 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM8013 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of HTR2A, a GAM8013 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM8013 A IAPP TGCAGTG A TTGCCCAGGCTGGAG A Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM8013 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of IAPP, a GAM8013 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM8013 A NOTCH1 TGCAGTG A TTGCCCAGGCTGGAG A Notch (Drosophila) Homolog 1 (translocation- associated) (NOTCH1, Accession NM_017617.2) is another GAM8013 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of NOTCH1, a GAM8013 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM8013 TGFB1 TTGCCCAGGCTGGAG TGFB1 (Accession NM_000660.1) is another GAM8013 target gene. A A

TGCAGTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of TGFB1. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM8013 IAPP CACTGCAACCTCTGC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is B A

CACCTGG another GAM8013 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of IAPP, a GAM8013 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM8013 MTNR1A CACTGCAACCTCTGC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is B A

CACCTGG another GAM8013 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8013 is therefore inhibition of MTNR1A, a GAM8013 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM8013 A | OGDH | CACTGCAACCTCTGC CACCTGG | Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM8013 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8013 RNA are set forth in Tables 6 and 7, hereby incorporated herein. | B

Another function of GAM8013 is therefore inhibition of OGDH, a GAM8013 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM8026 A A | APP | CAGCAGAGCCCATGT GTTCATG | APP (Accession NM_000484.1) is a GAM8026 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8026 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8026 is therefore inhibition of APP. Accordingly, utilities of GAM8026 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM8026 A | MAPK10 | AACGATGGGCTGGAT TGTTTTG | Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138980.1) is another GAM8026 target gene. MAPK10 BINDING SITE is | B

a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8026 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8026 is therefore inhibition of MAPK10, a GAM8026 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8026 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM8031 MME ATATTGTGTATTCAG GATAGCA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007289.1) is a GAM8031 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8031 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8031 is therefore inhibition of MME, a GAM8031 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8031 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8047 ADAM17 ATCACAGAGGCTTAA GTGCTGA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is a GAM8047 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8047 is therefore inhibition of ADAM17, a GAM8047 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM8047 GFAP ATCACAGAGGCTTAA GFAP (Accession NM_002055.2) is another GAM8047 target gene. A A

GTGCTGA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8047 is therefore inhibition of GFAP. Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM8047 MME ATCACAGAGGCTTAA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GTGCTGA enkephalinase, (MME, Accession NM_007288.1) is another GAM8047 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8047 is therefore inhibition of MME, a GAM8047 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8047 MTNR1A ATCACAGAGGCTTAA Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

GTGCTGA another GAM8047 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8047 is therefore inhibition of MTNR1A, a GAM8047 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM8047 NCKAP1 ATCACAGAGGCTTAA NCKAP1 (Accession NM_013436.2) is another GAM8047 target gene. A A

GTGCTGA NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8047 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM8047 PSEN1 ATCACAGAGGCTTAA PSEN1 (Accession NM_007318.1) is another GAM8047 target gene. A A

GTGCTGA PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8047 is therefore inhibition of PSEN1. Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM8047 RAGE ATCACAGAGGCTTAA Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A

GTGCTGA GAM8047 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8047 is therefore inhibition of RAGE, a GAM8047 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is

associated with Alzheimer. Accordingly, utilities of GAM8047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM8100 CAV2 CTGCAGATTTTGGGG A A TCCACAG Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM8100 target gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8100 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8100 is therefore inhibition of CAV2, a GAM8100 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8100 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM8109 ADAMTS5 TCCAGTACAGGTCTC A A TCATTTC A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM8109 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8109 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8109 is therefore inhibition of ADAMTS5, a GAM8109 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8109 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM8109 TFCP2 TCCAGTACAGGTCTC A A TCATTTC Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM8109 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8109 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8109 is therefore inhibition of TFCP2, a GAM8109 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8109 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM8109 TNFRSF5 TCCAGTACAGGTCTC TNFRSF5 (Accession NM_152854.1) is another GAM8109 target gene. A A
TCATTTC TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8109 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8109 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM8109 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM8145 BLMH ACATGATCTCCTCAC Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is a GAM8145 A A
TCTAGGA target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8145 is therefore inhibition of BLMH, a GAM8145 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM8145 GSK3B ACATGATCTCCTCAC Glycogen Synthase Kinase 3 Beta (GSK3B, Accession NM_002093.2) A A
TCTAGGA is another GAM8145 target gene. GSK3B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

GSK3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GSK3B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8145 is therefore inhibition of GSK3B, a GAM8145 target gene which b subunit of glycogen synthase kinase 3 which phosphorylates regulatory proteins. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GSK3B.The function of GSK3B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2027.

GAM8145 MAPT ACATGATCTCCTCAC TCTAGGA A A Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM8145 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8145 is therefore inhibition of MAPT, a GAM8145 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM8145 PSEN2 ACATGATCTCCTCAC TCTAGGA A A PSEN2 (Accession NM_012486.1) is another GAM8145 target gene. PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8145 is therefore inhibition of PSEN2. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM8164 ABCD1 GCTTCTCCTGTCCCC ABCD1 A A ABCD1 (Accession NM_000033.2) is a GAM8164 target gene.

TCCCTAC BINDING SITE1 and ABCD1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ABCD1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE1 and ABCD1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8164 is therefore inhibition of ABCD1. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM8164 APBB1 GCTTCTCCTGTCCCC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TCCCTAC 1 (Fe65) (APBB1, Accession NM_001164.2) is another GAM8164 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of APBB1, a GAM8164 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM8164 AVP GCTTCTCCTGTCCCC AVP (Accession NM_000490.2) is another GAM8164 target gene. AVP A A

TCCCTAC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of AVP. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM8164 BLMH GCTTCTCCTGTCCCC Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is another A A

TCCCTAC GAM8164 target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of BLMH, a GAM8164 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM8164 DHCR24 GCTTCTCCTGTCCCC 24- dehydrocholesterol Reductase (DHCR24, Accession A A
TCCCTAC NM_014762.1) is another GAM8164 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of DHCR24, a GAM8164 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8164 GLUL GCTTCTCCTGTCCCC Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
TCCCTAC NM_002065.3) is another GAM8164 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of GLUL, a GAM8164 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM8164 LRP1 GCTTCTCCTGTCCCC Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
TCCCTAC macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM8164 target gene. LRP1 BINDING SITE1 and LRP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LRP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE1 and LRP1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of LRP1, a GAM8164 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM8164 NCKAP1 GCTTCTCCTGTCCCC NCKAP1 (Accession NM_013436.2) is another GAM8164 target gene. A A
TCCCTAC NCKAP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM8164 NGB GCTTCTCCTGTCCCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM8164 A A
TCCCTAC target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8164 is therefore inhibition of NGB, a GAM8164 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM8164 OGDH GCTTCTCCTGTCCCC TCCCTAC Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM8164 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8164 is therefore inhibition of OGDH, a GAM8164 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM8164 PIN1 GCTTCTCCTGTCCCC TCCCTAC Protein (peptidyl- prolyl cis/trans isomerase) NIMA-interacting 1 (PIN1, Accession NM_006221.1) is another GAM8164 target gene. PIN1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PIN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PIN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8164 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8164 is therefore inhibition of PIN1, a GAM8164 target gene which intervenes in cell cycle regulation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PIN1.The function of PIN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM8206 APPBP2 TTGCACTCCAGCCTG GGTAACA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM8206 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8206 RNA are set forth in Tables 6 and 7, hereby A A

incorporated herein.

A function of GAM8206 is therefore inhibition of APPBP2, a GAM8206 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8206 FHL2 TTGCACTCCAGCCTG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGTAACA another GAM8206 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8206 is therefore inhibition of FHL2, a GAM8206 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM8206 IGF1 TTGCACTCCAGCCTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGTAACA NM_000618.2) is another GAM8206 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8206 is therefore inhibition of IGF1, a GAM8206 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8206 PRND TTGCACTCCAGCCTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGTAACA another GAM8206 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM8206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8206 is therefore inhibition of PRND, a GAM8206 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8276 FHL2 ACTGTACTCCACCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCGAC a GAM8276 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8276 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8276 is therefore inhibition of FHL2, a GAM8276 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8276 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM8276 HD ACTGTACTCCACCCT HD (Accession NM_002111.3) is another GAM8276 target gene. HD A A

GGGCGAC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8276 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8276 is therefore inhibition of HD. Accordingly, utilities of GAM8276 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM8285 IGF1 AGTAGACAGTGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CATAGTC NM_000618.2) is a GAM8285 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8285 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8285 is therefore inhibition of IGF1, a GAM8285 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8285 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8285 MME AGTAGACAGTGGCAA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

CATAGTC enkephalinase, (MME, Accession NM_000902.2) is another GAM8285 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8285 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8285 is therefore inhibition of MME, a GAM8285 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8285 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8288 HTR2A GTGCTCATCTTCTGT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

AACTGTT NM_000621.1) is a GAM8288 target gene. HTR2A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8288 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8288 is therefore inhibition of HTR2A, a GAM8288 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8288 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM8311 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A TGGGTGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM8311 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8311 is therefore inhibition of APPBP2, a GAM8311 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8311 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147783.1) is another GAM8311 target gene. A A TGGGTGA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8311 is therefore inhibition of CTSB. Accordingly, utilities of GAM8311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM8311 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM8311 target gene. A A TGGGTGA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8311 is therefore inhibition of

CTSK. Accordingly, utilities of GAM8311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM8311 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGTGA another GAM8311 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8311 is therefore inhibition of FHL2, a GAM8311 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM8311 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGTGA NM_000618.2) is another GAM8311 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8311 is therefore inhibition of IGF1, a GAM8311 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8311 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGTGA another GAM8311 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM8311 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM8311 is therefore inhibition of PRND, a GAM8311 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8339 ACE TGGAGCCTTGTTGTT TGTTCAC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM8339 target gene. ACE BINDING SITE1 and ACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE1 and ACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8339 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8339 is therefore inhibition of ACE, a GAM8339 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM8339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8339 ADAMTS5 TGGAGCCTTGTTGTT TGTTCAC A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is another GAM8339 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8339 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8339 is therefore inhibition of ADAMTS5, a GAM8339 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM8339 CTNND2 TGGAGCCTTGTTGTT TGTTCAC Catenin (cadherin- associated protein), Delta 2 (neural plakophilin- rel (CTNND2, Accession NM_001332.1) is another GAM8339 A A

target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8339 is therefore inhibition of CTNND2, a GAM8339 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM8339 PRND TGGAGCCTTGTTGTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM8339 target gene. PRND BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8339 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

TGTTCAC

Another function of GAM8339 is therefore inhibition of PRND, a GAM8339 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8339 TNFRSF6 TGGAGCCTTGTTGTT TNFRSF6 (Accession NM_152871.1) is another GAM8339 target gene. A A

TGTTCAC TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8339 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8339 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM8339 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM8349 ADAM17 ATCACAGAGGCTTAA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

GTGCTGA factor, (ADAM17, Accession NM_021832.1) is a GAM8349 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8349 is therefore inhibition of ADAM17, a GAM8349 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM8349 GFAP ATCACAGAGGCTTAA GFAP (Accession NM_002055.2) is another GAM8349 target gene. A A

GTGCTGA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8349 is therefore inhibition of GFAP. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM8349 MME ATCACAGAGGCTTAA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GTGCTGA enkephalinase, (MME, Accession NM_007288.1) is another GAM8349 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8349 is therefore inhibition of MME, a GAM8349 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies,

as described hereinabove with reference to GAM25.

GAM8349 MTNR1A ATCACAGAGGCTTAA Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM8349 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A A

GTGCTGA

Another function of GAM8349 is therefore inhibition of MTNR1A, a GAM8349 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM8349 NCKAP1 ATCACAGAGGCTTAA NCKAP1 (Accession NM_013436.2) is another GAM8349 target gene. A A

GTGCTGA NCKAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8349 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM8349 PSEN1 ATCACAGAGGCTTAA PSEN1 (Accession NM_007318.1) is another GAM8349 target gene. A A

GTGCTGA PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8349 is therefore inhibition of PSEN1. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM8349 RAGE ATCACAGAGGCTTAA Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A

GTGCTGA GAM8349 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8349 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8349 is therefore inhibition of RAGE, a GAM8349 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM8349 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM8362 HTR2A ACAGCAAGTCTTTGT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

CAAAGCT NM_000621.1) is a GAM8362 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8362 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8362 is therefore inhibition of HTR2A, a GAM8362 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8362 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM8362 VLDLR ACAGCAAGTCTTTGT Very Low Density Lipoprotein Receptor (VLDLR, Accession A A

CAAAGCT NM_003383.1) is another GAM8362 target gene. VLDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VLDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of VLDLR BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8362 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8362 is therefore inhibition of VLDLR, a GAM8362 target gene which may play a crucial role in triglyceride metabolism and therefore is associated with Alzheimer. Accordingly, utilities of GAM8362 include diagnosis, prevention and

treatment of Alzheimer, and of other diseases and clinical conditions associated with VLDLR.The function of VLDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM8380 APBB2 GGAGGTGACTGTTAC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

AGATCGG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM8380 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8380 is therefore inhibition of APBB2, a GAM8380 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8380 HTR2A CTGATTGAACCATTC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession B A

ACTTTAT NM_000621.1) is another GAM8380 target gene. HTR2A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8380 is therefore inhibition of HTR2A, a GAM8380 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM8386 ABCD1 CTTTTTGGGGTTTGG ABCD1 (Accession NM_000033.2) is a GAM8386 target gene.
ABCD1 A A

GGCTTGG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM8386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8386 is therefore inhibition of ABCD1. Accordingly, utilities of GAM8386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM8386 LRP1 CTTTTTGGGGTTTGG GGCTTGG Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM8386 target gene. LRP1 BINDING SITE1 through LRP1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LRP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE1 through LRP1 BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM8386 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8386 is therefore inhibition of LRP1, a GAM8386 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM8396 AVP TTCAGAGTGGTTAAG ATCATGG AVP (Accession NM_000490.2) is a GAM8396 target gene. AVP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8396 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8396 is therefore inhibition of AVP. Accordingly, utilities of GAM8396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM8396 CNTF TTCAGAGTGGTTAAG ATCATGG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM8396 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8396 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8396 is therefore inhibition of CNTF, a GAM8396 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM8396 GYPA TTCAGAGTGGTTAAG Glycophorin A (includes MN blood group) (GYPA, Accession A A ATCATGG NM_002099.2) is another GAM8396 target gene. GYPA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8396 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8396 is therefore inhibition of GYPA, a GAM8396 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM8396 TGFB1 TTCAGAGTGGTTAAG TGFB1 (Accession NM_000660.1) is another GAM8396 target gene. A A ATCATGG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8396 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8396 is therefore inhibition of TGFB1. Accordingly, utilities of GAM8396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM8439 DHCR24 GGGCCATGACAGGGA 24- dehydrocholesterol Reductase (DHCR24, Accession A A GATAGGC NM_014762.1) is a GAM8439 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8439 is therefore inhibition of DHCR24, a GAM8439 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8439 MPO GGGCCATGACAGGGA Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM8439 A A
GATAGGC target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8439 is therefore inhibition of MPO, a GAM8439 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM8439 PSEN2 GGGCCATGACAGGGA PSEN2 (Accession NM_000447.1) is another GAM8439 target gene. A A
GATAGGC PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8439 is therefore inhibition of PSEN2. Accordingly, utilities of GAM8439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM8439 SNCB GGGCCATGACAGGGA Synuclein, Beta (SNCB, Accession NM_003085.2) is another A A
GATAGGC GAM8439 target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM8439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8439 is therefore inhibition of SNCB, a GAM8439 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM8439 TGFB1 GGGCCATGACAGGGA A A GATAGGC TGFB1 (Accession NM_000660.1) is another GAM8439 target gene. TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8439 is therefore inhibition of TGFB1. Accordingly, utilities of GAM8439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM8447 ACE CCCAGGAGGTGGAGG A A TTACAGT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM8447 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8447 is therefore inhibition of ACE, a GAM8447 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8447 IGF1 CCCAGGAGGTGGAGG A A TTACAGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM8447 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8447 is therefore inhibition of IGF1, a GAM8447 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8447 OGDH CCCAGGAGGTGGAGG A A TTACAGT Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM8447 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8447 is therefore inhibition of OGDH, a GAM8447 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM8447 PRND CCCAGGAGGTGGAGG A A TTACAGT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM8447 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8447 is therefore inhibition of PRND, a GAM8447 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8447 APPBP2 CGTGTAATCCCAGCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding B A
ACTTGGG Protein 2 (APPBP2, Accession NM_006380.2) is another GAM8447 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8447 is therefore inhibition of APPBP2, a GAM8447 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8447 FHL2 CGTGTAATCCCAGCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is B A
ACTTGGG another GAM8447 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8447 is therefore inhibition of FHL2, a GAM8447 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM8447 GFAP CGTGTAATCCCAGCT GFAP (Accession NM_002055.2) is another GAM8447 target gene. B A
ACTTGGG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8447 is therefore inhibition of GFAP. Accordingly, utilities of GAM8447 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM8447 IGF1 CGTGTAATCCCAGCT ACTTGGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM8447 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM8447 is therefore inhibition of IGF1, a GAM8447 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8447 PRND CGTGTAATCCCAGCT ACTTGGG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM8447 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM8447 is therefore inhibition of PRND, a GAM8447 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8447 TRPM2 CGTGTAATCCCAGCT ACTTGGG TRPM2 (Accession NM_003307.1) is another GAM8447 target gene. TRPM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8447 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM8447 is therefore inhibition of TRPM2, a GAM8447 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM8447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM8452 FLNB CCTCCTTTCATCAAA TTCGAGT Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is a GAM8452 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8452 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8452 is therefore inhibition of FLNB, a GAM8452 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8452 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM8452 PRND CCTCCTTTCATCAAA TTCGAGT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM8452 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8452 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8452 is therefore inhibition of PRND, a GAM8452 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8452 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8473 APBB2 GACCAGCCATCCTGG TTTACAT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM8473 target gene. APBB2 BINDING SITE1 and APBB2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APBB2, A A

corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE1 and APBB2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8473 is therefore inhibition of APBB2, a GAM8473 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8473 DSCR1 GACCAGCCATCCTGG A A TTTACAT Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is another GAM8473 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8473 is therefore inhibition of DSCR1, a GAM8473 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM8473 MAPT GACCAGCCATCCTGG A A TTTACAT Microtubule- associated Protein Tau (MAPT, Accession NM_016841.1) is another GAM8473 target gene. MAPT BINDING SITE1 and MAPT BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 and MAPT BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8473 is therefore inhibition of MAPT, a GAM8473 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM8473 MME GACCAGCCATCCTGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
TTTACAT enkephalinase, (MME, Accession NM_007289.1) is another GAM8473 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8473 is therefore inhibition of MME, a GAM8473 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8473 PRND GACCAGCCATCCTGG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TTTACAT another GAM8473 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8473 is therefore inhibition of PRND, a GAM8473 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8473 TNFRSF6 GACCAGCCATCCTGG TNFRSF6 (Accession NM_152872.1) is another GAM8473 target gene. A A
TTTACAT TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8473 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM8473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM8489 HD GTATGGAGATCTCTG HD (Accession NM_002111.3) is a GAM8489 target gene. HD BINDING A A
CCCTTGT SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8489 is therefore inhibition of HD. Accordingly, utilities of GAM8489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM8489 MAPT GTATGGAGATCTCTG Microtubule- associated Protein Tau (MAPT, Accession A A
CCCTTGT NM_173727.1) is another GAM8489 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8489 is therefore inhibition of MAPT, a GAM8489 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM8489 PLAU GTATGGAGATCTCTG Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A
CCCTTGT is another GAM8489 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8489 is therefore inhibition of PLAU, a GAM8489 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM8489 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM8489 GYPA ACAAGGCAGGGCAGG Glycophorin A (includes MN blood group) (GYPA, Accession B A
TGTCTGT NM_002099.2) is another GAM8489 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8489 is therefore inhibition of GYPA, a GAM8489 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM8506 IGF1 TGTCATATAGAATGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCTATGA NM_000618.2) is a GAM8506 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8506 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8506 is therefore inhibition of IGF1, a GAM8506 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8506 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8531 ADAM10 GGCAAGGAAGAAAGC A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A
AGAAGTT Accession NM_001110.1) is a GAM8531 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8531 is therefore inhibition of ADAM10, a GAM8531 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM8531 APCS GGCAAGGAAGAAAGC Amyloid P Component, Serum (APCS, Accession NM_001639.2) is A A

AGAAGTT another GAM8531 target gene. APCS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APCS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8531 is therefore inhibition of APCS, a GAM8531 target gene which can interact with dna and histones and may scavenge nuclear material released from damaged circulating cells. may also function as a calcium- dependent lectin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APCS.The function of APCS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM772.

GAM8531 CNTF GGCAAGGAAGAAAGC Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

AGAAGTT another GAM8531 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8531 is therefore inhibition of CNTF, a GAM8531 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM8531 FHL2 GGCAAGGAAGAAAGC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

AGAAGTT another GAM8531 target gene. FHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8531 is therefore inhibition of FHL2, a GAM8531 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM8531 HTR2A GGCAAGGAAGAAAGC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
AGAAGTT NM_000621.1) is another GAM8531 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8531 is therefore inhibition of HTR2A, a GAM8531 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM8531 MAPT GGCAAGGAAGAAAGC Microtubule- associated Protein Tau (MAPT, Accession A A
AGAAGTT NM_173727.1) is another GAM8531 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8531 is therefore inhibition of MAPT, a GAM8531 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8531 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM8539 ARHA TGGAGAGATAGTGAT Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

TTAGCTC is a GAM8539 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8539 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8539 is therefore inhibition of ARHA, a GAM8539 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8539 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM8539 PSEN2 TGGAGAGATAGTGAT PSEN2 (Accession NM_012486.1) is another GAM8539 target gene. A A

TTAGCTC PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8539 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8539 is therefore inhibition of PSEN2. Accordingly, utilities of GAM8539 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM8539 TGFB1 TGGAGAGATAGTGAT TGFB1 (Accession NM_000660.1) is another GAM8539 target gene. A A

TTAGCTC TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8539 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8539 is therefore inhibition of TGFB1. Accordingly, utilities of GAM8539 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM8542 APBA2 CTTTGGCAAGGGAGA Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
AGTCAC 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM8542 target gene. APBA2 BINDING SITE1 and APBA2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APBA2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE1 and APBA2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8542 is therefore inhibition of APBA2, a GAM8542 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM8542 CTSK CTTTGGCAAGGGAGA CTSK (Accession NM_000396.2) is another GAM8542 target gene. A A
AGTCAC CTSK BINDING SITE1 and CTSK BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CTSK, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE1 and CTSK BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8542 is therefore inhibition of CTSK. Accordingly, utilities of GAM8542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM8542 FLNB CTTTGGCAAGGGAGA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
AGTCAC NM_001457.1) is another GAM8542 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8542 is therefore inhibition of FLNB, a GAM8542 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8542 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM8542 OGDH CTTTGGCAAGGGAGA AGTCAC Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM8542 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8542 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM8542 is therefore inhibition of OGDH, a GAM8542 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM8563 ACE TTTGAAGTGGGTCCT CGAAATG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM8563 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8563 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8563 is therefore inhibition of ACE, a GAM8563 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM8563 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8563 GFAP TTTGAAGTGGGTCCT CGAAATG GFAP (Accession NM_002055.2) is another GAM8563 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide A A

sequence of GAM8563 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8563 is therefore inhibition of GFAP. Accordingly, utilities of GAM8563 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM8598 BACE TCCAAAATTAAAGGT Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A
TGTAGAA is a GAM8598 target gene. BACE BINDING SITE1 through BACE BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 through BACE BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM8598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8598 is therefore inhibition of BACE, a GAM8598 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM8598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM8598 IGF1 TCCAAAATTAAAGGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGTAGAA NM_000618.2) is another GAM8598 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8598 is therefore inhibition of IGF1, a GAM8598 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8598 MME TCCAAAATTAAAGGT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
TGTAGAA enkephalinase, (MME, Accession NM_000902.2) is another GAM8598 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by

MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8598 is therefore inhibition of MME, a GAM8598 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8601 DHCR24 TGGAATGACAGAAGA TGAGAGC 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM8601 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8601 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8601 is therefore inhibition of DHCR24, a GAM8601 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8601 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8631 MME AGAAGATCCCTGCTC TGAGTCA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is a GAM8631 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8631 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM8631 is therefore inhibition of MME, a GAM8631 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8636 DSCR1 TGAGGTAGGTGCTGA Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A
AACTGCT NM_004414.3) is a GAM8636 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8636 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8636 is therefore inhibition of DSCR1, a GAM8636 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM8636 FLNB TGAGGTAGGTGCTGA Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A
AACTGCT NM_001457.1) is another GAM8636 target gene. FLNB BINDING SITE1 and FLNB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLNB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE1 and FLNB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8636 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8636 is therefore inhibition of FLNB, a GAM8636 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM8636 IAPP TGAGGTAGGTGCTGA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
AACTGCT another GAM8636 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8636 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8636 is therefore inhibition of IAPP, a GAM8636 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM8636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM8636 IGF1 TGAGGTAGGTGCTGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AACTGCT NM_000618.2) is another GAM8636 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8636 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8636 is therefore inhibition of IGF1, a GAM8636 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8636 NOTCH1 TGAGGTAGGTGCTGA Notch (Drosophila) Homolog 1 (translocation- associated) A A

AACTGCT (NOTCH1, Accession NM_017617.2) is another GAM8636 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8636 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8636 is therefore inhibition of NOTCH1, a GAM8636 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8636 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM8647 ADAMTS5 TGTGTCTGTGGAACA A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GAAGCAG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM8647 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8647 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8647 is therefore inhibition of ADAMTS5, a GAM8647 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8647 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM8647 MME TGTGTCTGTGGAACA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GAAGCAG enkephalinase, (MME, Accession NM_007289.1) is another GAM8647 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8647 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8647 is therefore inhibition of MME, a GAM8647 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8647 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8665 APLP2 AGGCAAGAGGTTGCA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession A A

GTGAGCT NM_001642.1) is a GAM8665 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8665 is therefore inhibition of APLP2, a GAM8665 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM8665 APP AGGCAAGAGGTTGCA APP (Accession NM_000484.1) is another GAM8665 target gene. APP A A

GTGAGCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of APP. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM8665 APPBP2 AGGCAAGAGGTTGCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GTGAGCT Protein 2 (APPBP2, Accession NM_006380.2) is another GAM8665 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of APPBP2, a GAM8665 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8665 CTSB AGGCAAGAGGTTGCA CTSB (Accession NM_147783.1) is another GAM8665 target gene. A A

GTGAGCT CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of CTSB. Accordingly, utilities of GAM8665 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM8665 DHCR24 AGGCAAGAGGTTGCA 24- dehydrocholesterol Reductase (DHCR24, Accession A A
GTGAGCT NM_014762.1) is another GAM8665 target gene. DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DHCR24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE1 and DHCR24 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of DHCR24, a GAM8665 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8665 FHL2 AGGCAAGAGGTTGCA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GTGAGCT another GAM8665 target gene. FHL2 BINDING SITE1 through FHL2 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 through FHL2 BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of FHL2, a GAM8665 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM8665 HTR2C AGGCAAGAGGTTGCA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
GTGAGCT NM_000868.1) is another GAM8665 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of HTR2C, a GAM8665 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM8665 IGF1 AGGCAAGAGGTTGCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GTGAGCT NM_000618.2) is another GAM8665 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of IGF1, a GAM8665 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM8665 PRND AGGCAAGAGGTTGCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GTGAGCT another GAM8665 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8665 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8665 is therefore inhibition of PRND, a GAM8665 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8665 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8678 CHAT GTGTTCCAGGAAGTC Choline Acetyltransferase (CHAT, Accession NM_020984.1) is a A A

GTCTTGA GAM8678 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8678 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8678 is therefore inhibition of CHAT, a GAM8678 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM8678 DHCR24 GTGTTCCAGGAAGTC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

GTCTTGA NM_014762.1) is another GAM8678 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8678 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8678 is therefore inhibition of DHCR24, a GAM8678 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM8678 DSCR1 GTGTTCCAGGAAGTC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

GTCTTGA NM_004414.3) is another GAM8678 target gene. DSCR1 BINDING SITE1 and DSCR1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DSCR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE1 and DSCR1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8678 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8678 is therefore inhibition of DSCR1, a GAM8678 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with

Alzheimer. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM8678 MAPK10 GTGTTCCAGGAAGTC GTCTTGA A A Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138980.1) is another GAM8678 target gene. MAPK10 BINDING SITE1 and MAPK10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPK10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE1 and MAPK10 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8678 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8678 is therefore inhibition of MAPK10, a GAM8678 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM8678 TNFRSF5 GTGTTCCAGGAAGTC GTCTTGA A A TNFRSF5 (Accession NM_152854.1) is another GAM8678 target gene. TNFRSF5 BINDING SITE1 and TNFRSF5 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE1 and TNFRSF5 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM8678 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8678 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM8678 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM8693 CAV1 CAGTGGGAAAAGTTT GTCTCAT A A Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM8693 target gene. CAV1 BINDING SITE1 and CAV1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CAV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE1 and CAV1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM8693 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM8693 is therefore inhibition of CAV1, a GAM8693 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM8693 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM8693 GYPA CAGTGGGAAAAGTTT Glycophorin A (includes MN blood group) (GYPA, Accession A A
GTCTCAT NM_002099.2) is another GAM8693 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8693 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8693 is therefore inhibition of GYPA, a GAM8693 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8693 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM8693 HD CAGTGGGAAAAGTTT HD (Accession NM_002111.3) is another GAM8693 target gene. HD A A
GTCTCAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8693 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8693 is therefore inhibition of HD. Accordingly, utilities of GAM8693 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM8693 MME CAGTGGGAAAAGTTT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GTCTCAT enkephalinase, (MME, Accession NM_007287.1) is another GAM8693 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM8693 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM8693 is therefore inhibition of MME, a GAM8693 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM8693 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336121 CHAT GTGTTCCAGGAAGTC A A GTCTTGA Choline Acetyltransferase (CHAT, Accession NM_020984.1) is a GAM336121 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336121 is therefore inhibition of CHAT, a GAM336121 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM336121 DHCR24 GTGTTCCAGGAAGTC A A GTCTTGA 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM336121 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336121 is therefore inhibition of DHCR24, a GAM336121 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM44.

GAM336121 DSCR1 GTGTTCCAGGAAGTC A A GTCTTGA Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is another GAM336121 target gene. DSCR1 BINDING SITE1 and DSCR1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DSCR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE1 and DSCR1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336121 is therefore inhibition of DSCR1, a GAM336121 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM336121 MAPK10 GTGTTCCAGGAAGTC A A GTCTTGA Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138980.1) is another GAM336121 target gene. MAPK10 BINDING SITE1 and MAPK10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPK10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE1 and MAPK10 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336121 is therefore inhibition of MAPK10, a GAM336121 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336121 TNFRSF5 GTGTTCCAGGAAGTC A A GTCTTGA TNFRSF5 (Accession NM_152854.1) is another GAM336121 target gene. TNFRSF5 BINDING SITE1 and TNFRSF5 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE1 and TNFRSF5

BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336121 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336121 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM336121 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM336122 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336122 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336122 is therefore inhibition of APPBP2, a GAM336122 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336122 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336122 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of BACE2, a GAM336122 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336122 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336122 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of BCHE. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336122 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336122 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of CTSB. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336122 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336122 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of CTSK. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336122 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336122 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336122 is therefore inhibition of FHL2, a GAM336122 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336122 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336122 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of HD. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336122 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336122 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of IGF1, a GAM336122 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336122 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336122 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of IL1A, a GAM336122 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336122 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336122 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of NGB, a GAM336122 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336122 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336122 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336122 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336122 is therefore inhibition of PRND, a GAM336122 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336122 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336123 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336123 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336123 is therefore inhibition of APPBP2, a GAM336123 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336123 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336123 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of BACE2, a GAM336123 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336123 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336123 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of BCHE. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336123 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336123 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of CTSB. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336123 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336123 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of CTSK. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336123 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336123 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of FHL2, a GAM336123 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336123 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336123 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of HD. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336123 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336123 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of IGF1, a GAM336123 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336123 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336123 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of IL1A, a GAM336123 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336123 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336123 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of NGB, a GAM336123 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336123 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336123 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336123 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336123 is therefore inhibition of PRND, a GAM336123 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336123 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336124 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336124 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336124 is therefore inhibition of APPBP2, a GAM336124 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336124 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336124 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of BACE2, a GAM336124 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336124 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336124 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of BCHE. Accordingly, utilities of GAM336124 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336124 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336124 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of CTSB. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336124 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336124 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of CTSK. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336124 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336124 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of FHL2, a GAM336124 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336124 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336124 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of HD. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336124 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM336124 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of IGF1, a GAM336124 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336124 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A

TGGGCAA GAM336124 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of IL1A, a GAM336124 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336124 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336124 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of NGB, a GAM336124 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336124 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336124 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336124 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336124 is therefore inhibition of PRND, a GAM336124 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336124 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336125 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336125 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336125 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336125 is therefore inhibition of APPBP2, a GAM336125 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336125 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336125 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336125 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336125 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336125 is therefore inhibition of BACE2, a GAM336125 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336125 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336125 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336125 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336125 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336125 is therefore inhibition of FHL2, a GAM336125 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336125 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336125 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336125 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336125 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336125 is therefore inhibition of IGF1, a GAM336125 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336125 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336125 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM336125 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336125 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336125 is therefore inhibition of MME, a GAM336125 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336125 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336125 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336125 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING A A

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336125 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336125 is therefore inhibition of PRND, a GAM336125 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336125 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336126 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336126 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336126 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336126 is therefore inhibition of APPBP2, a GAM336126 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336126 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336126 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336126 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336126 is therefore inhibition of BACE2, a GAM336126 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336126 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336126 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336126 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336126 is therefore inhibition of FHL2, a GAM336126 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336126 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336126 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336126 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336126 is therefore inhibition of HD. Accordingly, utilities of GAM336126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336126 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336126 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336126 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336126 is therefore inhibition of IGF1, a GAM336126 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336126 PRND CATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336126 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336126 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336126 is therefore inhibition of PRND, a GAM336126 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336127 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336127 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336127 is therefore inhibition of APPBP2, a GAM336127 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336127 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336127 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a A A

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of BACE2, a GAM336127 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336127 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336127 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of BCHE. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336127 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336127 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of CTSB. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336127 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336127 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of CTSK. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336127 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336127 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of FHL2, a GAM336127 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336127 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336127 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of HD. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336127 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336127 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of IGF1, a GAM336127 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336127 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336127 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of IL1A, a GAM336127 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336127 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336127 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of NGB, a GAM336127 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM281.

GAM336127 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336127 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336127 is therefore inhibition of PRND, a GAM336127 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336128 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336128 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336128 is therefore inhibition of APPBP2, a GAM336128 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336128 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336128 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of BACE2, a GAM336128 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336128 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336128 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of BCHE. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336128 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336128 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of CTSB. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336128 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336128 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of

CTSK. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336128 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336128 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of FHL2, a GAM336128 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336128 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336128 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of HD. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336128 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336128 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of IGF1, a GAM336128 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336128 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336128 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of IL1A, a GAM336128 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336128 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336128 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of NGB, a GAM336128 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336128 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336128 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336128 is therefore inhibition of PRND, a GAM336128 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336129 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336129 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336129 is therefore inhibition of APPBP2, a GAM336129 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336129 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336129 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336129 is therefore inhibition of BACE2, a GAM336129 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336129 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336129 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of BCHE. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336129 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336129 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of CTSB. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336129 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336129 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of CTSK. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336129 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336129 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of FHL2, a GAM336129 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336129 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336129 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of HD. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336129 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM336129 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of IGF1, a GAM336129 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM336129 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336129 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of IL1A, a GAM336129 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336129 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336129 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336129 is therefore inhibition of NGB, a GAM336129 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336129 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336129 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336129 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336129 is therefore inhibition of PRND, a GAM336129 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336130 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336130 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336130 is therefore inhibition of APPBP2, a GAM336130 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336130 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336130 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of BACE2, a GAM336130 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336130 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336130 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of BCHE. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336130 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336130 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of CTSB. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336130 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336130 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of CTSK. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336130 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336130 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of FHL2, a GAM336130 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336130 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336130 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of HD. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336130 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336130 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of IGF1, a GAM336130 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336130 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336130 target gene. IL1A BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of IL1A, a GAM336130 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336130 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336130 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of NGB, a GAM336130 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336130 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336130 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336130 is therefore inhibition of PRND, a GAM336130 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336131 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336131 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336131 is therefore inhibition of APPBP2, a GAM336131 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336131 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336131 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of BACE2, a GAM336131 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336131 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336131 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of BCHE. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336131 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336131 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of CTSB. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336131 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336131 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of CTSK. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336131 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336131 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of

FHL2, a GAM336131 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336131 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336131 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of HD. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336131 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336131 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of IGF1, a GAM336131 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336131 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336131 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of IL1A, a GAM336131 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336131 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336131 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of NGB, a GAM336131 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336131 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336131 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336131 is therefore inhibition of PRND, a GAM336131 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336132 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336132 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336132 is therefore inhibition of APPBP2, a GAM336132 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336132 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336132 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of BACE2, a GAM336132 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336132 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336132 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of BCHE. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336132 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336132 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of CTSB. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336132 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336132 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of CTSK. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336132 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336132 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of FHL2, a GAM336132 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336132 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336132 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of HD. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336132 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336132 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of IGF1, a GAM336132 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336132 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336132 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of IL1A, a GAM336132 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation &

proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336132 NGB CACTGCACTCCAGCC TGGGCAA A A Neuroglobin (NGB, Accession NM_021257.2) is another target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of NGB, a GAM336132 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336132 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336132 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336132 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336132 is therefore inhibition of PRND, a GAM336132 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336132 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336133 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336133 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336133 is therefore inhibition of APPBP2, a GAM336133 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336133 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336133 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of BACE2, a GAM336133 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336133 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336133 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of BCHE. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336133 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336133 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of CTSB. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336133 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336133 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of CTSK. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336133 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336133 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of FHL2, a GAM336133 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336133 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336133 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of HD. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336133 IGF1 CACTGCACTCCAGCC TGGGCAA A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336133 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of IGF1, a GAM336133 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336133 IL1A CACTGCACTCCAGCC TGGGCAA A A Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336133 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of IL1A, a GAM336133 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM281.

GAM336133 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336133 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336133 is therefore inhibition of NGB, a GAM336133 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336133 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336133 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336133 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

TGGGCAA

Another function of GAM336133 is therefore inhibition of PRND, a GAM336133 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336134 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336134 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

TGGGCAA

A function of GAM336134 is therefore inhibition of APPBP2, a GAM336134 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336134 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336134 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of BACE2, a GAM336134 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336134 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336134 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of BCHE. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336134 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336134 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of CTSB. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336134 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336134 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of CTSK. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336134 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336134 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of FHL2, a GAM336134 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336134 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336134 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of HD. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336134 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336134 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of IGF1, a GAM336134 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336134 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336134 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of IL1A, a GAM336134 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336134 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336134 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of NGB, a GAM336134 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336134 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336134 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336134 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336134 is therefore inhibition of PRND, a GAM336134 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336134 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336135 AVP TCTTGTGAAATCTGT AVP (Accession NM_000490.2) is a GAM336135 target gene. AVP A A

GGACCCT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336135 is therefore inhibition of AVP. Accordingly, utilities of GAM336135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336136 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336136 target

gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336136 is therefore inhibition of APPBP2, a GAM336136 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336136 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336136 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of BACE2, a GAM336136 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336136 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336136 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of BCHE. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with BCHE.

GAM336136 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336136 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of CTSB. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336136 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336136 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of CTSK. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336136 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336136 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of FHL2, a GAM336136 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336136 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336136 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of HD. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336136 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM336136 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of IGF1, a GAM336136 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336136 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A

TGGGCAA GAM336136 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of IL1A, a GAM336136 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336136 NGB CACTGCACTCCAGCC TGGGCAA A A

Neuroglobin (NGB, Accession NM_021257.2) is another target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of NGB, a GAM336136 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336136 PRND CACTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336136 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336136 is therefore inhibition of PRND, a GAM336136 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336137 APPBP2 CACTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336137 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336137 is therefore inhibition of APPBP2, a GAM336137 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336137 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336137 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of BACE2, a GAM336137 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336137 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336137 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of BCHE. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336137 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336137 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA

encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of CTSB. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336137 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336137 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of CTSK. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336137 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336137 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of FHL2, a GAM336137 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336137 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336137 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of HD. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336137 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336137 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of IGF1, a GAM336137 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336137 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336137 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of IL1A, a GAM336137 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336137 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336137 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of NGB, a GAM336137 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336137 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336137 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336137 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336137 is therefore inhibition of PRND, a GAM336137 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336137 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336138 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336138 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336138 is therefore inhibition of APPBP2, a GAM336138 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336138 BACE2 CACTGCACTCCAGCC TGGGCAA A A

Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336138 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of BACE2, a GAM336138 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336138 BCHE CACTGCACTCCAGCC TGGGCAA A A

BCHE (Accession NM_000055.1) is another GAM336138 target gene.

BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of BCHE. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336138 CTSB CACTGCACTCCAGCC TGGGCAA A A

CTSB (Accession NM_147782.1) is another GAM336138 target gene.

CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of CTSB. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336138 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336138 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of CTSK. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336138 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336138 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of FHL2, a GAM336138 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336138 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336138 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of HD. Accordingly, utilities of GAM336138 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336138 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336138 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of IGF1, a GAM336138 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336138 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336138 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of IL1A, a GAM336138 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336138 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336138 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence

of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of NGB, a GAM336138 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336138 PRND CACTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336138 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336138 is therefore inhibition of PRND, a GAM336138 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336139 APPBP2 CACTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336139 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336139 is therefore inhibition of APPBP2, a GAM336139 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM336139 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336139 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of BACE2, a GAM336139 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336139 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336139 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of BCHE. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336139 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336139 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of CTSB. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336139 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336139 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of CTSK. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336139 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336139 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of FHL2, a GAM336139 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336139 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336139 target gene. HD A A
TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of HD. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336139 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336139 target gene. IGF1 BINDING SITE1

and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of IGF1, a GAM336139 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336139 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336139 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of IL1A, a GAM336139 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336139 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336139 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of NGB, a GAM336139 target gene which has function in oxygen transport

and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336139 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336139 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336139 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336139 is therefore inhibition of PRND, a GAM336139 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336139 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336140 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336140 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336140 is therefore inhibition of APPBP2, a GAM336140 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336140 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336140 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of BACE2, a GAM336140 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336140 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336140 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of BCHE. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336140 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336140 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of CTSB. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336140 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336140 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of CTSK. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336140 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336140 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of FHL2, a GAM336140 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336140 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336140 target gene. HD A A
TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of HD. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336140 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336140 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure

complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of IGF1, a GAM336140 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336140 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336140 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of IL1A, a GAM336140 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336140 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336140 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of NGB, a GAM336140 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM281.

GAM336140 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336140 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336140 is therefore inhibition of PRND, a GAM336140 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336141 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336141 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336141 is therefore inhibition of APPBP2, a GAM336141 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336141 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336141 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336141 is therefore inhibition of BACE2, a GAM336141 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336141 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336141 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of BCHE. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336141 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336141 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of CTSB. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336141 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336141 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of CTSK. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336141 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336141 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of FHL2, a GAM336141 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336141 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336141 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of HD. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336141 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336141 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of IGF1, a GAM336141 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336141 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336141 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of IL1A, a GAM336141 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336141 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336141 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of NGB, a GAM336141 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336141 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336141 target gene. PRND BINDING SITE1 through PRND

BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336141 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336141 is therefore inhibition of PRND, a GAM336141 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336141 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336142 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336142 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336142 is therefore inhibition of APPBP2, a GAM336142 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336142 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336142 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336142 is therefore inhibition of BACE2, a GAM336142 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336142 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336142 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of BCHE. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336142 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336142 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of CTSB. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336142 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336142 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of CTSK. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336142 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336142 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of FHL2, a GAM336142 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336142 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336142 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of HD. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336142 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM336142 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of IGF1, a GAM336142 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM336142 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336142 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of IL1A, a GAM336142 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336142 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336142 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336142 is therefore inhibition of NGB, a GAM336142 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336142 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336142 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336142 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336142 is therefore inhibition of PRND, a GAM336142 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336142 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336143 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336143 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336143 is therefore inhibition of APPBP2, a GAM336143 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336143 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336143 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336143 is therefore inhibition of BACE2, a GAM336143 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336143 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336143 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of BCHE. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336143 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336143 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of CTSB. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336143 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336143 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of CTSK. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336143 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336143 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of FHL2, a GAM336143 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336143 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336143 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of HD. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336143 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336143 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of IGF1, a GAM336143 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336143 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336143 target gene. IL1A BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of IL1A, a GAM336143 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336143 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336143 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of NGB, a GAM336143 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336143 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336143 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336143 is therefore inhibition of PRND, a GAM336143 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336144 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336144 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336144 is therefore inhibition of APPBP2, a GAM336144 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336144 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336144 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of BACE2, a GAM336144 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336144 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336144 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of BCHE. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336144 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147782.1) is another GAM336144 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of CTSB. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336144 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336144 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of CTSK. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336144 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336144 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of

FHL2, a GAM336144 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336144 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336144 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of HD. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336144 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336144 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of IGF1, a GAM336144 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336144 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336144 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of IL1A, a GAM336144 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336144 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336144 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of NGB, a GAM336144 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336144 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336144 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336144 is therefore inhibition of PRND, a GAM336144 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336145 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336145 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336145 is therefore inhibition of APPBP2, a GAM336145 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336145 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336145 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of BACE2, a GAM336145 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336145 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336145 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of BCHE. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336145 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336145 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of CTSB. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336145 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336145 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of CTSK. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336145 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336145 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of FHL2, a GAM336145 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336145 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336145 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of HD. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336145 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336145 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of IGF1, a GAM336145 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336145 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336145 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of IL1A, a GAM336145 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation &

proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336145 NGB CACTGCACTCCAGCC TGGGCAA A A Neuroglobin (NGB, Accession NM_021257.2) is another target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of NGB, a GAM336145 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336145 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336145 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336145 is therefore inhibition of PRND, a GAM336145 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336146 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336146 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336146 is therefore inhibition of APPBP2, a GAM336146 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336146 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336146 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336146 is therefore inhibition of BACE2, a GAM336146 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336146 BCHE CACTGCACTCCAGCC TGGGCAA BCHE (Accession NM_000055.1) is another GAM336146 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336146 is therefore inhibition of BCHE. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336146 CTSB CACTGCACTCCAGCC TGGGCAA CTSB (Accession NM_147782.1) is another GAM336146 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of CTSB. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336146 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336146 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of CTSK. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336146 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336146 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of FHL2, a GAM336146 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336146 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336146 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of HD. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336146 IGF1 CACTGCACTCCAGCC TGGGCAA A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336146 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of IGF1, a GAM336146 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336146 IL1A CACTGCACTCCAGCC TGGGCAA A A Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336146 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of IL1A, a GAM336146 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM281.

GAM336146 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336146 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of NGB, a GAM336146 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336146 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336146 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336146 is therefore inhibition of PRND, a GAM336146 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336147 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336147 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336147 is therefore inhibition of APPBP2, a GAM336147 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336147 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336147 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of BACE2, a GAM336147 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336147 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336147 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of BCHE. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336147 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336147 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of CTSB. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336147 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336147 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of CTSK. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336147 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336147 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of FHL2, a GAM336147 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336147 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336147 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of HD. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336147 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336147 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of IGF1, a GAM336147 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336147 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336147 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of IL1A, a GAM336147 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336147 NGB A A CACTGCACTCCAGCC TGGGCAA Neuroglobin (NGB, Accession NM_021257.2) is another GAM336147 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of NGB, a GAM336147 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336147 PRND CACTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336147 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336147 is therefore inhibition of PRND, a GAM336147 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336148 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336148 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336148 is therefore inhibition of APPBP2, a GAM336148 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336148 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336148 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336148 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336148 is therefore inhibition of BACE2, a GAM336148 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336148 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336148 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336148 is therefore inhibition of FHL2, a GAM336148 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336148 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336148 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336148 is therefore inhibition of IGF1, a GAM336148 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336148 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336148 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336148 is therefore inhibition of MME, a GAM336148 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336148 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336148 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336148 is therefore inhibition of PRND, a GAM336148 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336149 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336149 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336149 is therefore inhibition of APPBP2, a GAM336149 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336149 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336149 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of BACE2, a GAM336149 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336149 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336149 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of BCHE. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336149 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336149 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of CTSB. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336149 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336149 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of CTSK. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336149 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336149 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of FHL2, a GAM336149 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336149 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336149 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of HD. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336149 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336149 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of IGF1, a GAM336149 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336149 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336149 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of IL1A, a GAM336149 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336149 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336149 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of NGB, a GAM336149 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336149 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336149 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336149 is therefore inhibition of PRND, a GAM336149 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336150 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336150 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336150 is therefore inhibition of APPBP2, a GAM336150 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336150 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336150 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of BACE2, a GAM336150 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336150 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336150 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of BCHE. Accordingly, utilities of GAM336150 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336150 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336150 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of CTSB. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336150 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336150 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of CTSK. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336150 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336150 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of FHL2, a GAM336150 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336150 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336150 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of HD. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336150 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336150 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of IGF1, a GAM336150 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336150 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336150 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of IL1A, a GAM336150 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336150 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336150 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of NGB, a GAM336150 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336150 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336150 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336150 is therefore inhibition of PRND, a GAM336150 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336151 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336151 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336151 is therefore inhibition of APPBP2, a GAM336151 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336151 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336151 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of BACE2, a GAM336151 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336151 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336151 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of BCHE. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336151 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336151 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites

found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of CTSB. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336151 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336151 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of CTSK. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336151 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336151 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of FHL2, a GAM336151 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336151 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336151 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of HD. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336151 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336151 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of IGF1, a GAM336151 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336151 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A
TGGGCAA GAM336151 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of IL1A, a GAM336151 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336151 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336151 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of NGB, a GAM336151 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336151 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336151 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336151 is therefore inhibition of PRND, a GAM336151 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336152 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336152 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336152 is therefore inhibition of APPBP2,

a GAM336152 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336152 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336152 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of BACE2, a GAM336152 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336152 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336152 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of BCHE. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336152 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336152 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of CTSB. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336152 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336152 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of CTSK. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336152 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336152 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of FHL2, a GAM336152 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336152 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336152 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of HD. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336152 IGF1 A A CACTGCACTCCAGCC TGGGCAA A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336152 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of IGF1, a GAM336152 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336152 IL1A A A CACTGCACTCCAGCC TGGGCAA A Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336152 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of IL1A, a GAM336152 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336152 NGB A A CACTGCACTCCAGCC TGGGCAA A Neuroglobin (NGB, Accession NM_021257.2) is another GAM336152 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of NGB, a GAM336152 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336152 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336152 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336152 is therefore inhibition of PRND, a GAM336152 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336153 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336153 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336153 is therefore inhibition of APPBP2, a GAM336153 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336153 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336153 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of BACE2, a GAM336153 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336153 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336153 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of BCHE. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336153 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336153 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of CTSB. Accordingly, utilities of GAM336153 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336153 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336153 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of CTSK. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336153 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336153 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of FHL2, a GAM336153 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336153 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336153 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of HD. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336153 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336153 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of IGF1, a GAM336153 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336153 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336153 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of IL1A, a GAM336153 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336153 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336153 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of

NGB, a GAM336153 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336153 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336153 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336153 is therefore inhibition of PRND, a GAM336153 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336154 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336154 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336154 is therefore inhibition of APPBP2, a GAM336154 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336154 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336154 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of BACE2, a GAM336154 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336154 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336154 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of BCHE. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336154 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336154 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of CTSB. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336154 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336154 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of CTSK. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336154 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336154 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of FHL2, a GAM336154 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336154 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336154 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of HD. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336154 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336154 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of IGF1, a GAM336154 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336154 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336154 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of IL1A, a GAM336154 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336154 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336154 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of NGB, a GAM336154 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336154 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336154 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336154 is therefore inhibition of PRND, a GAM336154 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336155 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336155 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336155 is therefore inhibition of APPBP2, a GAM336155 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336155 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336155 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of BACE2, a GAM336155 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336155 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336155 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of BCHE. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336155 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336155 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of CTSB. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336155 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336155 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of CTSK. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336155 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336155 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of FHL2, a GAM336155 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336155 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336155 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of HD. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336155 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336155 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of

IGF1, a GAM336155 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336155 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A TGGGCAA GAM336155 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of IL1A, a GAM336155 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336155 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336155 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of NGB, a GAM336155 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336155 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336155 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336155 is therefore inhibition of PRND, a GAM336155 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336156 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336156 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336156 is therefore inhibition of APPBP2, a GAM336156 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336156 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336156 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of BACE2, a GAM336156 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336156 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336156 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of BCHE. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336156 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336156 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of CTSB. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336156 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336156 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of CTSK. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336156 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336156 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of FHL2, a GAM336156 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336156 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336156 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of HD. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336156 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336156 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of IGF1, a GAM336156 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336156 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336156 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of IL1A, a GAM336156 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336156 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336156 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of NGB, a GAM336156 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336156 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336156 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336156 is therefore inhibition of PRND, a GAM336156 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336157 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336157 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336157 is therefore inhibition of APPBP2, a GAM336157 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336157 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336157 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of BACE2, a GAM336157 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336157 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336157 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of BCHE. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336157 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336157 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of CTSB. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336157 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336157 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of CTSK. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336157 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336157 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of FHL2, a GAM336157 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336157 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336157 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of HD. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336157 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336157 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of IGF1, a GAM336157 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336157 IL1A A A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another

TGGGCAA GAM336157 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of IL1A, a GAM336157 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336157 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336157 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of NGB, a GAM336157 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336157 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336157 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336157 is therefore inhibition of PRND, a GAM336157 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336158 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336158 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336158 is therefore inhibition of APPBP2, a GAM336158 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336158 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336158 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of BACE2, a GAM336158 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336158 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336158 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of BCHE. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336158 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147782.1) is another GAM336158 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of CTSB. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336158 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336158 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of CTSK. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336158 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336158 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of FHL2, a GAM336158 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336158 HD A A TGGGCAA CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336158 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of HD. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336158 IGF1 A A TGGGCAA CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336158 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of IGF1, a GAM336158 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336158 IL1A A A TGGGCAA CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336158 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of IL1A, a GAM336158 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336158 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336158 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of NGB, a GAM336158 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336158 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336158 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336158 is therefore inhibition of PRND, a GAM336158 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336159 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336159 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336159 is therefore inhibition of APPBP2, a GAM336159 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336159 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336159 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of BACE2, a GAM336159 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336159 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336159 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of BCHE. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336159 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336159 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of CTSB. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336159 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336159 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of CTSK. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336159 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336159 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of FHL2, a GAM336159 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336159 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336159 target gene.
HD A A
TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of HD. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336159 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336159 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of IGF1, a GAM336159 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336159 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A
TGGGCAA GAM336159 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of IL1A, a GAM336159 target gene which stimulates thymocyte

proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336159 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336159 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of NGB, a GAM336159 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336159 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336159 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336159 is therefore inhibition of PRND, a GAM336159 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336160 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336160 target gene. APPBP2 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336160 is therefore inhibition of APPBP2, a GAM336160 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336160 BACE2 CACTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336160 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of BACE2, a GAM336160 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336160 BCHE CACTGCACTCCAGCC A A TGGGCAA BCHE (Accession NM_000055.1) is another GAM336160 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of BCHE. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336160 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336160 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of CTSB. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336160 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336160 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of CTSK. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336160 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336160 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of FHL2, a GAM336160 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336160 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336160 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of HD. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336160 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336160 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of IGF1, a GAM336160 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336160 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336160 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of IL1A, a GAM336160 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336160 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336160 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of NGB, a GAM336160 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336160 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336160 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336160 is therefore inhibition of PRND, a GAM336160 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336161 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336161 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336161 is therefore inhibition of APPBP2, a GAM336161 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336161 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336161 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of BACE2, a GAM336161 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336161 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336161 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of BCHE. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336161 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336161 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of CTSB. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336161 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336161 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of CTSK. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336161 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336161 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of FHL2, a GAM336161 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336161 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336161 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of HD. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336161 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336161 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of IGF1, a GAM336161 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336161 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336161 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of IL1A, a GAM336161 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336161 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336161 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of NGB, a GAM336161 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336161 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336161 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336161 is therefore inhibition of PRND, a GAM336161 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336162 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336162 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336162 is therefore inhibition of APPBP2, a GAM336162 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336162 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336162 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of BACE2, a GAM336162 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336162 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336162 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of BCHE. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336162 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336162 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of CTSB. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336162 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336162 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of CTSK. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336162 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336162 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of FHL2, a GAM336162 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336162 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336162 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of HD. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with HD.

GAM336162 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336162 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of IGF1, a GAM336162 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336162 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336162 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of IL1A, a GAM336162 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336162 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336162 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336162 is therefore inhibition of NGB, a GAM336162 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336162 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336162 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336162 is therefore inhibition of PRND, a GAM336162 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336163 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336163 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336163 is therefore inhibition of APPBP2, a GAM336163 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336163 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336163 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of BACE2, a GAM336163 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336163 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336163 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of BCHE. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336163 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336163 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of CTSB. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336163 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336163 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of CTSK. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336163 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336163 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of FHL2, a GAM336163 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336163 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336163 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of HD. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336163 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336163 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of IGF1, a GAM336163 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336163 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336163 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of IL1A, a GAM336163 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336163 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336163 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of NGB, a GAM336163 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336163 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336163 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336163 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336163 is therefore inhibition of PRND, a GAM336163 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336163 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336164 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336164 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336164 is therefore inhibition of APPBP2, a GAM336164 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336164 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336164 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of BACE2, a GAM336164 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336164 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336164 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of BCHE. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336164 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336164 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of CTSB. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336164 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336164 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of CTSK. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336164 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336164 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of FHL2, a GAM336164 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336164 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336164 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of HD. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336164 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336164 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of IGF1, a GAM336164 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336164 IL1A CACTGCACTCCAGCC A A TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336164 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of IL1A, a GAM336164 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336164 NGB CACTGCACTCCAGCC A A TGGGCAA Neuroglobin (NGB, Accession NM_021257.2) is another GAM336164 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of NGB, a GAM336164 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336164 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336164 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336164 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336164 is therefore inhibition of PRND, a GAM336164 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336164 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336165 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336165 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336165 is therefore inhibition of APPBP2, a GAM336165 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336165 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336165 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of BACE2, a GAM336165 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336165 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336165 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of BCHE. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336165 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336165 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of CTSB. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336165 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336165 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of CTSK. Accordingly, utilities of GAM336165 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336165 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336165 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of FHL2, a GAM336165 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336165 HD HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336165 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of HD. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336165 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336165 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of IGF1, a GAM336165 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336165 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336165 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of IL1A, a GAM336165 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336165 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336165 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of NGB, a GAM336165 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336165 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336165 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336165 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336165 is therefore inhibition of PRND, a GAM336165 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336165 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336166 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336166 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336166 is therefore inhibition of APPBP2, a GAM336166 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336166 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336166 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of BACE2, a GAM336166 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336166 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336166 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of BCHE. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336166 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336166 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of CTSB. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336166 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336166 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of CTSK. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336166 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336166 target gene. FHL2 BINDING SITE1 and FHL2 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of FHL2, a GAM336166 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336166 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336166 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of HD. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336166 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336166 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of IGF1, a GAM336166 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM336166 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336166 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of IL1A, a GAM336166 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336166 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336166 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of NGB, a GAM336166 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336166 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336166 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336166 is therefore inhibition of PRND, a GAM336166 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336167 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336167 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336167 is therefore inhibition of APPBP2, a GAM336167 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336167 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336167 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of BACE2, a GAM336167 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336167 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336167 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of BCHE. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336167 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336167 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of CTSB. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336167 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336167 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of CTSK. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336167 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336167 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336167 is therefore inhibition of FHL2, a GAM336167 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336167 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336167 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of HD. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336167 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336167 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of IGF1, a GAM336167 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336167 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336167 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of IL1A, a GAM336167 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336167 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336167 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of NGB, a GAM336167 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336167 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336167 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336167 is therefore inhibition of PRND, a GAM336167 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336168 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336168 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336168 is therefore inhibition of APPBP2, a GAM336168 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336168 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336168 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of BACE2, a GAM336168 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336168 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336168 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of BCHE. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336168 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147780.1) is another GAM336168 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of CTSB. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336168 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336168 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of CTSK. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336168 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336168 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of FHL2, a GAM336168 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336168 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336168 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of HD. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336168 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336168 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of IGF1, a GAM336168 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336168 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336168 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of IL1A, a GAM336168 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336168 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336168 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of NGB, a GAM336168 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336168 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336168 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336168 is therefore inhibition of PRND, a GAM336168 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336169 BLMH ACATGATCTCCTCAC Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is a A A

TCTAGGA GAM336169 target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336169 is therefore inhibition of BLMH, a GAM336169 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM336169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM336169 GSK3B ACATGATCTCCTCAC Glycogen Synthase Kinase 3 Beta (GSK3B, Accession NM_002093.2) A A
TCTAGGA is another GAM336169 target gene. GSK3B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GSK3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GSK3B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336169 is therefore inhibition of GSK3B, a GAM336169 target gene which b subunit of glycogen synthase kinase 3 which phosphorylates regulatory proteins. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GSK3B.The function of GSK3B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2027.

GAM336169 MAPT ACATGATCTCCTCAC Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM336169 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336169 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A
TCTAGGA

Another function of GAM336169 is therefore inhibition of MAPT, a GAM336169 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336169 PSEN2 ACATGATCTCCTCAC PSEN2 (Accession NM_012486.1) is another GAM336169 target gene. A A

TCTAGGA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336169 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336170 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336170 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336170 is therefore inhibition of APPBP2, a GAM336170 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336170 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336170 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of

BACE2, a GAM336170 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336170 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336170 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of BCHE. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336170 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336170 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of CTSB. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336170 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336170 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of CTSK. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with CTSK.

GAM336170 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336170 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of FHL2, a GAM336170 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336170 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336170 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of HD. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336170 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336170 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of IGF1, a GAM336170 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336170 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336170 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of IL1A, a GAM336170 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336170 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336170 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of NGB, a GAM336170 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336170 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336170 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336170 is therefore inhibition of PRND, a GAM336170 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336171 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336171 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336171 is therefore inhibition of APPBP2, a GAM336171 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336171 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336171 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of BACE2, a GAM336171 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336171 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336171 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of BCHE. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336171 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336171 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of CTSB. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336171 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336171 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of CTSK. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336171 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336171 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of FHL2, a GAM336171 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336171 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336171 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of HD. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336171 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336171 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of IGF1, a GAM336171 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336171 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336171 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of IL1A, a GAM336171 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336171 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336171 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of NGB, a GAM336171 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336171 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336171 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336171 is therefore inhibition of PRND, a GAM336171 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336172 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336172 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336172 is therefore inhibition of APPBP2, a GAM336172 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336172 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336172 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of BACE2, a GAM336172 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336172 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336172 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of BCHE. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336172 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336172 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of CTSB. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336172 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336172 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of CTSK. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336172 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336172 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336172 is therefore inhibition of FHL2, a GAM336172 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336172 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336172 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of HD. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336172 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336172 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of IGF1, a GAM336172 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336172 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336172 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of IL1A, a GAM336172 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336172 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336172 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of NGB, a GAM336172 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336172 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336172 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336172 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336172 is therefore inhibition of PRND, a GAM336172 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336173 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336173 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336173 is therefore inhibition of APPBP2, a GAM336173 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336173 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336173 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of BACE2, a GAM336173 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336173 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336173 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of BCHE. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336173 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336173 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of CTSB. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336173 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336173 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of CTSK. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336173 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336173 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of FHL2, a GAM336173 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336173 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336173 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of HD. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336173 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336173 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of IGF1, a GAM336173 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336173 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336173 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of IL1A, a GAM336173 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336173 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336173 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of NGB, a GAM336173 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336173 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336173 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336173 is therefore inhibition of PRND, a GAM336173 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336174 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336174 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336174 is therefore inhibition of APPBP2, a GAM336174 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336174 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336174 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of BACE2, a GAM336174 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336174 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336174 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of BCHE. Accordingly, utilities of GAM336174 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336174 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336174 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of CTSB. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336174 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336174 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of CTSK. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336174 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336174 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of FHL2, a GAM336174 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336174 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336174 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of HD. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336174 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336174 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of IGF1, a GAM336174 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336174 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336174 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of IL1A, a GAM336174 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336174 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336174 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of NGB, a GAM336174 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336174 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336174 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336174 is therefore inhibition of PRND, a GAM336174 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336175 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336175 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336175 is therefore inhibition of APPBP2, a GAM336175 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336175 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336175 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of BACE2, a GAM336175 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336175 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336175 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of BCHE. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336175 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336175 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites

found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of CTSB. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336175 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336175 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of CTSK. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336175 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336175 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of FHL2, a GAM336175 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336175 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336175 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of HD. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336175 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336175 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of IGF1, a GAM336175 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336175 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A
TGGGCAA GAM336175 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of IL1A, a GAM336175 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336175 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336175 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of NGB, a GAM336175 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336175 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336175 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336175 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336175 is therefore inhibition of PRND, a GAM336175 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336175 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336176 AVP TCTTGTGAAATCTGT AVP (Accession NM_000490.2) is a GAM336176 target gene. AVP A A
GGACCCT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336176 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336176 is therefore inhibition of AVP. Accordingly, utilities of GAM336176 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with AVP.

GAM336177 BLMH ACATGATCTCCTCAC Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is a A A

TCTAGGA GAM336177 target gene. BLMH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336177 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336177 is therefore inhibition of BLMH, a GAM336177 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM336177 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM336177 GSK3B ACATGATCTCCTCAC Glycogen Synthase Kinase 3 Beta (GSK3B, Accession NM_002093.2) A A

TCTAGGA is another GAM336177 target gene. GSK3B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GSK3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GSK3B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336177 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336177 is therefore inhibition of GSK3B, a GAM336177 target gene which b subunit of glycogen synthase kinase 3 which phosphorylates regulatory proteins. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336177 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GSK3B.The function of GSK3B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2027.

GAM336177 MAPT ACATGATCTCCTCAC Microtubule- associated Protein Tau (MAPT, Accession A A

TCTAGGA NM_173727.1) is another GAM336177 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336177 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336177 is therefore inhibition of MAPT, a GAM336177 target gene which Microtubule- associated protein

tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336177 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336177 PSEN2 ACATGATCTCCTCAC PSEN2 (Accession NM_012486.1) is another GAM336177 target gene. A A

TCTAGGA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336177 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336177 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336177 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336178 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336178 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336178 is therefore inhibition of APPBP2, a GAM336178 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336178 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336178 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336178 is therefore inhibition of BACE2, a GAM336178 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336178 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336178 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of BCHE. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336178 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336178 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of CTSB. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336178 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336178 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of CTSK. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336178 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336178 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of FHL2, a GAM336178 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336178 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336178 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of HD. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336178 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336178 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of IGF1, a GAM336178 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336178 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336178 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of IL1A, a GAM336178 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336178 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336178 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of NGB, a GAM336178 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336178 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336178 target gene. PRND BINDING SITE1 through PRND

BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336178 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336178 is therefore inhibition of PRND, a GAM336178 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336178 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336179 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336179 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336179 is therefore inhibition of APPBP2, a GAM336179 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336179 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336179 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336179 is therefore inhibition of BACE2, a GAM336179 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336179 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336179 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of BCHE. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336179 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336179 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of CTSB. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336179 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336179 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of CTSK. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336179 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336179 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of FHL2, a GAM336179 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336179 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336179 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of HD. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336179 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM336179 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of IGF1, a GAM336179 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM336179 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336179 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of IL1A, a GAM336179 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336179 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336179 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336179 is therefore inhibition of NGB, a GAM336179 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336179 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336179 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336179 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM336179 is therefore inhibition of PRND, a GAM336179 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336180 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336180 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336180 is therefore inhibition of APPBP2, a GAM336180 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336180 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336180 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of BACE2, a GAM336180 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336180 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336180 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of BCHE. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336180 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336180 target gene. A A
TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of CTSB. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336180 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336180 target gene. A A
TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of CTSK. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336180 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM336180 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of FHL2, a GAM336180 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336180 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336180 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of HD. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336180 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336180 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of IGF1, a GAM336180 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336180 IL1A A A CACTGCACTCCAGCC TGGGCAA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another GAM336180 target gene. IL1A BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of IL1A, a GAM336180 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336180 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336180 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of NGB, a GAM336180 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336180 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336180 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336180 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336180 is therefore inhibition of PRND, a GAM336180 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM336180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336181 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336181 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336181 is therefore inhibition of APPBP2, a GAM336181 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336181 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336181 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of BACE2, a GAM336181 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336181 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336181 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of BCHE. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336181 CTSB CACTGCACTCCAGCC A A TGGGCAA CTSB (Accession NM_147782.1) is another GAM336181 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of CTSB. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336181 CTSK CACTGCACTCCAGCC A A TGGGCAA CTSK (Accession NM_000396.2) is another GAM336181 target gene. CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of CTSK. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336181 FHL2 CACTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336181 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of

FHL2, a GAM336181 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336181 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336181 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of HD. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336181 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336181 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of IGF1, a GAM336181 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336181 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336181 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of IL1A, a GAM336181 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336181 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336181 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of NGB, a GAM336181 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336181 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM336181 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336181 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336181 is therefore inhibition of PRND, a GAM336181 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336182 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336182 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336182 is therefore inhibition of APPBP2, a GAM336182 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336182 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336182 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of BACE2, a GAM336182 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336182 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336182 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of BCHE. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336182 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336182 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of CTSB. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336182 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336182 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of CTSK. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336182 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336182 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of FHL2, a GAM336182 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336182 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336182 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of HD. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336182 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336182 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of IGF1, a GAM336182 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336182 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336182 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of IL1A, a GAM336182 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation &

proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336182 NGB CACTGCACTCCAGCC TGGGCAA A A

Neuroglobin (NGB, Accession NM_021257.2) is another target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of NGB, a GAM336182 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336182 PRND CACTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336182 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336182 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336182 is therefore inhibition of PRND, a GAM336182 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336182 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336183 APPBP2 CACTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336183 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336183 is therefore inhibition of APPBP2, a GAM336183 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336183 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138991.1) is another GAM336183 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of BACE2, a GAM336183 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336183 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336183 target gene. A A
TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of BCHE. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336183 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336183 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of CTSB. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336183 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336183 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of CTSK. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336183 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336183 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of FHL2, a GAM336183 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336183 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336183 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of HD. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336183 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336183 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of IGF1, a GAM336183 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336183 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A
TGGGCAA GAM336183 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of IL1A, a GAM336183 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM281.

GAM336183 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336183 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of NGB, a GAM336183 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336183 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336183 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336183 is therefore inhibition of PRND, a GAM336183 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336184 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336184 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336184 is therefore inhibition of APPBP2, a GAM336184 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336184 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336184 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of BACE2, a GAM336184 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336184 BCHE CACTGCACTCCAGCC TGGGCAA A A BCHE (Accession NM_000055.1) is another GAM336184 target gene. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of BCHE. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336184 CTSB CACTGCACTCCAGCC TGGGCAA A A CTSB (Accession NM_147782.1) is another GAM336184 target gene. CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of CTSB. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336184 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336184 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of CTSK. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336184 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336184 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of FHL2, a GAM336184 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336184 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336184 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of HD. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336184 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336184 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of IGF1, a GAM336184 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336184 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336184 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of IL1A, a GAM336184 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336184 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336184 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of NGB, a GAM336184 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336184 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336184 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336184 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336184 is therefore inhibition of PRND, a GAM336184 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336185 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336185 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336185 is therefore inhibition of APPBP2, a GAM336185 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336185 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336185 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of BACE2, a GAM336185 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336185 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336185 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of BCHE. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336185 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336185 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of

CTSB. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336185 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336185 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of CTSK. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336185 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336185 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of FHL2, a GAM336185 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336185 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336185 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of HD. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336185 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336185 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of IGF1, a GAM336185 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336185 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336185 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of IL1A, a GAM336185 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336185 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336185 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of NGB, a GAM336185 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336185 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336185 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336185 is therefore inhibition of PRND, a GAM336185 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336186 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336186 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336186 is therefore inhibition of APPBP2, a GAM336186 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336186 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336186 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336186 is therefore inhibition of BACE2, a GAM336186 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336186 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336186 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336186 is therefore inhibition of FHL2, a GAM336186 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336186 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336186 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336186 is therefore inhibition of IGF1, a GAM336186 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336186 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336186 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336186 is therefore inhibition of MME, a GAM336186 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336186 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336186 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336186 is therefore inhibition of PRND, a GAM336186 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336187 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336187 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336187 is therefore inhibition of APPBP2, a GAM336187 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336187 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336187 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of BACE2, a GAM336187 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336187 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336187 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of BCHE. Accordingly, utilities of GAM336187 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336187 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336187 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of CTSB. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336187 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336187 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of CTSK. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336187 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336187 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of FHL2, a GAM336187 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336187 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336187 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of HD. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336187 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336187 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of IGF1, a GAM336187 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336187 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336187 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of IL1A, a GAM336187 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336187 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336187 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of NGB, a GAM336187 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336187 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336187 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336187 is therefore inhibition of PRND, a GAM336187 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336188 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336188 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336188 is therefore inhibition of APPBP2, a GAM336188 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336188 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336188 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of BACE2, a GAM336188 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336188 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336188 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of BCHE. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336188 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336188 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites

found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of CTSB. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336188 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336188 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of CTSK. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336188 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336188 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of FHL2, a GAM336188 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336188 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336188 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of HD. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336188 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM336188 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of IGF1, a GAM336188 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336188 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A
A
TGGGCAA GAM336188 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of IL1A, a GAM336188 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336188 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336188 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of NGB, a GAM336188 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336188 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336188 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336188 is therefore inhibition of PRND, a GAM336188 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336189 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336189 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336189 is therefore inhibition of APPBP2,

a GAM336189 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336189 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336189 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of BACE2, a GAM336189 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336189 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336189 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of BCHE. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336189 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336189 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of CTSB. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336189 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336189 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of CTSK. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336189 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336189 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of FHL2, a GAM336189 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336189 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336189 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of HD. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336189 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM336189 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of IGF1, a GAM336189 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336189 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGGGCAA GAM336189 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of IL1A, a GAM336189 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336189 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336189 A A
TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of NGB, a GAM336189 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336189 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336189 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336189 is therefore inhibition of PRND, a GAM336189 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336190 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336190 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336190 is therefore inhibition of APPBP2, a GAM336190 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336190 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336190 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of BACE2, a GAM336190 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336190 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336190 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of BCHE. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336190 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336190 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of CTSB. Accordingly, utilities of GAM336190 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336190 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336190 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of CTSK. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336190 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336190 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of FHL2, a GAM336190 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336190 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336190 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of HD. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336190 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336190 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of IGF1, a GAM336190 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336190 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336190 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of IL1A, a GAM336190 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336190 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336190 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336190 is therefore inhibition of

NGB, a GAM336190 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336190 PRND CACTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336190 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336190 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336190 is therefore inhibition of PRND, a GAM336190 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336191 APPBP2 CACTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336191 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336191 is therefore inhibition of APPBP2, a GAM336191 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336191 BACE2 CACTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336191 target gene. BACE2 BINDING SITE is A A

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of BACE2, a GAM336191 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336191 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336191 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of BCHE. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336191 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147780.1) is another GAM336191 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of CTSB. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336191 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336191 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of CTSK. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336191 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336191 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of FHL2, a GAM336191 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336191 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336191 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of HD. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336191 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336191 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of IGF1, a GAM336191 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336191 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336191 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of IL1A, a GAM336191 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336191 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336191 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of NGB, a GAM336191 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336191 PRND CACTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336191 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336191 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336191 is therefore inhibition of PRND, a GAM336191 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336192 APPBP2 CACTGCACTCCAGCC TGGGCAA A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336192 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336192 is therefore inhibition of APPBP2, a GAM336192 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336192 BACE2 CACTGCACTCCAGCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM336192 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of BACE2, a GAM336192 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336192 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336192 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of BCHE. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336192 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336192 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of CTSB. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336192 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336192 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of CTSK. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336192 FHL2 A A CACTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336192 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of FHL2, a GAM336192 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336192 HD A A CACTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336192 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of HD. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336192 IGF1 A A CACTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336192 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of

IGF1, a GAM336192 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336192 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A TGGGCAA GAM336192 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of IL1A, a GAM336192 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336192 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336192 A A TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of NGB, a GAM336192 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336192 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336192 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336192 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336192 is therefore inhibition of PRND, a GAM336192 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336193 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336193 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336193 is therefore inhibition of APPBP2, a GAM336193 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336193 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336193 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of BACE2, a GAM336193 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336193 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336193 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of BCHE. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336193 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336193 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of CTSB. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336193 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336193 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of CTSK. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336193 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336193 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of FHL2, a GAM336193 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336193 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336193 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of HD. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336193 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336193 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of IGF1, a GAM336193 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336193 IL1A CACTGCACTCCAGCC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TGGGCAA GAM336193 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of IL1A, a GAM336193 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336193 NGB CACTGCACTCCAGCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336193 A A

TGGGCAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of NGB, a GAM336193 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336193 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336193 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336193 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336193 is therefore inhibition of PRND, a GAM336193 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336193 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336194 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336194 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336194 is therefore inhibition of APPBP2, a GAM336194 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336194 BACE2 CACTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138991.1) is another GAM336194 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of BACE2, a GAM336194 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336194 BCHE CACTGCACTCCAGCC BCHE (Accession NM_000055.1) is another GAM336194 target gene. A A

TGGGCAA BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of BCHE. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM336194 CTSB CACTGCACTCCAGCC CTSB (Accession NM_147782.1) is another GAM336194 target gene. A A

TGGGCAA CTSB BINDING SITE1 and CTSB BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CTSB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE1 and CTSB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of CTSB. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM336194 CTSK CACTGCACTCCAGCC CTSK (Accession NM_000396.2) is another GAM336194 target gene. A A

TGGGCAA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of CTSK. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336194 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336194 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336194 is therefore inhibition of FHL2, a GAM336194 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336194 HD CACTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336194 target gene. HD A A
